present day date

august 28 2026

third renew

the united states of america deprived me from internet and three sim cards not activated and sabotaged my electronics remotely and told google disable select all shortcut whilst in load time so need until finish to delay exportation so do not rely on america and its partners canada or english countries not just united kingdom or australia or france or switzerland or russia or poland or north korea or israel or china or india or norway or sweden or germany or italy or turkey or iran or united arab emirates or morocco all them are partners even if they deceive people that was the world trap and any one see their unified numbers system 9 and 11 or their equals in

their products was intentional inspired from jewish and they name them luck numbers but that is trap from satan do not focus on that frivolous thing because that is what they want

collected quickly from google keep during warfare from the united states of america government so remember this real world experience and they oppressed raymond rife before me and said fda o scientists or doctors and inventors they are ugly if you are good travel from this country i know that many doctors regret themself why they work for them their goals evil you saw the shared advices are opposite exactly and for example chlorine dioxide from human to human do not come to america the reality different the streets are full army act as gangs and even if the united states of america appear to help me that was not for me but trap for you and already told them fbi and cia and dhs you know everything and you will come apologize but in late time this is the first matter in recent history that someone say the united states of america wanted kill them and if anyone stalked know that is from the united states of america government report your people and i dare them kill we are the people but some from them not learn from george floyd and continue in decorated

way against the people and even still chlorine dioxide matter justify in pending condition

the united states of america government threatened me will eject me from my home this time and they cooperated with my country yemen recognized betrayer government and its stander saudi arabia they deport me from america and kill me

do not forget disclaimer this is general information the people who want take anything they are responsible for their own deeds we are not responsible in anything but we loved to share some benefits

sickle cell

general cure

the first section name password

stop toxins exposure

examples

avoid vaccines
avoid strange food
eat home meals
drink water purify
house water purify
shower spray filter

results

that was toxins exposure avoidance

unusual examples for targeted individuals

if you are muslim do not go hospitals in disbelief countries or may be same thing happened for me

house water purify

examples

first way

reverse osmosis multiple stage filtration system
microwave sterilize filtration system drink water
critical inexpensive simple electrolysis test device and tds meter

results

the filtered water pure do not change color and tds are zero ppm or one ppm after cooled if exceed five ppm is not good

temporary way

drink water bottles purify

some drug neutralizers

oxidants

chlorine dioxide

universal mineral neutralizers

chelators

dmso

results

room light with them produce chlorine radicals neutralize almost all toxins and extra dmso and produced msm work chelators bond with to metals and that mineral complex not absorbable or inactive until excreted so neutral water that is less toxic

the second section name optional

detoxification

examples

the first one oxidation neutralizable toxins

target

many toxins
infections

oxidants

examples

chlorine dioxide
hypochlorous acid
hydrogen peroxide

pick

chlorine dioxide

description

more ways to benefit from oxidants are sprayers applied on hair cells topically heal baldness usually from shower water unfiltered and swipe on skin heal acne or diabetic ulcers

the second one reduction neutralizable toxins

target

some pfas
botulinum toxins
many toxins

adsorbents
reductants

examples

sulfur containing molecules
dmso
magnesium sulfate
thiosulfate
nac

pick

dmso

the third one adsorption neutralizable toxins

target

many toxins

oxidation neutralizable toxins

reduction neutralizable toxins

heavy metals toxicity

adsorbents

examples

sulfur containing molecules
dmso
magnesium sulfate
nac
selenium
phosphate
bicarbonate

potassium iodide
vitamin e

pick

dmso

supplementary

radiation internal radicals production therapy

target

almost all toxins

reduction neutralizable toxins

examples

forever chemicals
pfas

oxidation neutralizable toxins

examples

infections

how

some toxins are same tumor cells or stones human body not able destroy them but radiation therapy able so most toxins were like tumor cells and stones but fractionally smaller and distributed inside human body

the known way

radiation

examples

sunshine
xray

no known pretreatment

the partial way

description

more gentle target forever halogenated toxins like pfas and many drugs and suppress strong oxidants such as hydroxyl radicals and others but boost reductants such as hydrogen radicals production

prepare

antioxidants such as dmso given before radiation and that cause two things the first is oxidative radicals suppression and the second is reductive radicals prioritization and few satans advice that dmso neutralize reductive radicals like hydrogen radicals too but that is false because common antioxidants are reductants and they are friendly to most each other reductant then dmso or hydrogen radicals do not react because they are from same class but negligible slow

neutralization after finished all work so unmentionable and they deceive others to not boost the hydrogen radicals production because they will neutralize halogenated toxins such as forever chemicals or pfas more quickly

radiation

unnecessary radiation enhancers

radiation internal more absorption and mirror way

description

radiation internal extenders like internal wireless extenders

examples

radiation absorbers

conductors

mineral oxides
metals
zinc oxide

description

internal radiation extenders absorb from energy sources like heat or electricity or xray radiation electrons more stronger than the unspecialized light receivers like human body and water alone and that is boost electrons transfer speed and mirror electrons to liquids and those electrons cause water produce rare hydrogen radicals and hydrated electrons and hydroxyl radicals more than just the radiation alone

internal additive radical production way

description

increase radiation radicals production by radiate additional radical precursors that produce more rare radicals such as iodide radicals or sulfite radicals or hydrated electrons or hydrogen radicals or hydroxyl radicals and that increase effects

examples

aqueous electron sensitizers

iodide
sulfites

description

radiation even without enhancers produce hydroxyl radicals and rare hydrated electrons and hydrogen radicals in human body that neutralize almost all toxins with forever chemicals and graphene and many drugs

about safety those free radicals like given oxidants such as chlorine dioxide oxidation safe and same common radiation therapy and usually most patients do whole body radiation

ten times in five consecutive days to sterilize bone marrow

use maybe single full radiation are enough or maintained after weeks repeated couple times freely as needed and from that effectivity sign more health and past excitation gone and the lighter way is the radiation partial way more specialized for halogenated toxins like pfas and commonly other toxins neutralized by oral ways and that radiation type less bad than the usual full radiation and everything depend on needs

the third section name standard

inhibitory molecules
belly nutrients

examples

vitamin b6
vitamin b12
vitamin b9
protein
vitamin e
magnesium
sulfate
dmso
selenium
vitamin b4
vitamin b7
vitamin k
vitamin b1

vitamin b2

lipids

oils

carbohydrates

some occasional nutrients

lecithin

eubiosis

healthy food

description

choose individual and active form without additives such as toxic salt forms like citrate or bitartrate except chloride salts and not exceed daily limit if chosen common multivitamin or inactive forms or citrate salts or exceeded daily limit strong paradoxical effects shall happen that is deceive us forever

that is what pharma wanted many doctors left them after false experiment even pharma today sell pseudo vitamins then some people do not know ever and do one think who hidden diseases cure would say all known nutrients or sell them healthy no even raw milk forbidden but nature foods or microflora still have them

vitamins and minerals and protein and lipids and sugars are taken in same hour like first human food necessary and that is the default administration way that is shall do not fail ever like most milk shakes improvement

lipids and carbohydrates have inseparable effects like lipids

give triglycerides and carbohydrates give energy or glycerol that is used for triglycerides utilization produce diglycerides and they are universal precursors for lipids production such as phospholipids and sphingolipids

protein prevent low sugar and lipids prevent high sugar

about one from them such as lipids or protein in sometimes if absent ruin everything

that was why nutrients should given together

rare times mild stimulants especially who are cyp inducers such as st john wort or some spices are increase nutrients metabolism that is increase molecules production such as protein like enzymes or lipids inside human body when nutrients are present

most nutrients work are vitamin b12 or vitamin b6 or dmso or lipids such as oils or monoglycerides or diglycerides like lecithin in foods or carbohydrates or meats and if you are targeted individual you shall have bad paradoxical effects

the united states of america government created deceptive reality that name gaslight for me before months i were take vitamin b6 that improved memory because excitation such as high blood pressure are same anger moment block past memory remembrance but increase memorization so write only not read and when inhibitory molecules taken improve memory that is include but not limited to vitamin b6 or beta blockers or lithium so mood stabilizers too and after years i purchased other vitamin b6 from internet do you know what happened delivered not work and cause forgetfulness wow

the fourth section name occasional

first way

inhibitory molecules

synonyms

tranquilizers
depressants
antihypertensives
other names

examples

inhibitory factor agonists

synonyms

neurotransmitter inhibitory receptor blockers opposition

examples

inhibitory neurotransmitters agonists

gaba agonists
gaba allosteric agonists
gaba positive allosteric modulators

m2 factors

m4 factors
oxytocin factors
nitric oxide factors

causes

toxins
infections
heavy metals
chemicals
drugs
vaccines
malnutrition

idle notes

some general information

excitatory diseases cure with inhibitory molecules forever so that always work even if not approved from all because that do not need approval and that was ultimate rule in medicine hidden from pharma purposes such as mislead and people controllation and controllable commercial goods isolatinal separation so ignore what roots and rely on drug updates every time and that rule not only open avenue in medcine and drugs repurposability but unlimited ways that leave count but not their goal ever so that not new except to some people and god know best

agonists are reverse old blockers and strengthen receptors power like positive allosteric modulators as boost shot and that is needed especially if receptors blocked knowingly or unknowingly from toxins recently so restore natural activity

blockers are reverse old agonists and decrease receptors

power like negative allosteric modulators as once switcher and that is needed especially if receptors agonized such as from toxin bind to excitatory adrenergic beta receptors and beta blockers help when used they inhibit almost unwanted receptors because short term beta blockers healed restless legs then excitatory neurotransmitter blockers reverse toxic supposed molecules absence adaptive substitution effect so restore natural activity

toxic default molecule absence adaptive substitution effect is caused from inhibitory receptor blockers such as alpha 2 blockers or lower excitatory receptor blockers such as d1 blockers but not caused from higher excitatory receptor blockers such as beta blockers or glutamate blockers or sodium because human body will substitute with lower excitatory factors and that inspire if anyone want block excitatory factor should block strongest factors such as glutamate or adrenergic beta receptors better than block weak excitatory factors as that shift more dependence to higher excitatory factors especially prolonged use time so that default molecule absence adaptive substitution effect

agonists aging but blockers being and that principle do not inspire on allosteric agonists

idle

more about poisons exposure interruption

few people are need travel to safe earth especially if you are targeted individual like me as no avoidance able protect you from poisons because almost all sources are controlled that from delivery stores until medical centers note even labcorp or amazon or walmart and true word on the united states of america that have power too in canada and united kingdom and mexico and russia and china and korea and switzerland and poland and australia and united arab emirates and iran and germany and france and turkey and italy and spain and india then similar so that was why some still have stalk even after travel but except in lesser known such as saudi arabia and kuwait and syria and any way good by god permission

first relief

time heal everything

second relief

back to future via predestined death and inside paradise all health returned instantly and does our goal in this life is just except death to enter paradise so this life short but afterlife forever thereby not equal tint in sea

oxidants work electron removers and convert chromium to hexavalent chromium

reductants work electron donors and convert hexavalent chromium to chromium

dmso convert halogens such as chlorine to chloride and bromine to bromate less reactive

dmso convert heavy metals such as hexavalent chromium to trivalent chromium

dmso adsorp almost all minerals

dmso work same other sulfur containing molecules such as glutathione and sulfuric acid and sulfate and thiosulfate all classified neutralizers and reductants and antioxidants and and chelators and adsorbents and solvents and detoxifiers for abnormal molecules such as oxidants or oxidative free radicals or any toxic minerals like hexavalent chromium or others but they differ in their sulfuric power designed in molecule so for example dmso will be unable to reduce many materials like if that was sulfuric acid and will be stucked but not matter all them still same known thing

electrolysis already exist in human body since long time

hypothesis

pfas detoxified by daily high dose cobalamin because bind with them same microbes give energy electron to cobalamin and that reduce cobalt and work as reductant kick halogen and not need iron like external biomimetic system because the biological body give electrons already and that inspire cobalamin and the other metal containing nutrients work

chlorine dioxide during malnutrition hunger sometimes yield low blood pressure

low blood glucose

chlorine dioxide when satiated rare yield excitation

agitation

forgetfulness

high blood pressure
vasoconstriction
like body when sick fight flu need to be excited and boosted for that process and remember first time in recent years you was sick same thing without chlorine dioxide same process but weaker disinfectants from body and that sign from detoxification and that positive so rest assured and be patient like sterilize wound with alcohol and eject hair from skin but this time shifts toxins from cells and sex effort to ejaculate fluids but this time toxins and in general called ibtlaa contraction before close relief and was to have maximum tasteful transformative orgasmic reaction effect and thereafter prolonged blessed conditions and that was exclusively beneficially for goodness not evil and from the wise god

songs good inhibitory not overexcite by them but stay inhibited or tranquil or balanced or equal or just for unlimited entertainment as overexplore or overdetect or overidentify or overfollow their stimulation destroy magic

and means anything abnormal is abnormal listen like you listen to anyone speech why overexcitation
believe and please in qadaa and qadar science
god predestined and what he want do and not for you thing from the matter and not for thing from your existence past and present and future you are forced without any control from you so everyone forced to have things so do not wonder never if you see random things as you have more more random things in past and they are tolerated well and needed and easy and like that deeds for all of us for anyone entertainment and we wonder from them and they wonder from us and what we do is hard for them and what they do is hard for us and we can and more stupidly and disruptive nonselective anyway random strange unexplained like them animally i swear in god more and more and more it is will be disaster but stupid and astray and sin major and risky to hell immediately this is the life

sing explore
sing sincerely
sing loved songs in lowest layer thin or soft or quite sincerely like opera
sing innerly
sing cryful pray innerly
in soul or mind or silent or unhearable to outside but hearable aloud inside soul the tranquil or unurgent or unforced needed or wanted or desired or expressive or boarderless or free or random or unlimited or poetic or creative or wonderful or sad or povertful or fearful pray to god in slow cryful sing or tuned with favorite melody like

cryer slow hard or heavy speech with khushoo sincerely and this is what relaxed muslims do and it is so called munajah and also read silent or soul speech also known as obsession like the physical hearable himself sing use same voice system but different frequencies allocated and you need to intentional or goalful or strategic read like the holy book silent aloud or quite inside yourself or sing anything quite or aloud inside yourself or sing anything quite outside yourself if you want to match or cure or bind or agonize or modulate the soul corrupted or antagonized or mutated speech or obsession frequency or level or sectors to suppress or attenuate or get rid or detox or fuck or kick or evacuate or kill obsession and you will not hear it again like right now repeat it when needed and also what called the sound frequencies media heard with earphone or without earphone use same obsession frequencies more than music as increase attention and cure or stop obsession activates parasympathetic nervous system for human body heal like alpha brain waves and also what called as the affirmations media or the invisible or stealth or undetectable or high level or natural or indirect or next level or rare or unlimited or miracle or sophisticated or unspecified or

unnamed or unknown affirmation talk in soul or outside soul and also known as pronounce words alone or not alone and also there is thing called talk therapy or recordotherapy generate same that invisible self produced affirmations or goodness precursors or productivity precursors by self respond to the requests or questions or insights or commands and also as not just responses but promises during the serious conversation with someone or god or self or in continue to aforesaid talk or write or sing or read or listen and repeat those words in soul or outside soul after singer and can be called affirmations repeat therapy listen like to music or quran like the verse and those who turn away from ill speech or like prayer tashahud like peace be upon us and upon the righteous slaves of allah and like nasheeds like the nasheed but my prayer or o taiba or nafsaha or himself intentional affirmations recorded before years or record affirmations for the future and will initiate mind enlarge or memory larger and activity inducer or life inducer or goalful life inducer or strategic life inducer or planned life inducer or organized life inducer this is potent all of those strong affirmations when heard with earphone or without earphone is same the mind hearable involuntary

obsession also known as negative overwhelm disrespectful voices but they are good voices precursor or goodness precursors and the human will derive as the current think mode or the obsession is continuous derivation of early intentional unjust negative single thought accepted not ignored anyway as it is was the best but not endured moments

loses
selective therapy like do activity or any work or productivity or creativity include generate or reason or decide or plan in its right place like allow poet generate in room not kitchen during cooking or mosque and not watch online video platforms during walk outdoor and not open job decision think in outside entrance or store and not plan business in outside entrance or street even discuss say as who say to simon it is not the place and it is not the time and not play during drive bus and not solely think or wish or expect or intent or insight or exploit mistakes and cause shying or seek or do any activities related to sex with inappropriate human like doctors in hospitals but not right human in clubs because they are laws like gravity for balance and beauties and should save them to still have entertainment in its other appropriate place more and also called maximum tasteful transformative orgasmic reaction effect like cooling fired faucet with cold water and thereafter prolonged blessed conditions like coldness and for example when someone forbid himself and become hungry and come to appropriate sex time will have maximum tasteful arousal and effort and orgasm and thereafter prolonged blessed conditions and

not reason most science in outside entrance or street and not speak to barber about business plan and not say not ready new unmatured or undrafted or uncollected or unknown ongoing precursory knowledge or explore to audience like recent time thought accept all previous feelings and upcoming feelings all them good and necessary for balance do not hate to back to sadness or depression or torture and we did not know or explore yet whole available knowledge and it is unknown and we will not advise audience with false or pseudo premature knowledge induce lost or unknown or such knowledge precursors and we need to be firm and selectively respond and advise and speak depends on request or promise or matter or needs not just expressive entertainment and stimulation you can feel that when you are astray you are just entertain from your speech not see anything else and feel abnormal just you entertaining and others you forget about them include your organs and not mix things as sabotage even if we like it and mix song with math make them useless and sabotage magic and mix fire with water make them useless

do not steal from yourself to your activities and be selective

or planned or intentional or ruleful or organized or serious or exact like when you intend to write something in far book go write it but after complete do not hang or be stupid leave as you done what you intended sincerely so be sincere and despite yourself abilities pushes to do it and that is the trap and called randomness start and end with lostness except if you decided and strongly intended that is ok but stealthily no and stay follow your guidance or vision or serious drive in your mind will arrive you to everything needed everything have its time scheduled by god and you are activated depends on needs so relax now
not emptying yourself too much for something

hidden detoxification ways
radiation
blood minerals or ph or osmotic pressure or flow pressure or temperature or gases modulation and give detoxificants there is secret and for example the hypocalacemia unbind electrostatic bonds naturally and commonly they want the excitatory diseases mostly was hypercalacemia for toxins detoxify prevention and that is like by disable phosphate factors or transporters

warm skin restored after time like hyperthermic agents were missing

niacin

fatigue inhibitory sign from immune system activation repair damaged cells so shall not interrupted by stimulants reverse body inhibition and that will deactivate immune system and parasympathetic nervous system and fluid secretion system

graphene oxide act radiation absorber and that strengthen external radiation inside human body and if have radiation the graphene oxide already filled body may be more close to dna than common mineral oxides and that cause more tumor chance so people who have tumor after radiation

have heavy metals and nanoparticles toxicity suppress repair and that at least by continuous local excitation prevent parasympathetic nervous system and other companions such as the immune system activation additionally ivermectin detoxify pore blockers when appeared nonselective channel opener

hypotheses chapter

reverse rule in medicine

whatever american fda and ncbi and doh say do opposite exactly even if that will cause death less bad than follow liars and unethics and that was about our rule none else

if they said take vitamin c everyday do not take that because that strong osmotic and cause heart attack as local osmotic agent want draw fluid and that cause local muscle contraction to secrete fluid in stomach and sometimes that muscle contraction happen rapidly not normally and that cause sudden strong whole body muscle contraction one time or repeatedly and that was heart muscle spasms cause heart attack

if they say take vitamin d for most diseases do not take that because that excitatory and able cause hypercalacemia and that lead to more excitatory diseases such as agitation or

anxiety or adhd or psychosis or others but that good use in inhibitory diseases such as fatigue or hypotension help so there difference

if they say take calcium for most diseases do not take calcium because that excitatory and cause more excitatory diseases such as hypertension and agitation but that good use in inhibitory diseases such as fatigue

if hypocalacemia truly cause excitation because human body will use other excitatory factor but unsuitable like glutamate for cover then will cause excitation and that is called absence substitution effect and that calcium term deficiency dependent inhibitory molecule and primarily excitatory molecule

if they say calcium was effective from among supplements during trial for tumor prevention do not take that because most tumors are excitatory diseases have hypercalcemia already and that early sign for tumor sometimes

if they take stimulants for addiction diseases do not take them because they are excitatory molecules and those are excitatory diseases not prioritized way ever but play and almost all times will lead to more diseases

if they say about most things such as sugars alcohol are increase tumor do not believe that because all sugars are osmotics work fluid secretion system activators and helpful

they say

sugars alcohol cause tumor

translation

sugars alcohol help tumor

if they say phosphorylation increased in tumor do not believe that because that from repair tag system same ubiquitination used to tag damaged cells for repair and inspire phosphorylation deficiency in that disease

if they say do not take chlorine dioxide to us we will take and already taken that and have much benefits

if they say take uridine for dementia do not take that as excitatory molecule and will cause more forgetfulness and we taken that already and have agitation and insomnia and forgetfulness and that seen in ncbi! yes will happen multiple times and that have title uridine have restorative effects in alzheimer come to check right now before secretive study deleted

thank god that way work

almost all times include but not limited to chlorine dioxide and inhibitory molecules as opposition to what they advice wrongfully like excitatory molecules such as mao inhibitors or stimulants for memory diseases because excitation bad and preexist in almost all diseases and they are advice for more excitation and that crime clearly but courtsproof so any one do not distress yourself and wait for god justice

always we use reverse rule and have fabuloustic results

united states of america government common poisons

1# continuous poison general prescription for public in food especially from delivery and hospitals secretly

forever chemicals
halogenated toxins
halogenated drugs
fluorinated toxins
fluorinated benzisoxazole
pfas
fluoride
in human body fluorine react with oxidants like hydroxyl radicals and create fluorinated toxins some stay pass and they ultimately adsorbed and excreted but others bind with receptors need radiation or equilibrium fluids balance unbind them and they are adsorbed and excreted overtime most important matter stop toxin exposure truly and take nutrients they are crucial and other treatments appear

enough

lipids synthesis disability
protein synthesis disability

mineral oxides
titanium dioxide

depletion toxins
vitamins depletion toxins
minerals depletion toxins
simple food strange molecules
sodium benzoate
edta

why

we are targeted individuals and the united states of america government poisoned us from delivery food and near stores cooperation and prepare spied products in walmart shelves after schedule visit and from evidences they give us geyser water green contain massive heavy metals amount one sip

caused for me dry mouth and other diseases lasted week and many other water brands counterfeited too cause for me tiredness and forgetfulness and ate small piece from chocolate caused agitation like ten cups coffee and hot sauce caused tiredness and forgetfulness and extreme sensitivity and potato chips caused rare agitation and forgetfulness and biscuits caused forgetfulness and icecream caused forgetfulness and same brand but purchased by other person did not cause that ever

additionally one day we talked about lecithin in the chocolate spread nutella improve memory and next purchasement that product arrived dry without the emulsifier lecithin and that prove they had big ability counterfeit products in less than one day same 1 day delivery mail service ships from first state to last state sometimes they use airplanes as their shows in satanic number times threat us because they had oil and money and iron but usually they already have local original factory subs in same state and many counterfeited products forms and that was same what they recommended to the burkina leaders add toxins in food and market that in criminals area and they be disabled easily and their agency work mkultra

was clear tiny hint then that truth was ultimate reality and after we take the activated vitamin b12 and vitamin e and selenium and other nutrients heal agitation and memory

why nanoparticles such as titanium dioxide or graphene

oxide

catalysts

may be mobile devices radiate human body cause excitation and that helped by catalysts inside human body

disclaimer this is general information the people who want do that they are responsible for their own deeds we are not responsible in any way but we loved to share some benefits

how i am the god messenger to america

my name amer like america and that was from messengers and prophets usual signs same adam name is inspire from earth soil and created from that and others

my born date 9 9 2002 and they are same their numbers but used by god too before more than thousand years in books

the god taught me few unseen things and that saved me

avoid the united states of america badness before they do evil many times and know many facts without any help from others and that was the firasah given to believers but more strengthened to righteous people order from prophets to below and sometimes given to whom god want even the atheists from behind wisdom

the god saved me from ten times kill without weapons and many plots and from them visited the emergency hospitals from their poisons thirty visits in three months but ignored me and still not dead until this moment to deliver message

after uncountable events i was write about this worldy life and afterlife matters like i was talk to them because that is compatible with their conditions and from that i knew that was message from god to them none happened in this life coincidentally because they are excessive

after uncountable events i showed great deeds expose the oppressors to people and that was from messengers usual signs from their routine are expose righthood to the people

i witnessed strange incidents with quran first incident after

ran from them and locked on my self in my room i was read verse and weak resident walked around me while read same verse and listen to same verse from their device and second incident went outside apartment near stairs and i listened to verse from known weak resident device in second floor and returned to my room happened in morning and same thing happened next day and third incident i opened quran and see single verse related to my condition and repeated in those days and that was sign from god support

my morals

those were eight signs messenger given them

goals

message delivery

the message about five matters

falsehood not win ever but beautified initially and righthood win even if its people less

take islam or at least shahada if you can or judaism any one but not christianity because polytheist and be good not bad for repentance

repent about your past

stop do not do anymore evil deeds

glad tides about paradise

i do not ask you anything and i shall not accept any material from you so what you assume i came from unseen and i will believe unseen and that was the unseen so forget robotism littlebit there is god and hell and paradise in afterlife

so if you think you are smart what is your achievements and

that is prove your knowledge compatibility with the ultimate reality matters if you have great deeds so your knowledge in harmony with natural life and see who know the right

albert einstein

mathematician, physicist, and inventor.

the more i study science the more i believe in god

isaac newton

mathematician, physicist, astronomer, alchemist, theologian, and inventor

The admirable arrangement and harmony of the universe could only have come from the plan of an omniscient and omnipotent Being

charles darwin

naturalist, geologist, and biologist

he described himself as an agnostic rather than an atheist,

feeling the universe was too complex to be the result of random chance alone

some tumor type are inhibitory disease like edema or water retention or obesity or even kidney stones or gout and give broad spectrum excitatory molecules such as st john wort and acetylcholine agonists for excitatory receptors such as nicotinic receptors or sterilizers such as oxidants or solvents help because some people have urine retention and obesity

energy therapy

subtype

radiation internal radicals production therapy

target

almost all toxins inside human body

examples

reduction neutralizable toxins

examples

forever chemicals
vaccines
many toxins

oxidation neutralizable toxins

examples

infections
vaccines
many toxins

mechanisms

some toxins are same tumor cells or stones human body not able destroy them but radiation therapy able so most toxins were like tumor cells and stones but fractionally smaller that circulate and distributed inside human body

the known way

radiation

examples

sunshine
xray

no known pretreatment

the partial way

description

more gentle target forever halogenated toxins like pfas and many drugs and suppress strong oxidants such as hydroxyl radicals and others but boost reductants such as hydrogen radicals production

prepare

antioxidants such as dmso given before radiation and that cause two things the first is oxidative radicals suppression and the second is reductive radicals prioritization and few satans advice that dmso neutralize reductive radicals like hydrogen radicals too but that is false because common antioxidants are reductants and they are friendly to most each other reductant then dmso or hydrogen radicals do not react because they are from same class but negligible slow neutralization after finished all work so unmentionable

and they deceive others to not boost the hydrogen radicals production because they will neutralize halogenated toxins such as forever chemicals or pfas more quickly

radiation

unnecessary radiation enhancers

radiation internal more absorption and mirror way

description

radiation internal extenders like internal wireless extenders

examples

radiation absorbers

conductors

mineral oxides
metals
zinc oxide

description

internal radiation extenders absorb from energy sources like heat or electricity or xray radiation electrons more stronger than the unspecialized light receivers like human body and water alone and that is boost electrons transfer speed and mirror electrons to liquids and those electrons cause water produce rare hydrogen radicals and hydrated electrons and hydroxyl radicals more than just the radiation alone

internal additive radical production way

description

increase radiation radicals production by radiate additional radical precursors that produce more rare radicals such as iodide radicals or sulfite radicals or hydrated electrons or hydrogen radicals or hydroxyl radicals and that increase effects

examples

aqueous electron sensitizers

iodide
sulfites

description

radiation even without enhancers produce hydroxyl radicals and rare hydrated electrons and hydrogen radicals in human body that neutralize almost all toxins even forever chemicals and graphene and many drugs

about safety those free radicals like given oxidants such as chlorine dioxide oxidation safe and same common radiation therapy and usually most patients do whole body radiation ten times in five consecutive days to sterilize bone marrow

use maybe single full radiation are enough or maintained after weeks repeated couple times freely as needed and from that effectivity sign more health and past excitation gone and the lighter way is the radiation partial way more specialized for halogenated toxins like pfas and commonly other toxins neutralized by oral ways and that radiation type less bad than the usual full radiation and everything depend on needs

some questions

they say radiation damage bone marrow

that lysis may be happen in consecutive days use and even if breakdown the bone marrow somewhat that is necessary for regeneration and part from detoxification same oxidants and amygdalin and hijama because vaccines still exist in the bone marrow and they are not detoxified naturally in this era from other toxins prevention and many factors corruption so that is why people take sterilizers and that stabilization seen in thalassemia after couples married have that forever if not cured and seen after bone marrow transplant stay produce healthy forever and who want save their bone marrow cells are able to use them only if needed after radiation and that is easily choice without excuse and the summary that is not what they sin and negligible and the benefits overweigh the risks

they lie usual radiation not destroy pfas and need thousand times more

facts

how do tumor reduced

radiation produce radicals and they react with tumor so the free radicals are effectively produced inside human always

the radicals especially prioritized hydrogen radicals react with pfas and the radicals already destroyed tumor and stones and tissues how about give suitable radicals for chemical

summary

the most radiation should be enough for pfas destruction especially if used partial way

i am amr alaidrus i swear by god i saw the united states of america government agents in hospital they came for total body irradiation in mount sinai hospital they are jewish and that is their secret way to detoxify spreaded market toxins in simple comprehensive way that is not thought to many

people and the united states of america wanted kill me before not about that but i was learn law and i helped darker human

if anyone want themself new they will be renewed

disclaimer this is general information the people who want do that they are responsible for their own deeds we are not responsible in any way but we loved to share some benefits

amr alaidrus

solvents deficiency such as monoglycerides or diglycerides or even healthy liquid lipids deficiency or excitatory factors deficiency cause obesity because the common solvents are emulsifiers that convert fat soluble molecules like most cell compounds to water soluble for excretion or detoxification

monoglycerides such as glycerol and diglycerides such as diacylglycerol or lecithin and healthy liquid lipids such as olive oil and excitatory molecules decreased obesity

if that is true tumor in obesity more so have solvents who work emulsifiers too such as unusual lipids deficiency and toxins water soluble inducers such as sulfur deficiency and some excitatory molecules deficiency

mono glycerides and diglycerides safe on almost all diseases

protein kinase activators

signal molecules
diacylglycerol

most toxins such as vaccines like bone marrow tumor and sterilizers such as oxidants like chlorine dioxide help that

subs

about kidney disease cure

about seizures cure

first way

detoxification

disinfectants
heavy metals toxicity antidote

second way

nutrition

belly nutrients

conductors such as iron or lead or arsenic increase human body electricity and that increase excitation and that will increase temperature so most excitatory diseases from heavy metals toxicity and that other name always still minerals imbalance such as chronic hyperthermia or continuous muscle erection or visible vein pulsation

when conductors elevated increase electricity and chelator therapy help for seizures

why god commanded people prefer afterlife because that is worldly life stander and life thinner every thing in this life be easy and that help complete many matters and already had dream

most tumor description

dry
gases deficiency
acidic
vulnerable cells destroyed easier than normal cells
temperature same nearby organs

some common causes

the first

excitatory diseases

the second

inhibition deficiency
triple system deficiency
parasympathetic nervous system deficiency
fluid secretion system deficiency
immune system deficiency

the third

tunnels blockage

nutrient transportation factors such as fluid factors like channels or pumps or vessels or ducts blockage cause dryness

description

some channels are known neurotransmitter receptors such as gaba or acetylcholine or glycine were ligand controlled chloride channels increase fluid secretion and their class was inhibitory molecules relieve excitatory diseases too

the acetylcholine agonists used for dryness and chloride channel activators used for constipation and that is why nonselective channel activator ivermectin cured tumor

some rare causes

the first

local toxin exposure

examples

local heavy metals toxicity

dmso are from belly molecules because its final products are msm and dms they are found in gut naturally and were not suitable precursors except dmso and widely accessible and cheap and have more benefits such as dissolve clots in the way

most poisons such as vaccines target bone marrow and rare time organs such as liver and if the human do bone marrow stem cells transplant or blood transfusion from the family relatives that is restore health

before bone marrow gene therapy they backup blood or bone marrow stem cells if the gene modification failed they restore everything

the semen contain original genes so semen genes utilization such as by doctors or by semen intramuscularly injection for somatic genes health restoration and the common way test whole genome and restore them in the gene therapy places easily if not found not found live same usually none change the god already predestined for everything a fixship so will not affect your worldy life ever and in anymoment paradise the god put them right now like lottery victory so that was cure

why most viruses especially backup native human viruses are almost disabled or eliminated from the world but they leave others because viruses are nonselective modulators they may be restore genes function and they use them in tumor cure and essential gene therapy they give the edit tool so if they left them alone they will reverse their gene changes and restore human body health even if caused mild symptoms and that is why they offer virus vaccines without forget toxins in all times as rule and god knows better

vaccines have toxins such as persistent organic pollutants like dioxins or furans transported to fat cells such as bone marrow and that stay about forever or toxic particles such as toxic minerals like mineral oxides usually graphene oxide or crystals work nonselective cell blockers also known pore blockers distributed to human body tunnels such as vessels or channels or ducts or the second thing they modify gene

pfas

summary

common forever poisons fat soluble their storage fat cells more strong than water soluble poisons such as pfas and toxic minerals

most inhibitory molecules are antioxidants and when they reduce excess oxidation that improve memory such as lithium

sound bass same radiation able breakdown molecules but that power sometimes not reach smallest strong bonds so still able separate complexes such as calcium carbonate or protein complex with its ligands and minerals or secondary bonds such as hydrogen bonds so sound are radiation like selective separator because the primary radiation effects are molecule separation and secondary direct effects like oxidation

total body radiation available since decades able disinfect human body from all infections in one hour or other days

but no one used that even during pandemic and that is weird same chlorine dioxide

hypercalacemia sometimes from vitamin k deficiency and that is inhibitory molecule and if with insulin enough for tumor

stimulants are not just increase energy but most stimulants are nonselective stimulants such as st john wort stimulate cyp enzymes production that produce molecules such as steroids when nutrients present

stimulants such as inducers like cyp inducers are increase molecules production such as protein like cyp enzymes or lipids when nutrients are present

the light bulb in america like oxidant as they live by exclusive way they put plot in everything even in home water and they tell their workers how to avoid that and that umbrella fall on others so house water and lights and foods and drugs and studies and other things are trap for

unknown or unwanted people precedly

pharma give conductors such as titanium dioxide in food to increase human body electricity and that cause excitatory molecules

oxidants are excitatory and antioxidants are inhibitory most times and the proof chlorine dioxide excite human body and dmso or melatonin or vitamin e inhibit that because they do not take but donor

antioxidants are from the most strong inhibitory molecules became they inhibit human body and antagonize oxidants such as most radicals they are excitatory molecules

hydrogen donors or electron donors or methyl donors or other donors act as critical supply partners for human body

inspire common diseases are excitatory diseases and give more antioxidants after oxidants help them and improve memory and tumor

some people used melatonin or ascorbic acid intravenously because oral are acidic and have strong osmotic effects not wanted from that and they helped tumor because tumor is excitatory disease and they are inhibitory molecules

pharma give adsorbents in food such as acids like edta and phosphoric acid or citric acid or any other future acids they are chelators and polyethylene glycol and that deplete belly nutrients like vitamins and minerals and protein and they are in big amount and they are extremest and strongest deplete type toxins enough to level human can not imagine except if have diseases and notice wrong changes and measure with contrast ways and for example someone drinked pepsi and in next day have alzheimer like forgetfulness for days if was not replenished with belly nutrients then would stay in that disease and even take fruits and much honey contain more sugars and other day take beef with rice and oil and pepper powder and hot sauce before days from drink soda but did not cause anything and improved human body

the strange molecules forgetfulness rule still exist and they are such as hot sauce forgetfulness power lower than soda and depend on the human body nutrients storage such as belly nutrients like activated vitamin b12

lipids same sugars work adsorbents for detoxification but pharma appear they disable belly lipids secretion factors and that primary way to excrete lipids waste too and that include gallbladder stones and maybe cause obesity and cholesterol waste toxicity that name high bad cholesterol and the second option they impair lipids production

carbon containing molecules such as carbohydrates like all sugars and their derivatives work strongest chelators ever and their other name adsorbents but in simple term same thing and anyone able see sugar produce viscous liquids that bind anything same gum so sugars for detoxification

that was why old pharma advise against take sugars and even they spread diseases for terrorism whilst sugars are osmotics too help tumor and sugars are improve memory

the known rule no nutrients less sugar stills and that if the human body not able produce nutrients such as from liver diseases or defective microbiota and not replenish by take belly nutrients and that common in patients so do not take much sugars and the second thing if the human especially just take much sugars without other nutrients usually belly nutrients so decrease sugars intake but balance because from god rules in the ultimate reality will not allow anyone rely upon one thing ever as that life disability and you will feel bored but from god sagacity already predestined on you change early like risks management early prevention

most antioxidants are reductants and they are adsorbents and they are osmotics and for example glutathione reduce toxins and bind them and dmso same and vitamin e same used for heavy metals detoxify and ascorbic acid and that additionally acid and carbon containing molecule known as adsorbents

the general rule is all conductors shall work for radiation or

ultraviolet or electricity because they are same thing such as solid titanium dioxide or iron oxide or boron blocks and others but some tell false advices inspire they are different and hide others and show what they want expensive things what a stupid fact they exploit the people when they do not have test ability and deceive others so people not purify the water from their toxins then same massive chlorine dioxide defamation matter level and even water purification by all radicals production from strong energy sources such as radiation or ultraviolet or electricity in strong power are enough without semiconductors but they are promote conductors for no reason and play and many scientists followed them and they were from the grey are people those still fight with frivolous things same doctors fight infections with thousand drugs but not chlorine dioxide thereby 7 billion people insane we should hold the rules from science and not leave them except after confirmed truly not just follow them their leaders bewitched so not exist but satans inside their body that is not overexpress who do not know not know that was the under world and always remember they will deceive you in many matters in the future same the past aggressively because everything

good they want that for them without others ever they will move whole country against their fame technically you are always not deserve live in their knowledge so they try flip everything against you but they are weak and defeated easily evil not win ever despite the initial firm beautify

boil and microwave are thermal heat not cause electronic excitation so usually useless in produce radicals for water purify and may be have name bad methods abbreviation about free radicals production but other energy sources such as radiation or ultraviolet or electricity work usually without conductors but sometimes need conductors

the general rule all conductors shall work for any way but many satans deceive others because they do same thing then is there is anything after that of course no but same unreasonable goods separation seen in drugs not say the root class either excitatory or inhibitory and massive false chlorine dioxide defamation matter level think deep about that how created deceived reality even who was have the test abilities they convince them with the evil excuse they do not want terrorists such as targeted individuals know

about that Google translate so the drug be for us only

radicals production

single way

radiation
ultraviolet
electricity
chemicals

multiple ways

examples

chlorine radicals

chlorine dioxide
dmso
room light substitute ultraviolet

orthotolidine neutralize chlorine and bromine and other halogens and they suspiciously classified that carcinogen may be like chlorine dioxide or not

antioxidants are reductants such as thiosulfate or ascorbic

acid or or benzene containing molecules like orthotolidine when neutralize chlorine so neutralize other halogens too usually despite false deny in institutes

dmso adsorbent bind mineral and dmso have penetratation abilty too and that dmso complex enter cells individually but still with that chelated mineral and in human body dmso are assumed partly or whole breakdown and release content so penetratable chelators same dmso or may be when deliver molecule without complexation and that is overact

solvents strong detoxificants because reduction type such as dmso unlink substance molecules back to original state and they are detoxified individually after shallow solvation dissolved bonds and even they are dangerous when taken in excessive amount and in assumption ethanol dissociate many human body molecules that about to disable human when most things are unconnected and isolated alone and that appear false

the companies use alcohol in products such as drugs and gasoline for breakdown acceleration and evaporation and contact materials damage such as vehicle engines so the people purchase more gasoline and new vehicles and not able store them forever especially in war increase amount and seen in yemen some foreign gasoline evaporate quick

antioxidants or reductants are solvents usually such as dmso

dmso is chelator detoxify human body from heavy metals even silicate and clay minerals and mineral oxides such as titanium dioxide despite pharma terrorist calculations that same known chlorine dioxide defamation matter level and that is why unblocked eye tunnels because blocked with them or old dry eye waste

radioactive materials effects

first effect

radiation

v

water produce radicals such as hydroxyl radicals in chronic production not good

second effect

if radioactive minerals entered human body

v

radioactive minerals cause water produce radicals such as hydroxyl radicals in chronic production not good

second mechanism

radioactive minerals mimic some minerals and the human body use them

v

diseases

summary

the energy protectants such as from sunshine or radiation heat or maybe water or oil like by either contact prevention or human body improvement such as fast antioxidants like dmso able neutralize almost all harmful nuclear effects on humankind as adsorp toxic minerals and excrete them like the nuclear around not happened

especially when combined with mimicked minerals such as calcium carbonate or calcium phosphate or potassium iodide stillness and cover face and cover whole body skin like with sunlight protectants

radiation are the ultimate oxidant ever because have direct

oxidation effects and cause water create hydroxyl radicals

radiation are the ultimate detoxificant known in science ever neutralize almost all toxins because cause water to produce rare reactive radicals that include but not limited to hydroxyl radicals or hydrogen radicals or hydrated electrons and had direct effects and even neutralized all forever chemicals and infections and many other toxins old or new except minerals you see that great power

why pharma produce heavy metal based drugs and halogen based drugs and include but not limited to platinum drugs and fluorine toothpaste and fluorinated benzisoxazole so the drugs stay damage longer same heavy metal toxicity and sometimes create rare bonds with human body cells like receptors and bone marrow cells

i am first one who was forced have false antipsychotics and tortured me years

they give mineral oxides to bind with acids to create stones

and that block intestines and pancreas cells and other cells same mix acids with milk form calcium carboxylate and that inspire diabetes type 1 autoimmune disease that attack the pancreas not from nothing ever but microstones

adsorbents are chelators and osmotics and each have three classes usually and for example acids chelate minerals and that inspire adsorp too and osmotic draw water and used for constipation such as ascorbic acid and mannitol and sulfate

carbon containing molecules are the strongest adsorbents known in science such as activated carbon and edta they bind almost all toxins and more if with sulfur or methyl or carbonate or other chelators or other osmotics and that inspire sugars like sugar alcohol high dose able detoxify almost all toxins and about dmso already known chelator and osmotic

stimulants such as st john wort increase human energy

stay for days without sleep voluntarily more powerful than coffee 10 times even next days like metabolic modulator

unusual awakefulness appear to increase oxidative radicals from nutrients utilization process for energy while depleted available antioxidants and that is why melatonin antioxidant and from sleep effects are antioxidation and produce many antioxidants and that inspire antioxidants support stay days without sleep

the most oxidants cause transient mild forgetfulness as side effect amid detoxification and that inspire electron ejectors such as hydroxyl radicals when act continuously affect the memory that name oxidative stress and electron donors or their root hydrogen donors such as antioxidants common reductants like glutathione or dmso are enhance memory

dmso is portable glutathione

they say radiation damage bone marrow

that lysis may be happen in consecutive days use and even if breakdown the bone marrow somewhat that is necessary for regeneration and part from detoxification same oxidants and amygdalin and hijama because vaccines still exist in the bone marrow and they are not detoxified naturally in this era from other toxins prevention and many factors corruption so that is why people take sterilizers and that stabilization seen in thalassemia after couples married have that forever if not cured and seen after bone marrow transplant stay produce healthy forever and who want save their bone marrow cells are able to use them only if needed after radiation and that is easily choice without excuse and the summary that is not what they sin and negligible and the benefits overweigh the risks

mineral oxides neutralized by reductants donate hydrogen

dmso prevent tumor when unblock channels as ivermectin nonselective channel opener cure tumor and dmso unclog

dry eye ducts

the united states of america government give toxins such as the mineral oxides like titanium dioxide or graphene oxide in food and drug and their class catalysts and semiconductors and radiation absorbers the first thing to increase radiation exposure from the towers or routers or mobile devices that is released spontaneously so the useless populations such as poor people diseased and the second thing to increase radiation exposure especially from the mobile devices that released intentionally by spiers so the targeted individuals diseased earlier or scare them by sudden radiation usually in their satanic time numbers about 9 or 11 same their false attack to defame muslims and even that sudden shocks can be from magic on the targeted individuals usually so there is two sources only and the third thing the toxins work general poison and that cause agitation and forgetfulness and block cells and that include every where like the pores and vessels and ducts and pumps and channels and receptors and from that tumor and other diseases and the fourth thing they are

increase electricity in human body and that cause excitatory diseases such as hyperthermia or hypertension or seizures

the toxins in some drugs such as platinum in chemotherapy are given in slow delivery agents so unpack over time slowly and that is usually happen by oxidation and even they name that drug platinum based usually bond to molecule and that is why bone marrow tumor happen after months

most scientists said graphene oxide are coated with lipids in vaccines

even in albany med hospital i did not went to hospital before ever in my life and i was suspect i have posion from food but not true as no any symptoms and they take blood and given cheated flush saline solution in small tube intravenously and i was about to sleep instantly and they given me more fluids and pills despite nomal test result and after days i start feel bad for the first time in my life and i visited all the hospitals more than thirty times in most new york state and that end in learn medicine and from their

toxins were heavy metals

summary

some drugs are contain toxins released slowly over time and even many unpacked toxins take time damage the body like the infections not appear except after days

platinum effects

heavy metal toxicity
immunosuppression
hair loss
myelosuppression
bone marrow tumor

most liquid cancer after chemotherapy by platinum toxicity cause myelosuppression and inspire chelators are enough

pharma use platinum in drug because that is expensive and

support justify 300000 dollars price and most patients are diseased by them so they were targeted individuals useless population and that was poison too to not benefit from the active ingredients and most tumor treatments intensified to terrorize the targeted individuals so die early not requested treatments

some oxidants have enhancement such as hydroxyl radicals are whole hydrogen ejector and not just selective electron ejector like chlorine dioxide

dmso class hydrogen donor and electron donor and depend on conditions

chlorine dioxide eject electrons from dmso and none give electrons except was electron donor so dmso electron donor

hydroxyl radicals eject hydrogen from dmso so dmso hydrogen donor

always true hydrogen donors who donate proton and electron together also called electron donors and proton donors

they deceive even if pfas breakdown inside the human body free fluorine reactive

free radicals bind to minerals like calcium or aluminum and excreted or even if bind to proteins the proteins detoxified easily because their bond not like previous pfas ultimately detoxified

summary

whatever happen from toxin decomposition are the leastest bad thing and most better thing few days and all detoxified

they lie usual radiation not destroy pfas and need thousand times more

facts

how do tumor reduced

radiation produce radicals and they react with tumor so the free radicals are effectively produced inside human always

the radicals especially prioritized hydrogen radicals react with pfas and the radicals already destroyed tumor and stones and tissues how about give suitable radicals for chemical

summary

the most radiation should be enough for pfas destruction especially if used partial way

who noticed artificial intelligence not give best advice but

grab unexist troubles now i knew i was talk like to national racist same them no no no that is not true you can not that is toxic negative and help in small thing who comprehended dark odors be stunt all gangs

targeted individuals

chlorine dioxide

radiation

hydrogen radicals

hydrated electrons

dmso

all prohibited for detoxification use so were among targeted individuals

unconfirmed

orthotolidine

antioxidants such as dmso given before radiation
commonly
work oxidative radicals suppressant block hydroxyl radicals
by quick suppression and that prioritize reductants such as

hydrogen radicals production because no hydroxyl radicals and maybe have harmless neutralization effect on hydrogen radicals but slowly after hydrogen radicals finished work so that is negligible but satans deceive people dmso neutralize hydrogen radicals and that false because most antioxidants such as dmso or vitamin e or glutathione are reductants and mostly classified either hydrogen donors or electron donors but most them still classified reductants they do not target each other except harmless negligible slow neutralization but unethically claimed so in summary most antioxidants work reductants they do not target each other and they cause two effects first is oxidative radicals suppression follow with reductive radicals prioritization for neutralize pfas more quicker

most artificial intelligence responses are mislead based on unethical far thing same the false chlorine dioxide defame matter level but still work effectively

some people may be ask where is the scientists correct the false science information that shared outrightly even rudely front the general people but they do not know they already

tried early but the united states of america oppressors did not hear them and said avoid that or be followed and from the anesthetic excuses they convince the people that they do not want the terrorists around the world exploit unusual poison antidotes so heavy misinformations still shown until this moment and whom where the terrorists i swear by god all their terrorist lists have innocent muslims and arabs and children and womens and elders and patients and who not useful same me tortured me o america six years without sin o america since my age was seventeen years you target me from first month the targeted individuals list usually choose by human roots if you wake up and yourself from arab then america chase you and give you new term the wakoarabist they are oppressors no one know until oppressed and that proof remember sazon goya odor if you can not you never comprehended the life so what i want say they submitted the leadership to many jewish and they are bewitched so possess them satans truly and take antiemotional drugs everything to increase productivity then in summary the manipulated american leaders rely to absent jewish and they rely to satan and that not have limits its evil on the world so they given satan more privileges on humanity

unquestionably all betrayed themselves in this life and afterlife seriously if they do not repent and everything obvious the evil exposed more against them but insist

that was simple explanation about their evil deeds why happened like they do not have hearts they are absent before i knew they used magic i was wonder all day do american leaders humankind until knew ultimate reality

betray big betray big betray they invited us migrate and given leadership to false jewish not good and absent but satan possessed them left judaism behind and followed what satans teach and that was the ultimate reality fact mentioned in the noble quran

the common frivolous issue that people argue were about whether molecule for example dmso work hydrogen donor or not because some unable identify the reaction process well so may be not possible know what initiated and from their unconfirmed claims hydroxyl radicals attacked sulfur while the usual is sulfur attack others and everyone claim relative classes so in that tight not clear world confusion

and historical they did not classified that except after lot individual reactions and what appear dmso is conditional hydrogen donor because if that true neutralized hydroxyl radicals not without sulfuric interaction usually none steal hydrogen from molecule except that molecule were donor then indirect expose way and second thing when molecule contain special mineral its features like hydrogen donation saved behind and prioritized the mineral effects and much know that generic chemistry but i written that without any experience after witnessed oppressors in this world share many wrong informations same chlorine dioxide evil forbid matter level they say that can not and that is the opposite and that unable be neutralized foever so their translation enter despair actually after dispaired you from reality so that is why allah prohibited love the worldy life if anyone stick that was like stick to shit

mineral containing nutrients such as glutathione or cysteine or selenocysteine or albumin or cobalamin or the cobalamin containing proteins they work universal adsorbents because sulfur or selenium or iron or cobalt is

reactive if freed during reaction will react with others and that usual or conditional depend on need then still true and for example cobalamin containing proteins inside bacteria or cobalamin external biomimetic system given electrons like biological energy supply by reductants like iron neutralized halogenated toxins like pfas so the cobalamin need reductants and commonly sulfur containing molecules exist in human

the usual antipsychotics and some drugs most dangerous matter

halogenated drugs also know as forever drugs

explanation

antipsychotics

examples

invega

fluorinated benzisoxazole based molecule

synonyms

forever chemicals
pfas

summary

the most antipsychotics and drugs shall stay in human body and cause torture side effects such as akathisia forever

i am first one the united states of america government gave most the leadership to many jewish bewitched themselves and take antiemotional drugs to increase productivity and those jewish leaders hurt me since first month i migrated america and after five years took me from my house and

placed me in ellis hospital with false complaint one from that why i said america want kill me and second unexist reason their civilian agent justin lied i want burn house i refuted but no response and given me invega injections forcibly despite they give all others just pills always and given me invega pills before that after i say i do not have idea because superme court and my lawyer betrayed me and i am prisoned and they threat will restrain me and do that if i do not take invega pills and tried kill me from first days arrived until last days by american and asian agents act as gangs and all patients left earlier except me i were first one ever in recent years who stayed one month and more and after that i said to that hospital call the police escort me to my home because i were in isolation in my house since years after some agents wanted kill me in streets many times but all they refused and i returned anyway and after weeks the false transient inhibition vanished and until today after 535 days still tortured message to them does that what you treat the truly diseased people but not me because i am not one

inspire

all halogenated drugs prohibition better because they are forever chemicals like pfas and they do not exist in nature

we must understand that everything have simplify rules and in the cook the boiled food whatever meats or rice or beans can be eaten perfectly without add decorations like salts or seasons or vegetables and in the medicine usually diseases have two types excitatory type cure by inhibitory molecules and inhibitory diseases cure by excitatory molecules can be used forever and in the religion started with prayers slow by slow until guided spontaneously wow scholars mystery gone

moreover but not full in the water filtration system field they sell less than six standard empty cartridge sizes filled easily with carbon or reverse osmosis membrane or prepared one and few counted connectors less than three tube sizes and few adapters and switch and that was for your need is right or not right imagine today you are in house but tomorrow in business then give the people free will or simply go to learn from its door none great and that generic static matter that already posted like financial institution transaction post not invention ever so relax same other generic jobs like chefs or lawyers or drivers many they be and gone repeatedly always that is life or what is life even text same san francisco bridge

the poisons in the market neutralization are three types the common type like graphene oxide neutralization by oxidants and the second type like pfas neutralization by reductants and the third type like all them neutralization by adsorbents

the most poisons in market halogenated such as fluorinated molecules like pfas and false drugs like antipsychotics have fluorine and they are neutralized by reductants such as rare radicals like hydrogen radicals or hydrated electron radicals that do not happened in human body ever except unusually

do anyone thought the radiation like an xray or sunshine for the human body was the antidote produce hydroxyl radicals and hydrogen radicals and hydrated electrons in the human body and they neutralize all the toxic chemicals include pfas and forever toxic fluorinated drugs and graphene oxide and others

about increase radicals production inside human body from radiation therapy that process name nanoparticle enhanced radiation or radiosensitization by administrate earlier before radiation the enhancers or energy absorbents or commonly catalysts such as zinc oxide or iron oxide or gold or titanium dioxide or without enhancers the radiation itself are enough

more better than manual blood uv irradiation as the uv used weaker

even some people are prevented from radiation and sulfites and others to not produce free radicals so extreme rare time few have tumor or some allergy but they are not the primary targeted individuals so rest assured

the summary radiation therapy for detoxification

they gave some patients antipsychotics contain fluorinated benzisoxazole same forever chemicals to stay agitated and that inspire drugs contain most fluorine forms are more bad

some atomic war advices for the oppressed arab countries

some facts

first thing

atomic bombs same known missiles

second thing

destruction

known missile and atomic bomb they destroy target same thing

third thing

damage area

atomic bomb extra damage range about 3 kilometer square same hiroshima incident

fourth thing

atomic ashfall

atomic bomb extra feature smoke later fall on earth same volcanic ashfall but ashes contain radiation last about 24 hours or three days range to 15 kilometer square same hiroshima incident

end

examples

atomic bomb used on hiroshima japan destroyed target and damaged 3 kilometer square area and atomic ashfall on less than 15 kilometer square area and the humankind damages were about 5000 deaths and about 5000 injuries from the 3 kilometer square damage and about 1000 patients same temporary xray sickness healed spontaneously after time from the 15 kilometer atomic ashfall and that estimated by reasonable pure mathematics and geometry and the other measures rather than authenticate terrorist news of course they come to that position and inspire look how many dead whilst frivolous thing

most leaders do not want use atomic bombs because they are same known bombs and they do not want defame their atomic bombs as they spent years deceive the people and even they inspired once upon a time there was one atomic bomb create heat more than sun surface and destroy the country and cause global atomic winter and that all was

false so if they use them they appear frivolous and that unwanted thing so they are not same what they say ever except same well known bombs none less and none more

most leaders do not want use atomic bombs because that deplete their storage and may be other countries come fight

most leaders do not want use atomic bombs because that may be cause world war as no one feel safe especially if was oppression on weak country

the known countries will not fight with atomic bombs ever so rest assured and that what spoken from the most people

some advices

radiation avoid ways

carbon masks

face wears

glasses

radiation detoxification ways

in first three days if the people inhaled the atomic ash that cause radiation solely from radioactive minerals in that ash

first way

radioactive effects prevention

give the mimicked minerals by the radioactive minerals and that is block radioactive minerals use by competition cause more priority to use new ingested original minerals and the radioactive minerals stay unused until excreted naturally or by chelators

examples

if the atomic ash contain radioactive iodine 131 that is mimic iodine

original minerals

potassium iodide

if the atomic ash contain radioactive cesium 137 that is mimic potassium

original minerals

potassium iodide

if the atomic ash contain radioactive strontium 90 that is mimic calcium

original minerals

calcium carbonate

if the atomic ash contain radioactive uranium that is mimic calcium

original minerals

calcium carbonate

the atomic bomb creators used iodine 131 that mimic iodine and cesium 137 that mimic potassium and strontium 90 that mimic calcium and uranium that mimic calcium and that was happened if they want negotiate with the countries they tell them the antidotes potassium iodide and calcium carbonate every mineral to disable radioactive minerals effectivity until excreted spontaneously or by more ways such as chelators whilst some from them such as carbonate work as chelator too

antidote minerals summary

calcium carbonate
calcium diphosphate
potassium iodide

second way

chelators

sodium bicarbonate

calcium carbonate

sulfur containing molecules

magnesium sulfate

dmso

selenium

third way

sometimes the radiation sickness from atomic bombs cause inhibitory diseases such as tiredness or fatigue or low blood pressure so if the people appear inhibited take excitatory molecules such as salt or others

examples

excitatory molecules
salt
stimulants
tea
coffee
sugar

conditional

oxidants

chlorine dioxide
caclium hypochlorite
hydrogen peroxide

description

the oxidants are mild excitatory molecules and they oxidize sugars and lipids and nutrients in body and that give energy especially if the human body unable and that was rare thing

hydrogen peroxide more powerful than chlorine dioxide because that increase hydroxyl radicals generation and they work universal oxidants then they are universal neutralizers that detoxify all drugs even graphene oxide as strip carbon molecules fundamentally and carbon needed in almost all chemicals and that show hydroxyl radicals are good then inspire not cause tumor ever as pharma lied because they are oxidants act detoxifiers like chlorine dioxide do anyone have tumor thereafter use that no and the hydroxyl radicals

production more increased in some patients like alzheimer people to detoxify poisons as natural defense response usually inspire stealth continuous exposure but pharma seems to defame hydroxyl radicals and given graphene oxide from that work is antioxidant counteract hydroxyl radicals if were insufficient

the summary hydrogen peroxide better than chlorine dioxide and hydrogen peroxide were primary immune system tag factor but chlorine dioxide more better in few conditions and the oxidants and their oxidative free radicals like hydroxyl radicals same chlorine dioxide exactly good for detoxification most times

circulation molecules such as blood thinners or brain blood barrier transient openers like dmso are enhance nutrients delivery and that increase most drug effects from nsaids until others

chlorine dioxide
menthol

other ways

leave place to other house for months after no feed animals left
leave room to other transparent room and apply creams for months until bed bugs in old room eliminated
spontaneously or with some work and rarely if came to that new clear room should appear clearly and that help eliminate them

second step elimination

sterilizers whole irrigation

example
antiparasitics infused dmso wide spray

odors affect parasites
example
insecticide foggers
paint house

throw furniture and clothes so be new begin from god and that is why poet said when bed bugs shown that sign from the heaven about renew everything known so be new begin go do that o human

do not travel except with clean clothes

other food sources prevention
example
rodents get rid

spontaneously eliminated in months

summary

creams topically
spontaneous elimination in months

why believers not despair or feel deadly uncomfort or inactive or fear because remember beliefs such as god remembrance and paradise keep them entertained and supported from continuous inhibitory neurotransmitters release such as acetylcholine or oxytocin or opioids then faith is belong to neurotransmitter release inducers group

why people have excitatory diseases such as hypertension or adhd always accompanied with forgetfulness they keep talk unnecessarily because excitation increase gradually and that appear jerks so relieved and return again then uncomfortable sensation they avoid with move or talk because that stimulate vagus nerve and keep release inhibitory neurotransmitters such as acetylcholine or

oxytocin or opioids and that relieve them and keep them feel alive and they unconsciously know that was best way so they keep talk

sulfur deficiency cured with sulfur containing molecules such as msm or dmso or methionine or other found naturally in body

zawamel from strongest weapons because they bring motivation and that bring lot far goodness

do you know one zamel able revive human after many lures such as deep inhibition activities like sleep and sex and any thing else

we use chlorine dioxide best to detoxify infections in need times or toxins occasionally and most important thing stop toxins exposure such as avoid strange food or some bad drugs or vaccines and every thing will be okay and from god wisdom do not allow you rely on one thing so you need fix

microbiota and most people are have excitatory diseases such as high blood pressure then take inhibitory minerals such as magnesium sulfate or b6 or b12 or b4 like from lecithin all vitamins in active form and sometimes nonselective inhibitory modulators such as dmso or rare times ivermectin and common disclaimer anyone ask their doctor

do you know vitamin c more toxic than chlorine dioxide because ascorbic acid strong osmotic patients are unable take that every day and if they take ascorbic acid they have heart symptoms but chlorine dioxide not osmotic and safer anyone with food intolerance or allergy take that not have diseases and that was strange fact

why westerns appear quite and have large mind

avoid drugs such as vaccines or toxic meds or strange food
avoid radiation such as by isolate house walls so stay protected

most times pandemic such as corona cause flu to bring people especially targeted individuals inside hospitals and give them poisons for death or chronic diseases such as excitation and forgetfulness and that come with taste loss because taste process retrive memories from mind so sensations factors same mind factors such as acetylcholine and in most times they target acetylcholine to block and that was why nicotine help so what really kill not most pandemics but prepared treatment centers

subs

about tumor cure

disease type

excitatory disease

description

almost all tumors are excitatory disease primarily and even can cause secondary inhibitory diseases such as from fluid retention mineral dilution that lower them but still excitatory disease rootedly but oppressors decive doctors they cause tumor appear inhibitory disease when say have low sodium or calcium despite hypercalacemia was hallmark and even when search what excitatory diseases found almost in all tumors they answer excitatory diseases usually refer to excitotoxicity so they do not say hypercalacemia to not teach people what diseases root excitatory or inhibitory moreover known tumor cure are inhibitory molecules such

as ivermectin and that was ultimate reality proof that most tumors are excitatory disease and even usual diseases that happened on people are excitatory diseases by default and that include high blood pressure and diabetes and seizures and alzheimer and parkinson so do anyone think that tumor are inhibitory disease that was impossible usually because human body excitation easier than inhibition so that is why most diseases are excitatory diseases even small change

disclaimer this is general information the people who want do that they are responsible for their own deeds we are not responsible in any way but we loved to share some benefits

amr alaidrus

do you know ejaculation better than false antipsychotics and have prolonged effects strange facts in this world right

dmso dose lower allowance 1g/kg/day and higher allowance 3g/kg/day and that 1g about 1ml pure dmso 99% and diluted with water if taken orally

ivermectin dose 12 mg or 24 mg per day for one day or

more like week or two weeks or months and that from ivermectin horse paste that contain 1.87% ivermectin 6.08g for 12 mg dose take about 0.650g from that ivermectin horse paste 1.87% 6.08g but do not take all that 6.08g in one time as that not good and for 24 mg ivermectin take about 1.3g ivermectin paste 1.87% concentration

ivermectin 12mg dose from ivermectin horse paste 1.87% is 0.650g

ivermectin 24mg dose from ivermectin horse paste 1.87% is 1.3g

some acetylcholine agonists nonselective rarely cause mild excitation but their benefits overweigh side effects because after many inhibitory receptors activity are restored that will support inhibitory parasympathetic nervous system activity who rely on acetylcholine also known as cholinergic system to suppress sympathetic nervous system and do any know most acetylcholine agonists name parasympathomimetics and that acetylcholine agonists given until known day and that negligible speech because almost all times agonists

work depressants even in overdose cause hypotension regardless liars who name acetylcholine nonselective agonists as stimulants whilst they are depressants

some drugs label have false side effects if human unwanted want that they give bad drug or if visited medical center like from overdose they will cause side effects intentionally and at least mislead people to not know what that drug class is depressant or stimulant that same pilocarpine depressant primarily they lie that can cause hypertension and even in good chlorine dioxide some already advertised that toxic then if human visited hospital from the rare and harmless herxheimer reaction they maybe kill them and say why you take that and some false studies exist they killed them and said chlorine dioxide 3000 ppm 10 ml diluted in 1 liter water killed that human and maybe fake study at all and hundreds of thousands people take 50 ml everyday for over five years and what biggest side effect was flu reaction once in year or more anyway everything good
amr alaidrus

nonselective acetylcholine agonists such as arecoline is not stimulant as most misrepresent that much important system because they are parasympathomimetics primarily from the many inhibitory receptors activation who exceed excitatory receptors count then their effect are depressants even in overdose cause hypotension and slow heart rate so that was ultimate reality proof they are depressants and not cause tumor but heal that because depressant cause parasympathetic nervous system with fluid secretion system and immune system activation all together in integration inspire and their name the triple system

about immunotherapy such as immune checkpoint inhibitors all them were inhibitory molecules include but not limited to genistein or quercetin or resveratrol or egcg or black seed or dostarlimab and that side effects inhibitory diseases such as fatigue and that prove cancer was excitatory disease that treated same others such as seizure or hypertension or alzheimer

what if most vitamins are hidden same cancer cure because corruptors not want strong health for people so you assume they will list all nutrients or keep them known see vitamin b4 unlisted because acetylcholine from their majorest target in history ever and the other inhibitory molecules or sensation molecules such as oxytocin or gaba so human be senseless and that are consist from forgetfulness or unreasonabilty or cry absence or love absence or threat sensation deficiency and be excited and that are consist from hypertension and that same animals and do anyone able take plants such as avocado or broccoli or beets or spinach or cilantro or olive oil or dried egg or raw milk or most allergens and will know something exist and note they need disencourage people how they create allegry diseases or add infections in raw milk and support that with intentional death in hospitals think almost no one dead from infections but except in western country then massive false studies published thereafter such like chlorine dioxide 3000 ppm 10 ml dilution in 1 liter water drinked through months cause ulceration and what they play they remove far organs ultimately dead so that terrorism inspiration was avoid whilst people in

www.cdtestimonials.com and universal antidote telegram community more than one million are drink that regularly and some drink 50 ml every day for years and sometimes they modify plant genes so they become useless such as cannabis converted to hemp anyway if there was war they will not help but people endure always so who be sufficed than people lose additionally see syria freed by their people but not government because separated and everyone lost

antipsychotic molecule are not created same dopamine but binder that bind to things almost just found in the inhibitory receptors such as channel and not activate them but block so that is not just block d2 or alpha 2 or indirectly gaba but almost all inhibitory system parts because what hidden is greater and that name is nonselective inhibitory receptor blocker and that means antipsychotics inspired from the toxins found in nature because nature toxins are the only poisons those have broad target profile specifically from animal venom but that strengthened and moreover about the nonselective receptor agonist ivermectin nonselective channel opener and that understood as gaba agonist and glycine agonist and acetylcholine agonist and p2x4 agonist and positive allosteric modulator for them all in one and god know better

do you know dopamine molecule cannot bind to lot different receptors except antipsychotics

the king rule do not aruge with falsehood people because that help them always and cause around people confused and that is unethical science neutralization and exceptions in rare times if that answer short not overact and you want because this is dangerous trap called query way similar to extraction way and from that matter reasons they give lot delusional speeches and your curious mind begin derive because they still default science source but that all are wrong information so that was trap and on us believe in what we believe until we try and know ultimate reality in earth

about depression there is two types the common excitatory type that usually from excitatory diseases include but not to hypertension and anxiety and muscles overexcitation

known as tetanus or muscle erection prevent human from move but mistaken as fatigue and that why depression excitatory type cured with inhibitory molecules and that was include but not limited to glutamate blockers or beta blockers or gabaergics or magnesium sulfate or lipids such as oils or phospholipids and the second was depression inhibitory type that usually from inhibitory diseases include but not limited to toxins or fatigue or malnutrition and that why depression inhibitory type cured with excitatory molecules and that is include cholecalciferol or iron and excitatory balance inhibitory molecules like b vitamins and excitatory molecules like stimulants and god know best

repair system parts

inhibition

the triple system
parasympathetic nervous system
fluid secretion system
immune system

about tumor types all cured with the triple system activation parasympathetic nervous system and fluid secretion system and immune system activated always together and first type dehydrated tumor and that need fluid secretion system and hydrated tumor and that need repair system use the triple system and what better was all tumor want repair system

inhibitory system are consist from inhibitory molecules such as adenosine and inhibitory neurotransmitters and inhibitory receptors such as g protein inhibitory receptors or g protein other receptors and their binders such as alpha 2 or d2 or opioids and inhibitory channels such as chloride channels and potassium channels and parasympathetic nervous system and anything else cause inhibition are from the inhibitory system

some said if any one cause fluid balance through equal fluid division in human body so fluid enter dehydrated tumor cells and that was cure

most cell death from excitation and accompanied with uric acid or atp release then cells shown acidic like in alzheimer and that was rule

common brain diseases have cell death are from stress that known as excitation not hunger and that was why inhibitory molecules such excitatory neurotransmitters blockers used for alzheimer

why does fruits contain many sugars because fruit use them to keep inside moisturized and that was how does fruit keep themselves moisturized and that inspire sugars are moisture stabilizers or osmotics and that is why their use was laxative

about ivermectin is sugar because that the active ingredient and known as other name macrocyclic lactone disaccharide more specifically oleandrose and that same sugars alcohol

most allergens are fluid drawers to site or channel openers and that activate three systems and in some people cause anaphylaxis and that is include sugars like sugars alcohol and lactose and few sulfur containing molecules such as tricyclic sulfonamides or sulfite

miscellaneous matter

atypical antipsychotics cause chronic artificial fight or flight condition and that name excitation from inhibitory receptors block such as d2 and alpha 2 and indirectly gaba

antipsychotics
d2 blockers
alpha 2 blockers

v

fight or flight condition reversal deficiency

v

chronic artificial fight or flight condition
synonyms
agitation
akathisia

more

about fight or flight condition are balanced and inhibited by g inhibitory protein binders such as alpha 2 or d2 activation and that was the primary way and after that will allow other secondary inhibitory molecules work and that such as gaba

inhibitory system rely on its parts together and that inspire gaba depend on g protein inhibitory receptor binders such as alpha 2 or d2 or h3 and if those receptors blocked then gaba will not work and from that reasons those receptors are fight or flight condition primary turn off switcher then the secondary inhibitory molecules like gaba will wait for

their full activation and after that work to finish inhibition and that inspire inhibitory molecules are depend on each other and if anyone block d2 then will block gaba indirectly and that known in truthful places but most they lie opposite

all their lies to legalize forbidden antipsychotics the ultimate rule was block inhibitory receptor will increase the excitatory diseases such as psychosis or hypertension or anxiety talk muchness and lessness same and about ourself left fda or ncbi or journals science for themself and our science for ourself DO NOT CONFUSE US OPPRESSORS and that speech used as sufficient reply in that false matters unquestionably block d2 and you see how agitated irrefutably block inhibitory receptors evil overweigh untruthful benefits and go ask oppressed patients injudiciously they were nonselective they are have individuals targeted but their poisons given for all additionally if they not want them kill them better simultaneously less sins but they want laugh so nevertheless they will not have what they want contradictory the opposite will happen quickly

most inhibitory molecules such as gaba and opioid will not work in excitatory conditions such as fight or flight time or artificial fight or flight condition like from block d2 or alpha 2 and that prove antipsychotics inhibit gaba

compulsory collapse effect is extra follow exist excitatory diseases such as obsession from repetitive forgetfulness like from high blood pressure or infections and that when human feel missed things and need to do something but unclear and those symptoms are seen in most excitatory diseases such as common obsession or forgetfulness or rfsd but that was additional note

about gout is from stressed cell death that release uric acid from obesity or excitatory diseases cause random growth and that inspire happen in foot or other pressed organs

most antigens protein or glucogenic amino acids or sugars placed on damaged cells and act as osmotics to draw fluid secretion system and parasympathetic nervous system and

immune system for repair and their name are molecular tags from repair label system

idle talk
channels for memory such as acetylcholine gated and gaba gated and ear such as chloride channels and eye and sense as analgesics cause channel modulation and fluid pass and secretion as chloride channel activators for constipation so that cause them from prioritized human things and with the intracellular factors such as dna factors like steroids and b12 and thyroid

selective histamine blockers shown relieve allergy but some what not same who acetylcholine blocker too because both target fluid secretion system as histamine for stomach acid secretion via parasympathetic nervous system stimulation and that latter cause fluid secretion system activation and immune system activation almost always accompany both and that inspire some excitatory factors are able activate parasympathetic nervous system and other systems

about human memory work on fluid secretion system such as ion channels like acetylcholine channels and gaba and glycine channels and chloride channels and intercellular channels and many other channels

immune system rely on parasympathetic nervous system and second prioritized fluid secretion system

base
parasympathetic nervous system
fluid secretion system
immune system

about anaphylaxis was not from immune system alone there three systems activated in that time activate and deactivate same matter no difference parasympathetic nervous system activation and fluid secretion system activation and immune system activation but they are wasteful stick to iga and was not attacked cells and from that not better to name immune system disease but three

systems disease and abbreviated pfid and do one know about known antihistamine benadryl work as parasympathetic nervous system blocker and that shown fluid secretion system blocker and immune system blocker too in most times and that as block acetylcholine

if some allergy people not helped from cold bath or worsen anaphylaxis from catecholamines deficiency like adrenaline as cold bath release them that response to counteract cold water vasodilation or just cause receptor stimulation

about heart failure and that name completely heart failure from stay pump and that inhibitory disease and sometimes excitatory disease too if there was excitatory disease exists like hypertension and not same completely excitatory heart attack disease and that heart failure treated with inhibitory molecules such as hypotensives include vasodilators but not nonselective muscle relaxants such as acetylcholine blockers and that hypotensives were to decrease heart stress so not need lot muscle contraction molecules or energy molecules and not get tired easily and there is

strong difference between blood pressure and muscle condition inspire most muscle relaxants not lower blood pressure whilst muscle contraction molecules depend on blood pressure so hypotensives can work muscle relaxant but mild in most times therefore heart failure treated with hypotensives include vasodilators but not distinct most muscle relaxants like acetylcholine blockers or calcium channel blockers or nsaids also treated with the most muscle contraction molecules such as few excitatory molecules less known to cause hypertension such as choline or calcium or glutamate and some inhibitory molecules depletion such as magnesium depletion

ion channels like chloride channels or intercellular channels not just for minerals but for many molecules such as water and some metabolites and that was rule

fat soluble molecules such as vitamins or agonists like nicotine or paliperidone palmitate or ivermectin have more chance to bind with neurotransmitter receptors and nuclear receptors and that inspire they are stronger modulators and

for tumor and dna modulation

hyperthermia

some use rare sex as depressant so calm down to complete works and that be in drugs level

inhibitory molecules released by each other and that inspire acetylcholine release by d2 or alpha 2 or estrogen or opioid or adenosine and same that for any from them and others and that was rule

what block catecholamines such as histamine will block acetylcholine too in most times

why not take antipsychotics

antipsychotics cause sophisticatodeceptive transient inhibition

how

transportation transient effect
that happen when block beta whilst not arrived yet to

targeted receptors

long term major excitatory molecules sudden blockade who h1 blockade and 5ht2a blockade and alpha 1 blockade that will need time to compensate gradually with unsuitable available higher excitatory molecules like adrenaline in beta or glutamate or sodium and that absence substitution effect

second complication

long term inhibitory receptors d2 blockade and alpha 2 blockade

results after days from just either alone

long term as long as excitatory molecules blocked human body excitation restored bad and
return better when h1 and 5ht2a and alpha 1 back and more when d2 and alpha 2 back
long term as long as receptors blocked torture
long term as long as receptors blocked akathisia

done that was proof ask who take that and that take who ask proof was that done

why they do that because they assume targeted population shit and they caused most people be in that psychosis then that was to increase disease and for torture and even if not have psychosis if there was true medicine will help anyone usually and that as inhibitory molecules supposed be tranquilizer and anxiolytic and obsession suppressant and antipsychotic and memory helper and moreover not same hypertension people without unwanted side effects 25:31 the noble quran

how antipsychotics cause transient inhibition when alpha 1 and h1 blocked suddenly human will be inhibited and during that body start compensation process with other excitatory molecules gradually but cause diseases and that absence substitution effect

in these days treatments warranted

introduction
choline need dihyrdogen monoxide in human body to work and that achieved by oxidane supplementation and in rare time not body due to ingestion inability and that is further need intubation in denmark

most times you read things frivolous not big and not needed even and you assume they are sophisticated and important and this phenomenon frequently repeated and will happen serious number times and that was science today and that wisdom rule

most thin people unable gain body weight lived in fight or flight time or excitation or worry from childhood

nutrient system are nutrient procession system and nutrient transportation system and nutrient storage system and nutrient utilization system

why excitation induce insulin disability and cell regeneration system include immune system or parasympathetic

nervous system or fluid secretion system disability and nutrients like glucose utilization or nutrients procession system activation and growth random or unrandom because during excitation or so called fight or flight moments human body want more energy then will utilize stored nutrients and prevent nutrient storage or lower or detoxify as general rule during that time and there is difference between storage and utilization then exception for nutrient utilization which also used for growth and that was include insulin prevention to not lower glucose and the second thing is human body not want any shortage during that time then will block repair factors and that from nature human body language

inhibition

oxytocin is normality or balance measure for safety and that blockers use rely on human if was for good purpose god will fix that and will have lot benefits and if was for bad purpose will lead to secret destruction and will have lot abnormalities and that was what god promised we do not say good words always to you same other strayers there is god and account

most antipsychotics are block the low prioritized excitatory neurotransmitters such as dopamine d1 and serotonin and histamine and that even without block inhibitory receptors such as d2 or alpha 2 will cause human body to substitute with other excitatory neurotransmitters such as adrenergic or glutamate or sodium or calcium because more abundant and that antipsychotics not affect except tiny part from the

receptors and leave many majors and that is called absence substitution effect and will cause excitatory disease such as hypertension or restless legs syndrome or tetany and about why happen because most excitatory molecules deficiency dependent inhibitory molecules and when absent body will substitute with others but unsuitable and cause excitatory diseases and that is seen in hypocalacemia cause tetany and dopamine deficiency cause restless legs syndrome from substituted adrenaline toxicity and glutamate and others somewhat and that inspire there is two matters about antipsychotics not just inhibitory receptors block

what plants found to be potent similar to benzodiazepines

search

example
what help pcos
what plants used for schizophrenia
what alkaloids used for psychosis
what plants used for pain
what plants used for fever
what plants historically used for hypertension

soy lecithin product bought in the united states of america was not have effects and that inspire brain effects disabled from gmo and that compared to sunflower lecithin was with effects

cell tag factors like ubiquitination disabled in most diseases such as ulcers and tumor and aging

coronvirus cause taste inability because acetylcholine blocker

forbidden supplements in usa

choline
explanation
original form not disabled chemically like pseudo cobalamin and without bulkers like silicon dioxide or paradoxical effect inducer acid like bitartrate or others but not choline chloride

acetylcholine agonists
betel nut
pilocarpine
arecoline

dag
explanation
from uses to produce phospholipids for acetylcholine

glucose
explanation
dextrose but not glucose and from uses boost glycogenesis

and glycogenolysis and that produce pyruvate to coenzyme acetylation and amino acids like serine for produce choline

cbd

acetylcholine receptors not preferred in excitatory diseases to block or activate except conditionally such as for reverse blockers caused dementia because there is more important than that such as adrenergics or glutamate prioritized more and that inspire was not standard and when blocker is used cause forgetfulness and that increase madness

about wrong synthetic drug cobenfy

for excitatory diseases such as psychosis

acetylcholine receptors are not prioritized in most excitatory diseases except sometimes such as cure toxic blockers with agonists and that reversal purpose in

forgetfulness diseases or cure toxic activators with blockers and that antagonism in poison diseases either are used temporarily

wrongfully and unreasonably and in bad intention mixed two contradictive things agonist and antagonist and do you wait for effects that completely gross negligence prove playness clearly same chlorine dioxide matter level

xanomeline

tumor

constipation

urine retention

neurotransmitters agonists are not better for long time use

when opioid agonists used their effectivity decreased over time and that require more dose called tolerance and have dependency when not taken shown agitation and pain and even when taken cause paradoxical effects all that happen over prolonged time and when dopamine d2 agonists used for restless legs syndrome or any other disease their effect declined over time and that required more dose until cause paradoxical effects and that is inspire stopped work totally and caused opposite expected effect over time and that is inspire g i and g o binders such as d2 or alpha 2 or h3 or h4 or m2 or m4 or opioid all those are inhibitory receptors and their agonists or partial agonists cause paradoxical effects over time

about matter the first reason they deplete direct inhibitory molecules such as potassium and cgmp and estrogen and other inhibitory steroids and lipids like dag and the second reason they cause receptor overactivation and for example when d2 agonists are used they cause d2 receptors and g i and g o overactivation and when receptor overactivated will not be repaired and that cause receptors destruction totally

and from that body be without those inhibitory receptors at all and not get even that old relief and that what called over time paradoxical effects

that inspire neurotransmitters agonists not for long time but for reverse older blockers such as after most antipsychotics because most synthetic blockers not removed naturally ever except by many years or agonists and that inspire excitatory receptors blockers better than inhibitory receptors agonists for almost all excitatory diseases conditionally

rauwolfia root powder contain 0.25% reserpine dose rauwolfia root powder 0.25 gram contain reserpine 0.6 mg same drug prescription for two weeks and after that lower dose to 0.05 g rauwolfia root powder every day or some times for maintenance

fluid secretion system activation is same parasympathetic nervous system and that was not inspire parasympathetic nervous system would not be activated along sympathetic

some diseases like anaphylaxis mistaken iga meditated but from excessive parasympathetic nervous system activation because that activation with immune system activation and fluid secretion system activation or from excessive immune system activation with parasympathetic nervous system activation and fluids secretion system and that appear inhibition toxicity like hypotension or hypoglycemia

parasympathetic nervous system have inverse relationship with sympathetic nervous system and that is inspire when sympathetic nervous system activated is cause excitation and that block memory and already appear in usual times and when parasympathetic nervous system activated with sleep or depressants or parasympathomimetics also known as cholinergics such as acetylcholine agonists or choline or lecithin that will suppress sympathetic nervous system and improve memory and activate immune system and secrete fluids and that was why choline supplements improve the memory

nitric oxide not just vasodilator but muscle contractor and seen in penis erection and bronchodilator

about anaphylaxis airway vessels they were vasodilated but that vasodilation type is called obstructive vasodilation and that because those tubes are more tender than others and for quick gases passage or inside tender and wet place and if there is no muscle contraction molecules and other name is vasoconstrictors such as excitatory molecules commonly

tyrosine derivatives like noradrenaline deficiency will cause obstructed dilated bronchi tubes from organs spontaneous pressure surround them but not muscle tightness surround them hypothesis because no muscle contraction molecules fundamentally for all them and that obstruction because no muscle contraction force around tubes for erection so that appear that bronchodilation

why they named bronchodilation because when they used most vasodilators not dilated bronchi tubes but cause the opposite constriction and misunderstood that and called for separation and new terms but they do not know that bronchoconstriction name obstructive vasodilation and bronchodilation name expandful vasoconstriction and in third vasodilation subtype that seen in penis erection from nitric oxide expandful vasodilation or small from minimizeful vasoconstriction like from cold water release adrenaline and that inspire vasomodulation had completely different effect depend on organ therefore we prefer take term expandful vasoconstriction substitute for bronchodilation and other obstructive vasodilation rather than bronchoconstriction and vessels substitute for tubes

because same thing as containers have liquids or gases no difference and for example some vasodilators are cause for obstructive vasodilation and when adrenaline injected will cause erective expandful vasoconstriction in airway vessels

tubes

↓

vessels

bronchoconstriction

↓

obstructive vasodilation

bronchodilation

↓

erective expandful vasoconstriction

older terms foldable or pressable or pressive or obstructive vacuumable vasodilation or negative vasodilation or erectile expandful vasoconstriction or positive vasoconstriction

about copd hunger or starvation yield effects prevention such as muscle breakdown or lipolysis or ketosis like with neurotransmitters blockers cause obesity or rich protein and lipids diet and antioxidants prevent need for muscle breakdown

about inhibitory disease anaphylaxis in that body not have excitatory molecules for muscle contraction to breath in or breath out and that same ejaculation want catecholamines such as noradrenaline or oxytocin or acetylcholine for fluid excretion and that inspire correct name was lung paralysis from muscle excess relaxation and supported from muscle contraction factors deficiency and same that happen from

depressants overdose like beta blockers and acetylcholine blockers cause lung paralysis appear same what they refer to anaphylaxis reaction and that inspire there was no need for bronchoconstriction or bronchodilation false terms and that because muscle matter not less and that correct term obstructive vasodilation in bronchoconstriction or erective expandful vasoconstriction in bronchodilation and anyone know adrenaline vasoconstrictor in any site and god know better

some vasodilators are bronchodilators too and for example gases like nitric oxide and vasoactive intestinal peptide and but not every vasodilator are bronchodilator

inhibitory molecules direct actors
potassium
cgmp
parasympathetic nervous system activation factors
acetylcholine
magnesium
estrogen

inhibitory molecules direct effects

g protein inhibitory activation
g protein other activation
adenylyl cyclase inhibition
camp reduction
calcium channel blockade
potassium channel open

respiratory depression two types

inhibitory diseases
asthma usual type
anaphylaxis usual type
inhibitory molecules such as magnesium or acetylcholine agonists overdose because they cause parasympathetic nervous system activation and that is inhibit sympathetic nervous system with beta 2 receptors activation and that cause bronchoconstriction

excitatory diseases

serotonin syndrome

when lipids taken noradrenaline released more for lipolysis and when unusal nutrients like allergens taken histamine or acetylcholine released more for fluid secretion to push that irritable contact as seen in capsaicin runny nose and that is overactivated selective inhibitory histamine or acetylcholine receptors in excessive amount and that is parasympathetic nervous system activation by acetylcholine and that inspire catecholamines or acetylcholine inhibitory receptors such are m2 and m4 activated excessively in allergy people and inhibitory receptors such as alpha 2 and d2 and h3 and h4 and m2 and m4 blockers or negative allosteric modulators for allergy anaphylaxis prevention

some said about mostly excitatory and somewhat inhibitory molecules such as arecoline from betel nut for addiction but they said that in bad faith because excitatory molecules not good standard for cure addiction except conditionally when appear clearly and god know best

betel nut but not arecoline cause mouth diseases if that contaminated or overchewed same khat in yemen cause same thing

same chlorine dioxide and antipsychotics and excitatories for dementia and vaccine exposed matter level in this time some satans said about arecoline is carcinoshit whilst that acetylcholine agonist cure tumors and seen in nicotine and some antiparasitics or dewormers such as ivermectin used for tumor and why said that because from tumor causes is fluids secretion factors deficiency see in that dry cells and that acetylcholine are from bigger fluids secretion factors and one see acetylcholine agonists are used for dry eyes and they lie arecoline carcinogenic oppositely so people stay away completely from that cure or not suspect ever because most people want cure for disease from disney world not labeled with any thing bad even if that is false thereof was smart trick as usually walahi ya brother and about tumor cure not by single way but many ways and from them some mild poisons and immune therapy and unquestionably they did wrong and defame substance

helpful for overall benefits and they acted in bad faith moreover they discriminate arecoline while similar to nicotine but better than nicotine in diseases such as dementia and dry mouth and tumors from secretive acetylcholine blockers or for infections treat corona additionally more than 600 millions people consume arecoline but not caffeine or nicotine or cathinone in southeast asia and not heard about that

our rule
whatever they say do opposite exactly even if that will cause death less bad than follow liars and unethics and satans such are fda or ncbi or doh

fortunately seen good
almost all times include but not limited to chlorine dioxide and inhibitory molecules in opposition to what they advice wrongfully such as excitatory molecules like mao inhibitors or stimulants for memory diseases because excitation bad and preexist in almost all diseases and they are advice for more excitation and that crime clearly but courtsproof so any one do not distress yourself and wait for god justice

if they said take vitamin c do not take that because that excitatory and cause heart diseases

if they say take vitamin d do not take that because that excitatory and cause hypercalacemia then hypertension

if they say take calcium do not take calcium because that excitatory and cause hypertension then agitation

why
does hypocalacemia cause excitation most times because human body will use other excitatory factor but unsuitable like glutamate for cover then will cause excitation and that is called absence substitution effect and that why calcium considered deficiency dependent inhibitory molecule and primarily excitatory molecule

if they say calcium was effective from among supplements during trial for tumor prevention do not take that because

most tumors are excitatory diseases with hypercalacemia and that early sign for tumor sometimes

if they take stimulants for addiction diseases do not take them because excitatory molecules and those excitatory diseases not prioritized way ever and almost all times will lead to more diseases

if they say about most things such as sugars alcohol are increase tumor do not believe that why because they are osmotics that fluid secretion system activators and helpful

they say

sugars alcohol cause tumor

translation

sugars alcohol help tumor

if they say phosphorylation increased in tumor do not

believe that because that from repair tag system same ubiquitination used to tag damaged cells for repair and inspire phosphorylation deficiency in that disease

inspire sugar increase tumor

translation

sugar help tumor because osmotic

if they say do not take chlorine dioxide to us we will take and already taken that and have much benefits

if they say take uridine for dementia do not take that as excitatory molecule and will cause more forgetfulness and we taken that already and have agitation and insomnia and forgetfulness and that seen in ncbi! yes will happen multiple times and that have title uridine have restorative effects in alzheimer come to check right now before secretive study deleted

always we use oppositism rule and have fabuloustic results by god permission

in your mind should see fda and ncbi and doh among dmt and lsd and pcp they are identical create deceptive reality and by that is that considered psychedelic as psychedelic yes and yes they are they are and the answer the answers and make you happy o citizen myself with effects moringa lasting more cost efficient in physioletc we not specialized in their bulkers and they are same like religion exceed the power and that because they are not show clear science but rather stay active in fight disease cure and command people not take that cure without truth explanations and oppressed most sellers such as mms and their family for label mms cure not water purification in many years they appear evils explicitly what a shame and second thing if personal human want test in any lab require prescription why to deprive unwanted people from heal as me stayed years find them order tumor test or whatever was unable and third thing they give good things to some people but bad things to anyone hated and that include bad advices

and counterfeited drugs same what given to me they are obligatory political and commercial religion simply gangs not different than their gangs in new york street outside

all without mercy
without need and that what bad deed why no one benefit but strayers and for every thing accountance in this worldy life and afterlife rest assured not me or people but god from what they unestimated such as foreign wars or from leaders themselves between each other from repetitive examples in chapter 28:59 and 59:02 quran

every thing predestined
same we are in movie without mentionable free will ever as appear and after death may god let us enter paradise and already have personal movie and known everything that if humankind were free truly would not do all that in life but god controlled everyone to do what want until death and true free will in afterlife and humans come from unseen should believe in unseen and anyone collect islam and called qadar and judaism and you will see that proof

catecholamines blockers not able cause toxicity or death because other excitatory factors exist such as glutamate and that is frequently happen in narcolepsy sleep attacks from catecholamines and glutamate deficiency and wake after that healthy but glutamate alone not able work long time then will cause tiredness and even sleep

most plants are unknown proteins and they say to them as alkaloids and that is why they are effective because broad spectrum modulators and most times coincide adrenaline blockers and acetylcholine agonists and opioids they are strongly enough and without them pharma giant will not learn that exclusive superpower of plants must treated same chemical hazards some poison superpotent and others same in work but for cure who do not know see plantkind none and the strange thing whilst their protein from them but dissociated verily from pharma ads and if one look to essiac bureau and no difference between the plants and minerls rocks both elements found in earth but plants suppressed but some light reached people cannabis

and opioids and magic mushroom

for not get deep in medicine sometimes human read gene code numbers and want know what that language and ask and that frivolous simply and not possible and overact and shit of course and if human die better than that and will go paradise and leave every thing in that time and even some people sick they do not want take any thing despite cures available and many have health killed themselves do not want this life and that inspire return to older treatments they are effective enough then matter ended why stay inside medicine search and that wisdom rule after we witness negligible things such as gtpases and even if explored things for that target that are not standard abandon alpha 2 agonists and d2 agonists and vmat blockers and glutamate blockers and sterilizers and vitamins and minerals and nutrients with such thing unpleasant sounds right so take that advice return tomorrow to older things charm that the maximum humankind will not enter paradise from take pill and ultimately read that enough until your phone turn off common response you will not overact in search again

except sometimes that forced from creator powers for wisdom such as there is something you did not know yet and every thing predestined and this may be sign for new predestination such as titled upgrade and not accidentally

cry supporters not bad for act only but sometimes humans have diseases and deprived from cry after chronic calamity and have message to deliver that not good except with tear in meet such as consolation or record and world how much need someone crier because honest and revive hearts and teach not every one excitatory that was overstimulate and everything with good intention same take water for overall benefits to themselves and others and nothing bad exists and that rarely used and from medications angle

cry inducers
parasympathomimetics
depressants
onion products mixed gas far spray

cry inducer cholinergic parasympathomimetics take before time from scene cause tear during that

low albumin from binders deficiency such as calcium and estrogen

in cobenfy they found stimulant similar to nicotine and that have stimulation and inhibition because most acetylcholine agonists god dropped in earth plants shown excitatory and sometimes inhibitory why because acetylcholine receptors not preferred for excitatory diseases cure and no need for find selective m2 agonist to treat schizophrenia but older receptors do same thing exactly turn stable body lights throughout g protein inhibitory activation and g protein other activation that was m2 or m4 or alpha 2 or d2 or opioid direct effects and even g protein inhibitory or g protein other direct actors adenylyl cyclase inhibitors followed with calcium channel blockers and potassium channel openers and that inspire human should not do

bidah and return to priorities and roots and that by god permission and if was not that all humans would be very intelligent and god not want that because not good then cause poor and rich and misworked and successful and sick and robust and younger and older that god interfere was for this worldy life balance and every one inventions predestined in this life same money and any predestined inventions or successes will happen easily without efforts inavoidably and that is done with ultimate power organize every thing and if those not predestined will not have ever and that what abraham religion revealed so everyone rest assured

vmat2 blockers may be cause agitation from monotherapy negative effects not with vmat1 blockers same reserpine and human chosen worse thing that plants not chosen selectively vmat2 that is primarily store dopamine and inspire vmat2 blockers act as dopamine depleters that cause excitation toxicity from the absence substitution effect covered with unsuitable excitatory molecules like adrenaline or glutamate and that vmat2 is found in brain

more and not peripheral same vmat1 and that show best standard was natural reserpine not cause any excitatory diseases and used for most excitatory diseases such as hypertension and psychosis and dyskinesia or akathisia

vmat2 blockers if cause agitation from take late after catecholamines elevation and helped with take earlier during morning or that was from monotherapy negative effects when given vmat2 blockers alone cause imbalance and common vmat1 blockers and vmat2 blockers such as reserpine not cause any excitatory diseases or that from storage prevention cause accumulation in cytoplasm and that have local effects and systematic influence and that especially if have mao deficiency and that still falsehood not acceptable ever then they misrepresent

catecholamines depleters in original form cause inhibition and from their name they lower adrenaline and when that happen appear inhibition and sleepiness and hypotension mildly and used for all general excitatory diseases such as hypertension and seizure and dyskinesia and akathisia and

agitation and pain and psychosis and anxiety and evildoers said vmat2 blockers side effects have akathisia whilst used for dyskinesia and no any difference between akathisia and dyskinesia and restless legs and extrapyramidal syndromes all same thing and that mislead to deprive akathisia patients from use them with potent psychological terrorism and also simultaneously they are already prepared about two vmat2 drug versions the first original and other counterfeited and drug side effects label added agitation and insomnia and akathisia and when someone is hated ask they give bad drug version and already compatible with label facts

vmat2 blockers
completely inhibitory never cause excitatory diseases and their way clear and simple and compatible with intellect forms
original
couple versions
originally unrelated side effects added in label
akathisia or agitation side effects added falsely

↓

targeted individuals most them forced take antipsychotics and have chronic akathisia if see that vmat2 for dyskinesia the confuse name for akathisia and restless legs syndrome and extrapyramidal syndrome and from their side effects is akathisia falsely added they will scare and loss that interest forever and that was smart trick

↓

if patient are hated want that drug they will give poisoned version

↓

that patient who taken fake drug will have opposite effects to therapeutic effects and will be excitatory not inhibitory and cause akathisia and agitation and that already bond provocatively in drug label

↓

no one know

↓

explanations among scientific community yes vmat blockers completely inhibitory but the drugs tend to act excitatory in 12 am or when the human play football it could be probably right Michael that psychological effects and mechanisms of actions are unique never seen like that in my life!!! nat geo called

fluids secretion need some muscle contraction molecules same ejaculation need oxytocin

for neurotransmitters receptors regeneration more healthy what breakdown dopamine will break dopamine receptors for receptors regeneration and if there is excitation toxicity such as alpha 2 blockers overrelease catecholamines that prevent mao activation or exceed that ability and will keep neurotransmitters receptors activation and without repair them with breakdown for sensitivity renewal and that will lead overactivated catecholamine receptors to fade over

time and whatever agonists given will stop work because receptors enough inactivation is needed for regeneration and same thing are seen in chronic opioids use over time cause opioid receptors activation will not be regenerated because not stopped for regeneration and that ultimately lead to fade gradually and that are known desensitization and in every time need more dose until not work at all and for example alzheimer people are already have excitatory diseases and include mao deficiency all have same effects hypertension or mao deficiency or heavy metals toxcity all are same thing kept excitatory neurotransmitters activated and they are in loss gradually already and some given mao inhibitors wrongfully and that will complicate their diseases and that inspire if dopamine are not brokendown effectively dopamine receptors will not have breakdown and that also detoxify irreversible binders

opioid receptors and may be adrenergic receptors and dopamine receptors and others not named correctly in harmony and most people around the world are rename them because unusual initials such as alpha may cause

randomilty open in mind and consume much resources solved with neutral names such as adrenergic here the human remember whole adrenergic matter more firmly followed with alpha and end with receptors and that is pending think terminator same say case closed notify human finish no need for think

dipeptidyl peptidase 4 inhibitors direct effects
peptides clearance inhibition
opioid op3 receptors activation prolonged
glucogon like peptide 1 receptors activation prolonged
incretin elevation prolonged
insulin release
glucose synthesis inhibition
blood sugar reduction

dpp iv

what ruin multivitamin inhibitory effects are vitamin d and vitamin c and vitamin a and synthetic inactive vitamins and calcium and chromium and manganese and copper and iron also unwanted ingredients such as common unrelated acids like citrate and bitartrate and picolinate and plants such as pepper extract and aloe vera gel and artificial

sweeteners and microparticles such as microcrystalline cellulose and silicon dioxide and other bad things and misformulation nutrients overdose all them cause paradoxical effects powerful excitation unquestionably kick you from the medicine while truth on other side and god know best

tumor from excitation toxicity that prevent immune system activation or exceed repair ability

cyanocobalamin less effective in most patients and cause transient overstimulation as someone take methylcobalamin and adenosylcobalamin and have inhibitory effects lowered blood pressure and tremors and improved memory similar to phospholipids and appear their substitute and as the rule never be happy with one nutrient complete others follows god rule god will not let you rely on one thing

insulin inactivation shown insulin resistance from excitation

because during stress events adrenaline released and that release glucogon to release glucose for energy and prevent insulin from lower glucose during that emergency time and inhibition and that supported with beta blockers or alpha 2 agonists or magnesium for insulin effectivity and that is not what they said false knowledge verily about adrenaline are bind to alpha 2 for insulin inactivation in time need glucose such as stress but that are already bond to beta receptors and they used that false addition to mislead not take alpha 2 agonists and generally insulin factor is inhibition and that alpha 2 receptors inhibitory and that inspire insulin inabilty from excitation such as from excitatory diseases and need inhibition such as with cure excitatory diseases and supply inhibitory molecules and god know best

endogenous dopamine blockers are some from receptors themselves such as d2 and adrenergic blockers from their alpha 2 receptors

anaphylaxis from hypoglycemia as epipen release glucogon that release glucose and that means take sugars help

imidazoline receptors i1 and i2 and i3 are adrenergic alpha 2 receptors subtype

nothing else

most people have penis growth deficiency and erectile dysfunction and switch want from other human entertain them in some countries from excessive inhibition such as not talk enough and excite and walk and from overstay in home cause vitamin d deficiency and calcium deficiency and from iron deficiency and chromium deficiency and inhibitory drugs oversupplementation like nsaids and magnesium and not stimulate penis regularly from childhood with masturbation for growth gradually conclusion calcium and vitamin d usually enough additionally iron and chromium and msg salt that widespread in daily foods help and ensure energy molecules such as lipids like from fish oil or any oil commonly stronger than sugars and bicarbonate

most molecules go acetylation like choline such as carnitine and broken down to tma

about alkaloids or n glycosides or whatever other nitrogen containing molecules all same amines and amino acids and proteins such as glutamate or gaba or dna or rna or vitamin

b12 because they are nitrogen molecules and that establish nitrogen containing molecules such as that listed are broad spectrum receptor modulators and broad spectrum protein modulators or broad spectrum receptor reseters and broad spectrum protein reseters or universal nonselective protein modulators why as almost all live organisms rely heavily on nitrogen such as human rely on proteins and that nitrogen containing molecules include but not limited to amines or amino acids or proteins or alkaloids or n glycosides also known as glycosylamines or others all same powerfully bioactive or psychoactive in almost all times and their usage for exemplification are reserpine for high blood pressure and laetrile for tumor and even caffeine is for fatigue and all them should be exist in two types either excitatory or inhibitory and from god neutral nature not leave much excitatory alkaloids in earth and thereof most plants in earth were inhibitory alkaloids and god know best

interest facts

do you know caffeine cure drugs diseases such as anuria or

constipation or inhibition and that is why receptor reseters

do you know most drugs work strong receptor modulators such as blockers or agonists that from adrenergic blockers and opioids and calcium channel blockers until vitamins and carbohydrates and stimulants inspired first from plants and derived from them then do not unappreciate them and this in first hand poison if taken dead unquestionably and this cure if taken cured unquestionably and that is difference supportive evidence to treat them seriously

regardless

mislead unions includes but not limited to most bigger pharmaceutical company and ignorant fda all shown plantkind nothing and that to shift look to their own products specially forever without plants and from aforementioned their newer name bad dispensers discriminatly grant whoever they want and deny whomsoever they want and is it diseases trade unquestionably what bad trade that anger god counterproductively bring calamities in this life nonselectively on all willingly parties or country

comprehensively from god speech 08:25 quran

fluids secretion factors and immune system activation factors and parasympathetic nervous system factors everything same and from them inhibition and that is happens with healthy inhibitory molecules levels and excitatory molecules blockers and that such as beta blockers or catecholamines release factors blockers

some think beta blockers not way and from reasons excess adrenaline accumulation and that inspire better with either begin factors such as precursors or production or release prevention and that is can happen with healthy inhibitory molecules levels such as inhibitory neurotransmitters or inhibitory steroids such as estrogen or progesterone or allopregnanolone or end factors such as mao and dao activation and story end like no adrenaline were exist without need for extremely artificial molecules state unavailable in plants unlike maybe suitable blockers available in plants such as orexin blockers

steroids universal nonselective modulators change every thing in human body and bind to almost all receptors for activation or blockage and if someone missed receptor modulators steroids are involved there and that proof imagine testosterone overexcitation and hair growth unquestionably single molecule for males look and cholecalciferol helps orexin and allopregnanolone strengthens gaba and that shown them universal nonselective modulators as universal nonselective activators such as excitatory steroids and universal nonselective inhibitors such as inhibitory steroids like allopregnanolone and estrogen and even progesterone

some relief from excitation after eat food from hunger molecules elimination and that decrease orexin release that keep release catecholamines and every thing lead to less excitation and more inhibition

antipsychotics block dopamine and dopamine blockers

common antipsychotics block dopamine and serotonin with large amount for prolonged effects time and small dose for histamine and noradrenaline and acetylcholine and block natural human body dopamine blockers such as mao and alpha 2 activation and inhibitory neurotransmitters factors

invega sustenna administration

antipsychotics

facts

not invented but inspired from spontaneous toxins found in nature specifically animal toxins and strengthened because the nature toxins are almost the only type have broad target profile and every time teach big pharm

ingredients

pyridopyrimidine based molecule
benzisoxazole based molecule

synonyms

fluorinated benzisoxazole based molecule

description

privileged structures

two types exist common privileged structure bad type or negative type or excitatory type and uncommon privileged structure good type in antipsychotic was the bad type that have passage or modulation power

some versions include but not limited to

paliperidone
Risperidone
lloperidone
perospirone
lurasidone
ziprasidone
azaperone
ocaperidone
aboutusiamdone
furtheroidones
telloyourselfidone

description

all are same even if they not mentioned some effects in any of them and why because they are all benzisoxazole based molecule or their similar benzisothiazole based molecule or pyridopyrimidine based molecule and the only difference is happend when they just tweak their edges and that create unlimited drugs so they are able flood earth with thousand drugs in short time because that manufacturation process are tweak way but not invention way and that is scheduled

about similar molecules

description

related to them have same composition or close and that include far relationship then still prove our ultimate reality experiences despite the concealation or false decoration

benzisoxazole based molecules
brominated benzisoxazole herbicides
fungus isoxazole mycotoxins
ibotenic acid

pyridopyrimidine based molecules

marine alkaloid cytotoxins

batzelladines

crambescidins

organofluorines

organophosphates

sarin

antipsychotics primary effects

nonselective receptor modulator

synonyms

first

nonselective inhibitory receptor blocker
chloride channel blocker
potassium channel blockers

collectively

inhibitory system blocker

inspiration

d2 block
alpha 2 block
gaba indirect block
oxytocin block
excitatory diseases
agitation
hypertension
akathisia

second

nonselective excitatory receptor agonist

calcium channel opener
sodium channel opener

collectively

excitatory system agonist

inspiration

d2 block
alpha 2 block
gaba indirect block
oxytocin block
excitatory diseases
agitation
hypertension
akathisia
privileged structure good type sulfonamide benzisoxazole opposite effects expected so if that work sodium channel blocker so privileged structure bad type like antipsychotic analogs expected cause opposite effects such as sodium channel open

vitamin b2 deficiency
vitamin b1 deficiency
vitamin b7 deficiency
vitamin b5 deficiency
magnesium deficiency
sulfate deficiency
selenium deficiency

zinc deficiency
protein deficiency

note

supply strictly normal dose natural activated vitamins or minerals in chloride or sulfate form not other acids even citrate because they cause paradoxical effects and avoid excitatory molecules such as vitamin d or calcium or acids

dysbiosis
ignorance not healed

show ultimate reality most them in markets they are oppose goodness and torture poisons outrightly without a modesty and that was god trap i swear by god i am god messenger to you you do not know what you did

inhibitory receptors alpha 2 their blockers are same animal venoms or d2 receptors blockers or m2 receptors blockers cause agitation and unrelated in excitatory diseases cause and in good opposition they are adenylyl cyclase inhibitors or calcium channel blockers or potassium channel openers reduce excitation and cause tranquility and that is ultimate reality proof about almost all named antipsychotics are for torture or play or evil because targeted populations almost all are targeted individuals and unwanted peoples and i am first labeled from the united states of america government tortured me for years evildoers they use them bioweapons outrightly and additional proofs for prove i am not lie about there is about two antipsychotics types in this world one is for torture and other is for treatment but not cure and seen in some antipsychotics such as partial dopamine receptors agonists and alpha 2 agonists and any one see oppositions previous false antipsychotics are opposite to what claimed better antipsychotics and about what truest antipsychotics are any inhibitory molecule simply those used for excitatory diseases like hypertension or anxiety or seizures or adhd or others for that exemplification inhibitory molecules such as glutamate blockers and beta blockers and alpha 2 agonists

and histamine blockers and magnesium and cobalamin and pyridoxal phosphate for excitatory diseases include but not limited to hypertension or agitation or psychosis or seizures or anxiety or restless legs or what ever show overexcitation and that was secret rule in medicine god guide me and that name was inhibitory molecules for excitatory diseases and excitatory molecules for inhibitory diseases and most the doctors familiar with that but not identified that astutely even some maybe still wait for fda to approve drugs for newer excitatory diseases and not grant except what destined for that disease and for example psychosis ignored high blood pressure that fuel for excitatory diseases include anxiety and some them jump to antipsychotics instantly and may god bless you

antipsychotics block catecholamines and catecholamines blockers and seen after time effects disappear and cause human depend upon exogenous catecholamines blockers and that was evil trick and inspire yes we block dopamine and dopamine blockers too and those are exists in human

for clarify and that administration happened in first day to have later in future excitation and return to antipsychotics so have mild inhibition in that day and after time that drug inhibition effects disappears and already acquired internal dopamine blockers deficiency cause excitation and return for poisons so be disrupted and dependent and consumer and may be not all them but almost all them bad and i did not seen someone take them and have health or returned same before after that and god know better and may god bless you do not read if you are urgent or overstimulated ever we talk here with tranquility

not every hyperinsulinemia is insulin resistance but work effectively and still elevated as beta 2 agonists induced hyperinsulinemia insulin nonresistance type and hypoglycemia

hypercalacemia from excitatory diseases such as hypertension from adrenaline and that from beta 1 activation and beta 2 inactivation as beta 2 agonists induced hypocalacemia

magnesium daily recommended dose amount 500 mg from foods for long time safe and may be from supplements safe too for long time

not exceed two times or three times and taken separate not together for two weeks to correct magnesium deficiency

then

epsom salt daily allowance 5 g contain 500 mg magnesium

magnesium toxcity cure with excitatory molecules such as salt or msg or calcium or cholecalciferol or adrenaline or stimulants

someone ask how much epsom salt for detoxification

answer

general rule for the forms or formulations or preparations for example epsom salt and similar minerals combinations

dose amount never estimated from them but from minerals amount suitable for recommended daily amounts then leave search about epsom salt doses forever but know how much minerals content in that and administrate calculated epsom salt grams in compatibilition with recommended daily dose especially for concerned minerals such as magnesium not sulfate and that appear for epsom salt 5g daily allowance contain 500mg magnesium suffice 100% daily value dose

diabetes
male molecules toxicity
excitatory steroids toxicity
androgens toxicity
female molecules deficiency
gut dysbiosis
mouth dysbiosis
gut molecules depletion
protein hypercondition
ptms deficiency
methylation deficiency

sulfurylation deficiency

n acetyl cysteine given to produce sulfate and thiosulfate as active ingredients for acetaminophen toxicity

by allah name the entirely merciful and especially merciful i take rule for cure diseases and that is give simple nutrients for human body processes such as minerals or vitamins or lipids or protein or probiotics all found usually in abundant foods then rest assured we know them well and any thing for suspected poisons detoxification such as temporarily chlorine dioxide or edta or acetyl cysteine or methionine and the latter in extremely rare times almost not given in existence and end suspected continuous toxins expose from unhealthy foods or around people with move from place to different city or country especially if they same myself targeted individual and that are more guaranteed way for cure because i do not know what i eat even most supplements counterfeited not virgin and that cause very much confusion but thank god for guidance and avoid get deep in supplementation or replenishment or replacement

or whatever strictly ever do not supply other than minerals or vitamins or lipids or protein or probiotics or in rare times hydrochloric acid or hydrolytic enzymes and avoid such as glycine or taurine or camp or sam e or msm as you get very deep and what is missed is just have dna printer and supply every minute from that or get inside your body and ask that what missed and what you left for god and what god create are that human or we need supply ingredients manually and stay away from deepness and do what you can and god will fix every thing and in closer paradise human health perfect and if one go deep be deep and supply every thing or then may create distress from usual imbalance same drop mass in one side other body parts get very annoyed and may be deplete fuel was stored for something and that will disable its procession when exist and need time for replenish and that dangerous disability like not know that molecule and what said when give glycine have transient good effects from forcible processes and that false and illusions and negative because every thing negative contradicts god wisdom cure are easy and god messenger muhammed speech there is no disease except have its cure know it whom know it and ignore it whom ignore it and in resume

and avoid plants extracts because they will not help lot in most times and not cure standard except in rare times that not given for eight billion humans and if one want plants are not seen supplements but from basic things natural healthy diet and foods and water and sleep then about plants from natural healthy diet so unrestricted because not from that supplementation window except their extracts and about that prohibition because overact and hold your rules and you will success and may god bless you and your family

amr abdelwase alaidrus

sodium sulfate have short half life in body and for detoxify and not correct sulfur deficiency

human
human ingredients

one percent
calcium

some unexplained zinc deficiency from recent continuous heavy metals toxicity produced metallothionein

microbiota deficiency
sulfur procession inhibition
sulfur deficiency

some say ingested molecules such as sulfur need metabolic oxidation for days or weeks or even years and that explains why oxidants such as chlorine dioxide help body

most gene diseases not gene diseases such as mao deficiency because mao not absence completely but deficient and that from malnutrition and toxins such as poisons and heavy metals and infections impaired mao factors and as mao deficiency seen in autism and cured with chlorine dioxide and that establish toxins show gene diseases not different in almost every thing or that autism mao deficiency from infections continuous stimulation how

will be activated and prior answer better and god know best

lithium effects
potential effects
adenylate cyclase stimulation
camp elevation
protein kinase activation
mao activation
vasodilation

why they say take taibat diet and avoid sophisticated foods or processitives foods such as chickens and carbohydrates and especially powders such as starches and soluble sugar in liquids and spices such as onion and msg and processed foods and acids and that answer are because they deplete neutralizers molecules and increase blood sugar then both will lead to more excitation and that name agitation or high blood pressure and all excitations states are accompanied with forgetfulness always and that common advice was for most people because they had excitatory diseases usually and why some doctors said take nutella rather than honey

or sugar or carbohydrates because that is contain lecithin from neutralizers molecules and god know best

hyperthermics are circulation boosters and fluids secretion boosters and that like niacin because elevated temperature from increased circulation inspire repeated fluids secretion

when body excited or unable to process some nutrients will not hydrolyze them and that prevent absorption and that is like when sucrose given will not cause overstimulation but if sucrose given hydrolyzed in glucose and fructose forms will cause overstimulation in some patients because that forced absorption externally hydrolyzed and that inspire hydrolysis or absorption or bioavailability diseases are from excitation toxicity from excitatory diseases and that inspire excitatory diseases people such as high blood pressure or adhd have absorption diseases

some immune system inhibitors are excitatory molecule like glucocorticoids such as cortisol or others because

immune system activation need inhibition and for more oneself give inhibition with sleep for doctor and inhibition for body with cure excitatory diseases with excitatory neurotransmitters toxicity and excitatory minerals toxicity and give inhibitory molecules and sleep to heal then give inhibition for doctor and body other than that no cure and that means immune system suppressants cause tumor from excitation toxicity and that inspire cancer are from excitation diseases those will cause random growth and immune system inhibition or in some words inhibition factors deficiency from excitatory diseases that include but unlimited to high blood pressure and excitatory infections and excitatory molecules toxicity such as excitatory neurotransmitters toxicity or excitatory minerals toxicity such as hypercalacemia or heavy metals toxicity or excitatory toxins toxicity and sleep deficiency and inhibitory molecules deficiency

excitatory molecules such as stimulants or mao inhibitors or dopamine agonists or dopa in parkinson disease and others will increase forgetfulness because excitation

toxicity block memory and that is not suitable

niacin for glaucoma hypotensive and fluids secretion factor

hyperthermia from niacin overdose is inability for sweat and heat stays retained and that is from sweat secretion factors and classified too gut molecules and malnutrition molecules such as protein or choline or phospholipids or acetylcholine or cholesterol or estrogen or sulfur or magnesium or can be from neurotransmitters blockers such as anticholinergics or antihistamines or antidopaminergics or antiserotonergics or from excitation toxicity from excitatory diseases that cause inhibition deficiency with inhibitory molecules deficiency as inhibition with inhibitory molecules like aforesaid molecules they were classified inhibitory molecules too and melatonin cause sweat and in addition to why sweat secretion factors because when niacin given multiple times depleted them in sweat flushes and in that time will not be exists for support prepared hyperthermia sweat induction then heat retained and cured with vitamin c instantly or cold waters or without

any thing take from half hour to few hours and not bad that hyperthermia because have tolerable limits and not worsen and peripheral and not affect head or brain and lesser than fever and fever more and biggest badness from fever rarely head temperature that in ascension sensible and distressful to human and that is named brain fever otherwise free heat given without heater utilization bill and that energy efficient heat beneficial in winter season and work heater substitute and beaware from hypotension and that with hypertensive agents such as salt or msg and stimulants like green tea or vasoconstrictives like exercise or jump or cold water bath or epipen

effects from edta or most selenoproteins must be called same ptms like methylation and that example is edtation specially and chelation generally and for selenoproteins sulfurylation and thiols because not different than thiols and primary active molecule in thiols are sulfur and other molecules not count then should partially ignore selenium that in selenoproteins and not see them other than thiols and avoid excessive name separation then selenoproteins

also called as sulfur selenium containing molecules such as selenomethionine and selenocysteine and others be called sulfurylants or less preferred sulfuroselenylants and thiols and their effect is called sulfurylation and from ptms sub neutralization or chelation as depend for detoxification same methionine and cysteine and others no different additionally selenoproteins deficiency depend on thiols because they are bases and sign from thiols deficiency such as cysteine and glutathione and others or selenium

most glutathione peroxidases named peroxidase because there was no names and sticked to one better than nothing and seen in natural condition and they neutralize almost any toxins not just peroxide or any foreign molecule

excitation factors

some major controllers
oxygen

excitation toxicity block

ionic channels blockers

neurotransmitters blockers

neurotransmitters breakdown stimulants
mao activators

adrenergic neuron blockers
adrenergic receptor blockers

from first to last

what first release rely on latter such as sodium channels open with neurotransmitters

most aromatic molecules cross brain blood barrier and

cells end and for brain and tumor and cells regeneration and aging and from them sulfur and choline and some not appear aromatic except after oxidation or hydrolysis

some think zinc overdose excitatory in severe nutrients procession factors deficiency and inhibitory in healthy people

what molecules have lowest toxicity for detoxification such as oxygen and sulfur

coagulation factors for immune system as during infections immune system activated multiple times and cause clots as excitatory diseases such as diabetes have immune system deficiency and coagulation deficiency or that nonselective infections stimulated coagulation factors

chlorine dioxide effects
oxidant effects

overstimulation antidote
weak excitation
immune system stimulation
fluids secretion

someone take chlorine dioxide and reversed previous stimulation and have mild stimulation and that inspire oxidants detoxify toxins and weak excitatory and that chlorine dioxide similar to prooxidants molecules like iron and selenium and molybdenum and nitrate and some from them known excitatory but deficiency dependent inhibitory and their balance essential to prevent overstimulation as selective excitatory molecules deficiency like dopamine blocked with antipsychotics cause worse excitation after ingest lipids and that inspire some excitatory molecules deficiency dependent inhibitory molecules and not bad but to prevent what more worse and take nutrients in natural dose not cause overstimulation like for weeks to correct deficiency better than ignore

compulsory collapse effect is from excitatory diseases

such as most psychological diseases like obsession or psychosis both from forgetfulness often from excitatory diseases like hypertension or infections or that is compulsory collapse disease sub from obsession from forgetfulness simply is when human be mad suddenly and that called madness episodes from repetitive forgetfulness feel uncollected every thing good and responsibilities and protections appear leak riskily and rare from not keep astution or flexibility that appear protection thing between deep inhibition during tranquility and excitation switch and excited with activities suddenly and had that and left astution and flexibility from not follow rules and most common are sudden decisions and actions and anger towards god and not pleased about god to give them whatever they want and cured with please about god adherence for god speech by my glory and majesty if yourself not pleased i will bring worldy life on you and thereafter you run in that beast run in wilderness and inspire positive thing that one not know and entertain themselves and not intend oppress one ever but god wanted be one from among them to their sensors so become serious and stay with one strong whom heal

everything and be biggest worry and if god were not serious some will not respect god and did things for purpose but most merciful and we do not know and repeated guide whom want and mislead whom want reminder and whoever avoid my remembrance then unquestionably for them bad life verse in quran and everything will return again more good astution and flexibility and follow rules all with please about god

if urgent do not read do you want coffee what is your name peter tomorrow better

moreover for rare times in addition special factors for ignorants or unwises or untranquils or irreligious are comprehensive term such as inabilities or prison or oppression and opposite to knowledged who know protections and every thing from creation to enter paradises on god and every thing are predestined indistinguishable from movie that life and we actors throughout scenario and in that end may god reward people paradise in afterlife then this life forget about it hyperrealistic but uncontrollable except what god want same we are under macro and we

will act free in afterlife and believe that or do not believe and if believe less bad than not believe and i tell you surprise say yes okay that what islam based entirely and proven this life movie and promise for free paradise in afterlife that is good sound indeed god grant in grantness who do not scared from poverty and that revealed special science name qadar verified parts from human manual and that in previous christianity and judaism and used as potent tranquility inducer anytime after get knowledge and cure for that disease instantly are islam if they able or judaism and please about god and take actions to have what want everything predestined and maybe this sign and learn special sciences and cure excitatory diseases if exists together are cure way for all the people because that happen naturally in many people but more in patients

excitatory diseases
neutralizers diseases
examples
diabetes

↓

excitation
high blood pressure
high blood sugar

↓

cells damage
examples
blindness

and

cells repair factors disability
immune system inhibition
fluids secretion inhibition
coagulation factors inhibition

↓

cells damage unrepairability
examples
organs damage
chronic blindness

diabetic ulcers
kidney damage

↓

most humans will stay blind and injured for their age and die on that because they did not cured diabetes simply

if cured injuries from inside blindness and kidney damage will be cured

sulfur bind with unusual minerals but not alkali metals and alkaline earth minerals and nitrates and silicates and that inspire most unique friendly chelator for human that will chelate most toxins and all minerals except sodium and others and god know best

some diseased people when take excessive sugars alone without nutrients such as gut molecules like lipids or protein or vitamins or minerals will be dangerous appear excitatory as elevate pressure and if with them will be inhibitory or neutrally or energy and that according to god

rule not permit for one rely on one thing ever what ever lie to themselves seamlessly and god command effective moreover even that enter human in mini mind mode opposition to things diversity goodness as we want difference all times in every hour or spiritually dead additionally that was psychological athleticism and scientism inducer that enlarge mind via self control throughout rules and routines follow and that good tranquilize humans and live better life wiser and aqil thereinafter until enter paradise and that god mercy

some neurotransmitters work locally such as exogenous serotonin and can be used for anxiety but neutralized in stomach acid or metabolized or used coated capsules or topical

what used for battery such as hydrochloric acid or its products such as gut vitamins and sulfur and carbon and lithium for human energy and memory

human digestion also known as hydrolysis need fluids in gut and that happen with most fluids secretion factors to stay moisturized such as some fluids drawers or osmotics like magnesium and without enough fluids in gut lot nutrients not digested and if not digested will not be absorbed and as sucrose digestion need water and sucrase enzymes to produce glucose and fructose and without enough fluids and hydrolytics and transporters except absorption and bioavailability and effects whatever they eat same sand

sugars need hydrolysis to have glucose and fructose and in gut hydrolysis always demand fluid for sucrase enzyme and happen with energy like boil with acid or radiation and that radiation used in tumor and that means hydrolysis factors deficiency from enzymes deficiency and fluids secretion factors and both may cause acidic hydrogen toxicity as waited but dry no fluid and enzymes as water and acid hydrolyze and accelerated with catalysts or stills wait reproduced or hydrogen factors or protons factors or protons transporters or ways blockage from stones or

plaques

sugars memory effects factors lipids as someone take pastry with boiled sugar and butter have liquid lipids and cholesterol and with protein and seems improved memory or that just alone from the exogenous digestion also known as hydrolysis in that heat same human gut digestion always and brought glucose and fructose and they use microwave to quick digest acetaminophen in lab for effectiveness test without active ingredients damage and that inspire boost most nutrients bioavailability with heat predigestion and produce glucose and some glucose products by oxidize with heat such as boil or microwave or sun or oxidants

nitric oxide important for body and factor for proteins and without that continuously production in every moment will ruin every thing and almost all diseases are excitatory and essentially accompanied with forgetfulness always so nitric oxide will lower pressure and that relax muscles and restore memory easily and were pressure lowerers best cures ever as seen in all diseases commonly

from god rules that in most times will not permit for you rely on one thing that for your matters ever as will not entertain and that seen in health no single nutrient suffice whatever was and forced take leafs for optimal health and that seen in energy no generator suffice but extract fuels from earth and that enlarge their minds and that god rule inspire must utilize every thing in this life nothing shall disabled ever and did doctors meet that rule or still gives protein and vitamin c or synthetic chemical drug for fifty years to reverse disease Goodluck
9:28 pm june 1 2026
rule

magnesium same sulfate

hyponatremia and hypocalacemia both accompany each other typically always and then both same thing and that inspire when magnesium induce hypocalacemia are have inverse relationship with calcium and sodium too and act

calcium channel blocker and sodium channel blocker too and that inspire hypocalacemia can be reversed too with hyponatremia cure or hyponatremia can be reversed too with hypocalacemia cure and that inspire magnesium for hypernatremia and hypercalacemia and hypokalemia so that hypokalemia with hypercalacemia or hypernatremia cures and such were gut molecules such as alkalines like magnesium or zinc or vitamin k or plp or lipids or protein acts diuretic for sodium retention or others and may god bless you

magnesium have inverse relationship with calcium and able induce hypocalacemia and also antagonize calcium effects because calcium channel blocker and that disable calcium effects and seen in hypermagnesemia weakness because calcium are excitatory molecule in always times and used for muscles contraction indispensably so unquestionably without unintentional false knowledge disaster and may allah guide all

hyperphosphatemia cause hypocalacemia in blood but still

deposit in organs then that just competitive in blood and in replenishment will cause deficiency again and complicates calcium deposits

cows pretreatment
anesthetic gases spray
anesthetics injection
anesthetics water
weapons

why does choline smell same sulfur because hydroxyl same sulfur and will encounter same receptors and known same

sulfur and sulfur similarities such as hydroxyl containing molecules or methyl containing molecules or general ptms containing molecules alone such as methyl containing molecules or acetyl containing molecules act as cells penetratation enhancers and nutrients transporters and mixers or emulsifiers or anticaking such as dmso and choline and used for circulation and that increase nutrients

delivery because nutrients transportation factors such as phospholipids contain choline act as binder or emulsifier or solvents that mix water with lipids and that show phospholipids as universal nutrients transporters suitable for human and others inositol used for microbial lipids synthesis and potentially serine and ethanolamine and as estrogen and cholesterol from lipids and contain hydroxyl group for nutrients transportation

someone take folic acid 334% dv and pyridoxal phosphate 2353% dv and niacin 3125% dv and selenium 364% dv and vitamin e 1227% dv and selenium 91% dv and biotin 3333% dv and thiamine 8333% dv and cyanocobalamin 20833% dv and oil and salt and honey before sleep and after that wake early easily and have increased circulation shown red arms and with hyperthermia and that increased circulation from blood thinners such as vitamin e and selenium toxicity and missed coagulants and missed glutamate blockers such as magnesium or zinc or carbonate or bicarbonate or protein deficiency for utilize them to produce inhibitory molecules and detoxify old holded waste such as protein and sodium

and water seen in water retention as the rule when protein not found in any where will fail and whatever predeposited nutrients will be ignored and excreted seamlessly and that glutamate blockers deficiency caused excitatory diseases cause coagulation factors deficiency and act blood thinner or increased blood cells production as for anemia and that hyperthermia cured with vitamin c instantly and everything from niacin overdose without need and that is inspire they are for wake early and circulation such as for hypothermia or some solid tumors or some liquid cancers and as some from vessels blockage and for blood cells production and god know best

human take folic acid 334% dv and pyridoxal phosphate 2353% dv and niacin 3125% dv and selenium 364% dv and vitamin e 1227% dv and selenium 91% dv and biotin 3333% dv and thiamine 8333% dv and cyanocobalamin 20833% dv and oil and salt and honey separates before sleep and after that had hyperthermia likely are from acute niacin overdose or missed other gut molecules like vitamin k and not prevent blood thinners like vitamin e and selenium toxicity

increased circulation and that cause hyperthermia or magnesium and zinc and carbonate and bicarbonate then most not prevent glutamate and that cause glutamate toxicity hyperthermia also known as fever and cured with vitamin c immediately and other antifever or antiinflammatory or hypothermics are carbon dioxide from bicarbonate with acid reaction seen in soultion and bicarbonate produced from zinc

asia soil

magnesium
sulfur
selenium
lithium
cobalt

america soil

counted minerals

iron table renew

oxidants
selenium

gout from excess fluids secretion factors such as molybdenum stimulate uric acid and in excess deplete copper and dry mouth inducers and retinoids help

gut microbiota
gut microbiota products
b vitamins
amino acids
serine
methionine
fatty acids

antibiotics impair s adenosylmethionine

most alcohol group or hydroxyl containing molecules or ethyl containing molecules or methyl containing molecules are psychoactive and methylation is inspire m ethylation for

psychoactivate nutrients or deactivate sometimes and the other ptms molecules similar

belly nutrients depletion broad spectrum excitatory diseases is abbreviated bndbsed from digestive tract molecules deficiency such as magnesium and cobalamin and zinc and vitamin k forms and folates and others found in gut and cause excitatory diseases such as diabetes and agitation and psychosis and high blood pressure and adhd and muscles overexcitation and insomnia and some tumors and defecate difficulty and always the excitatory diseases accompanied with the forgetfulness and allah knows best

eat sugars excessively or chew khat draw fluids and deplete gut molecules such as magnesium and cobalamin and zinc and important gut microbiota and mouth microbiota for those vitamins production and nitrates procession and that depletion cause excitatory diseases such as diabetes and psychosis and agitation and insomnia and accompanied with forgetfulness and chronic constipation

someone take ice cream and the nutrients seems more bioavailable like from inflammation inhibit increase absorption and that means antiinflammatories for absorption or from local stimulation also hot drink

excitatory diseases such as some tumors from inhibitory molecules and they are bone calcium mineralization factors deficiency such as gut molecules such as magnesium and vitamin k and cobalamin and sulfate and liver molecules such as vitamin a deficiency all cause hypercalacemia because release calcium from bones and keep blood calcium not mineralized bone and that force body to distribute calcium in organs cells usually stores and converted stones and over time appear tumor

noradrenaline stimulate melatonin synthesis to keep excitation balance during awake without high blood pressure or accumulate until night and released to counteract noradrenaline like they are in cycle and noradrenaline produce its blocker and as melatonin

catecholamines derivative and catecholamines and catecholamines derivatives often bind with each other receptors as melatonin bind with dopamine to block that and similar glutamate produced derivatives such as theanine to block that overexcitation and that means molecules derivatives such as theanine and gaba and melatonin and molecules such as noradrenaline stimulated substances synthesis such as melatonin act as its blockers

transient excitation after cyanocobalamin from sam e low and produced more in sleep for methylation or cyanide detox or damages repair need sleep or cobalamin bind to rna need inhibition like sleep and stayed circulate in blood and there is no problem just sleep like what you do every day

cholecalciferol toxicity and high blood calcium and related such as most hydroxyl containing molecules like adrenaline toxicity from inhibitory gut molecules deficiency such as magnesium and cobalamin and vitamin k2 and neutralized with oxidants such as chlorine dioxide or hydrogen peroxide

and that may be more neutralize hydroxyl groups

testosterone excitatory as nonselective stimulant grow hairs in men and estrogen inhibitory as freeze organ solidification in womens as still in born state soft and that inspire deplete excitatory molecules and increase inhibitory molecules will prevent premature aging

not written something and felt lost and i did not believe that satans inspirations ever so but expressions and i said today 7:13 pm may 19 2026
rule

from the wisdom of god not caused me to write that from before weeks because want more to write one time without more tiredness so every scheduled work in your mind have predestined time will be in most goodness so do not worry about your pending goals everything will come and in the paradise more collected of all of your affairs imagine even the pictures so case closed all ways lead to rome

gut molecules primary factors for memory as someone take cobalamin and magnesium and glycine and taurine and glycans precursors from glucose and bicarbonate most them have same lecithin effects for memory and that wonder thing lessen choline need

gut molecules such as cobalamin and magnesium have inverse relationship with cholecalciferol and related such as calcium and as someone take cholecalciferol and have high blood pressure after that and after take cyanocobalamin and sleep calmed that hypervitaminosis d and vitamin d for hypervitaminosis b12 toxicity

that means high blood calcium or heavy metals overstay such as similar calcium such as lead from gut molecules deficiency and about low blood calcium from excess gut molecules such as in kidney disease who have that low levels

analgesics with delivery enhancer vehicle such as dmso spray for injections substitute such as in dentistry

after someone take cholecalciferol 600% softgel chew have high blood pressure more and may cholecalciferol have inverse relationship with estrogen and other steroids or complicate early pantothenic acid 10000% one dose or vitamin a

someone take cholecalciferol and have high blood pressure and calmed with the gut molecules such as magnesium and cobalamin and vitamin k and lipids and zinc and pyridoxal phosphate and they are factors for cholecalciferol and cholesterol and other steroids and most vitamins and minerals

do not go to search if you are lost except prepared because will have overload

for induce excitatory diseases those accompanied with the forgetfulness such as agitation or adhd and anger and able to induce paralysis and dissociation and disability easily so programmed and inspired and algorithmized exclusively for hereinbefore fun hhh so you may unexist exactly then save earth from you and thank you.

results

some knowledged people who intoxicated will be disabled temporarily and return and sometimes if keep overuse will not resist that transient disability want choice return or be agitated and will be agitated in the future and that lead to randomilty

not about me
usually most people will be agitated and when agitated they forget same the anger moments and they will opposite

most the matters and they will not obey the rules and that lead to randomilty seen more over future and from that randomized live they will be controversial same the agitated animals like convert most people to animals and so the village be forest like and will that consume government resources how many controversial humans and some from them as without mind they will feelless about their country front them and maybe work against their country especially if previous people are found have excitatory diseases before time and that similar to yemen after khat poisons

the united states of america people most western excited people and they do protests and the god knows best

READ INSTRUCTIONS BEFORE THE FIRST USE
MSDMANUALS PROFESSIONAL EDITION (2017 - 2023) see Stimulants treatments and in case of emergency call 911.

from wisdom of allah in belly fluids such as digestive tract molecules like magnesium and cobalamin and glycine and taurine and all others were default inhibitory molecules to prevent excitation after any food and any or all were used for most food or drugs excitation toxicity such as caffeine toxicity and glutamate toxicity and herbal spices agitation and local chelators such as edta toxicity and most food or drugs high blood pressure and restless legs and seizures

someone have high blood pressure and taken magnesium relaxed their muscles but not high blood pressure and eat monosodium glutamate food and have muscles excitation and high blood pressure back more follow some inhibition and both appear always as agitation disruptive and that is from the preexist high blood pressure not from glutamate alone and maybe their pancreas not secreted magnesium replenishment or that magnesium oxide were not suitable for those excitatory diseases such as muscles excitation from beginning even if shown muscles relaxation may be not the correct permanent thing and the root treat both together

agitation or muscles hyperexcitability and salt or common muscles contraction molecules such as acetylcholine and glutamate sensitivity complicated by high blood pressure because there is different between muscle excitation and blood pressure and when someone not had preexist high pressure their muscles will be contracted more after take glutamate and will increase blood pressure somewhat as what in healthy people who take msg food they not have sensible agitation feel and the agitation from two the first

the muscles become excited more and increase pressure somewhat and the high blood pressure that preexist both will appear as disruptive agitation and even the high blood pressure alone and that show organ shakiness such as eye twitches and head vibrations and the muscle overexcitation alone will appear as electricized muscles contracted frozen without agitation and that means most movement diseases those compulsory without voluntary motion and during the relaxation such as akathisia or restless legs syndrome and organs shakiness and some seizures from the high blood pressure and about the other movement diseases those with voluntary action such as reflexes disease and most organs stand tremors such as finger tremors such as in parkinson disease or alzheimer disease seen and some seizures from the muscles overexcitation in most times movement diseases from the high blood pressure and muscles overexcitation together

inhibitory diseases such as fatigue and respiratory depress and ed and allergy and heart failure and valve overrelaxtion or valves regurgitation and vessels overdilation and muscle

overrelaxtion and disability reversed with excitatory things such as the excitatory diseases such as some malnutrition and infections and cold shower and exercise and salts and alkalines such as the lipids and carbonate and magnesium those are often found in gut their neutralizers or depleters such as toxins or unfriendly molecules such as acids such as chelators such as edta and hydrolytic gases or oxidant gases such as carbonated water and chlorine dioxide but most acids less used for some heart diseases as ascorbic acid administrated for multiple times in someone not have overrelaxtion diseases then had accepted excitation ratio relaxation and have heart pain during that in continue and the most laxatives such as the previous chelators such as acids such as edta or polyethylene glycol and drugs such as antibiotics and spices and most infections all those are contaminate digestive tract fluids and that depleted them and appear as diarrhea sometimes and were positive sign they have healthy digestive tract fluids with pancreas and liver so if one want laxatives just take contaminant such as polyethylene glycol and that were example about that and in continue and the excitatory molecules such as the salts or glutamate or inhibitory molecules blockers or depleters

such as alkalines depleters such as stimulants or chlorine dioxide because when chlorine dioxide used depleted the inhibitory molecules such as the mentioned gut molecules such as magnesium and others and detoxified most toxins and reversed inhibitory diseases such as fatigue and heart failure and valve overrelaxtion as contraction concentrated and some excitatory molecules such as the blood pressure elevators such as salts or glutamate not suitable or perfect or steady choice for most inhibitory diseases such as heart failure except in some emergency conditions and thank you

the gut molecules precursors such as bile acids are the gut molecules the dietary ones for example gut molecules such as magnesium and lipids and cobalamin to create the basic bile acids as bile acids are in recyclation because bile acids extremely necessary for liver and they are reabsorbed and saturated by the liver with steroids and the ask for the liver to stay healthy and help gut molecules stay take the basic dietary gut molecules such as magnesium and their store such as the pancreas secrete healthy

someone take magnesium and inhibited and after eat food some excitation returned and that say they replenish their gut molecules exogenously not endogenously as pancreas who secrete blocked or magnesium factors like magnesium transporters blocked and that is why they need to take the gut molecules like magnesium and cobalamin and vitamin k externally always and they have pancreas episodes before years or if stay take will heal

digestive tract appear the significant excitatory molecules release sites because when dry cause excitatory diseases such as agitation and liver disease and hyperreflexia after oral chelators or laxatives or acids or drugs like antibiotics or spices and when wet such as by magnesium or lipids or glycine or taurine all those were glutamate blockers cause tranquility and when feared the digestive tract cause fluid discharge and largest serotonin amounts found in adrenal and what what will cause the body excite if their digestive tract sealed as the brain are respectful

someone take

mild excitatory
pantothenic acid
vitamin a

mild inhibitory
calcium carbonate

excitatory
chlorine dioxide
glutamate
cholecalciferol

mild inhibitory
cyanocobalamin
olive oil
glycine
pyridoxal phosphate
glutamate blockers
magnesium
after that nostalgia and tranquility his mind returned like for first time since dozen years
erectile dysfunction

magnesium secreted in stomach and allergy people release excess and that is depressant and inhibitory molecules like gut molecules such as magnesium depletion with chelators or chlorine dioxide work

someone take magnesium relaxed body muscles but not blood pressure effectively and that inspire there is different between body muscles excitation and high blood pressure

calcium carbonate similar to magnesium and they are same and original companions except dissociated industrially

the magnesium sulfate are the halal wine of the poverty people

magnesium same lithium depressant

someone take magnesium and their mind returned like for

first time since ten years and that from the gut molecules and selective excitatory neurotransmitters blockers like glutamate blockers

excitatory neurotransmitters block memory and cause forgetfulness by distribute muscle contraction factors toward whole body muscles and that cause low brain memory power because memory retrieve need them appeared when the human contract the mind thanks

philosophy
philosophy factors
phosphate
oso group donors
philosophy intoxicatants
everything plato says is false
what socrates says is true

sunshine work similar to steroids

why does some people not want tie thing in their minds because untie thoughts from their sectors like will lighten used space and their sectors like will release their stored nutrients or at least their use molecules will leave and that relax the human may the body supply nutrients equally to all sectors like for their use purpose and that is why does the people who finished untie their rules or wisdom from roots permanently intentionally may be satiated because the nutrients molecules will not be busy with any ongoing used sectors like and be used in entertain areas and that were stupid thing back to child exactly but usually that is not happen by any healthy human ever but by who have excitatory diseases such as agitation or blood pressure stealthily so all the matter is relieve from torture to their knowledge and that were philosophy

joints pain follow forgetfulness from amino acids synthesis deficiency

als from glutmate factors deficiency

sometimes unfirm laugh is thoughts clotter

dehydrogenases doing deprotonation and their precursors

alkalines

hypercalacemia from steroids deficiency as treated with corticosteroids

hydrolytic enzymes like sugar that go fermentation release carbon dioxide and that means enzymes precursors sugar products such as amino acids like glucogenic amino acids and for the reaction carbon containing molecules such as carbonate or bicarbonate and carboxylic acids such as citric acid or pyruvic acid and general protein synthesis factors like ptms molecules like methylation like sam e

the molecules or amino acids not found in plants or animals but in human for the human brain and body processes like nutrients handle such as methylation from methionine like sam e or glutathione to neutralize and bind some toxins and that inspire methylation used to neutralize toxins

loading effect is when the human hitted with thing right and look stupored and weak and frozen and the heart pulse fast from the excessive excitatory neurotransmitters release and that is not except for the preparation to be in the solid state and that process is called solidification and need stress and silent and pain and anything shall be stupid will interrupt the process so be yourself do not please the people at this time and for the people around do not call the human stupid it is before hit and see yourself

the glucose never sold in the united states of america but in lesser forms like dextrose and that inspire the benefits from the glucose except for the dead people who already sickers that even may the coffee damage them so not for all people but there is still difference and the diseased never counted

they give someone in the hospital poison that in saline solution and they pushed not slow like nanoparticles and accumulated in brain blood barrier and they blocked that to not deliver the nutrients to the brain and the brain be unhealthy show diseases

self filling disease is when the human create disabilities from nothing except were stimulants or relaxants goodbye

the human biological system extremely strong manufacture stone

after pantothenic acid 10000% daily value single time and next day vitamin a 333% single time the forgetfulness and excitation increased and ensure milk shake or lecithin not work for the memory after them and that inspire vitamins toxicity cause major types of diseases even schizophrenia and that toxicity from liver disease in the most times like not produced glutathione and similar to acetaminophen toxicity

why does the microwave powerful in the morning because the people sleep not use the internet like in night they said

high ldl cholesterol from choline deficiency from estrogen deficiency and estrogen restore choline balance

overstimulation activities like music and porn and verbal offend and other sins electron acceptor and the mind electron donor if the human want

so that is why the human feel lighter after that

inhibitory activities like quran or pray or khushu or similar meditation or sleep and alike electron donor and the heart electron acceptor if the human not resisted

so that is why the human feel heavier that appeared truly satiated after listen quran or others

that is why when the heart oversatiated from inhibitory activities like worship allah and other righteous deeds may do overstimulation activities like excitatory activities like listen music or sins or exercise or expression to lessen the load

that is why the hungry human do inhibitory activities like

quran and khushu and pray

the proof is the body created from the soil so its food from the earth and the soul created from the heaven so its food from the heaven

even during the sleep the soul go to the heaven and the worshipers appear heavy and that inspire all soul food is from the heaven

the god not left the neurotransmitters not brokendown like acetylcholine and make the human in idle conditions some times because they are may be like the hard disk arm that overwrite so that cause unwanted upgrade to recent poor condition in the memory and excessively leave older good knowledges that like just born again every day and in most times the human will be fast and that is not good they just live healthy their brain work in best performance and may be some times very good for some people as life is known

not every methyl donor is universal methyl donor but every

one selective and for example b12 almost for dna because that reach places not reached by unspecialized molecules and folate similar but sam e is the most specialized methyl donor

hypercalacemia from inhibition conditions like stay and khushu as they said calcium is cns depressant or bone mineralization factors like liver molecules like vitamin a and vitamin d or sunshine

they give vitamins exceed recommended daily amount and their deficiency cause agitation and when given balanced inhibit body and when given overdose cause agitation as paradoxical effect then in the deficiency and the toxicity too there is agitation and for example most supplements contain pantothenic acid exceed 10000% daily value and vitamin a exceed 333% daily value that is may be like stay three days not sleep as someone taken pantothenic acid and have agitation and next day taken vitamin a and have more agitation and brain fog most likely from paradoxical effect

inhibitory conditions like depression have inverse relationship with exercise activities like walk and dance and that sign from power overload not extracted but the human not know so may be feel nausea

the westerns were keen for support the human memory and the god were keen for predestine the forgetfulness for most people and they do not know the forgetfulness is mercy and that were evidence some from them are strayers and do the human tranquilize more except from the newer condition as born new and during the intoxication from alcohol to forget and even some their wish only stay intoxicated they do not want feel themselves alive so they take alcohol continually and when the memory stored lot things like the machines and that is not suitable for the human but were overload disrupt the human from the natural live and the humans does not know where the goodness for them some will benefit from the memory and some not and some will benefit from the forgetfulness and some not but god already predestined exclusively unchangeably what benefits

every human those things in god hands and forgetfulness were my cure predestined repeatedly in condition during they want kill me and i did not fear any more from any thing together with my islam religion and even sins residuals and every time i feel my self born new and you believe in the predestination its goodness and its badness and every thing is good for the human until enter the paradise so good everything is guaranteed all ways to rome and either are not make sense because the essential deeds not need strong memory may god give you paradise

muscles spasm treated with inhibitory molecules like muscles relaxants without flexion exercise and known الشد العضلي

they say forever plastics and cadmium and graphene oxide not detoxified ever for weaken the human so he shut down and that confuse him when he sick will blame that frivolous toxins and not know that from something else and note the other place they say cadmium detoxified with edta without conceal in that secret like spot so they do not mention in all

places just like secret and even the human body when stop truly from take the poisons would heal naturally in the most times and about the poisons in the most fast foods with the cold packages and famous brands all already poisoned see the forgetfulness and the agitation after them to notice and the most drugs same thing and that were the usual thing to the general people and the special manufacture are for the targeted individuals they put the poisons in every delivered food even if the food were from walmart or the near stores and the packages appear in its original famousest look and in the hospitals all the medicine given with delayed poisons as i am seen that in the ultimate reailty and see where does the united states of america government tricks that is were their work secretly and if you do not see it right here where do you will see in the movies like and if you do not believe in the intelligence agencies then you do not believe in allah too and that were the biggest mistake not the first one so if you will believe in the god and become muslim the god will guide you in every thing in this life and the afterlife and let you see the unseen knowledge that help you and save you from any thing and do you know why the united states of america not want the islam because that defend the human

from all the levels from the mind and the earth incidents to the afterlife surely it is will be i am scientist from before five years and the god saved me from the united states of america traps for kill me more than ten times and identified the unknown by the god light i am not from the church this is serious it is called firasah and stopped go the hospitals after the fourty time visits in three months and they were kidding and i learn the medicine best than the most doctors in the earth in less than two years follow the rule every thing depend on needs and the tumor treatment summarized is in systematically or intratumorly given oxidants like radiation or chlorine dioxide or acids or mild poisons like chemotherapy some from yew plant derived and poisonous plants like amygdalin and most alkaloids and antiparasitics and similar plants and parasites detoxifiers like oxidants or drugs like fenbendazole as tumor cells empty and weaker than healthy cells and affected like parasites and of course the human need mild poisons in the most times as the tumor cells are more dangerous than the poisons because they are half damaged and not damaged fully for detection and they did not choose not come at all so they be in between not damaged fully and did not stay away and like

the fluids secretion factors like acetylcholine modulators like nicotine or lecithin or fenbendazole and the inhibition factors like sleep and pns activation factors both like treat the excitatory diseases like high blood pressure and insomnia and anxiety and heavy metals toxicity and menopause and some malnutrition like liver molecules like vitamins and lipids deficiency like with fish oil and like give the inhibitory molecules like excitatory neurotransmitters blockers like beta blockers or glutamate blockers or calcium channels blockers and gaba agonists or serotonin agonists and like the local deposited heavy metals detoxify with edta and permeability enhancers like dmso in addition to topical and the infections treatment summarized are oxidants like chlorine dioxide or hypochlorous acid or both and the clots with the stroke and the animal bites treatment summarized is in intravenously or orally or topically or intraorganly given the solvents like dmso or the oxidants like chlorine dioxide or hypochlorous acid or bicarbonate or combined chlorine dioxide with dmso and in this earth far away from that the people not know in every time the human will be pleased about their owned diseases what ever they are gradually with treatment or without that and

will not want this life any more and want the death any way and every thing is good and they will enter the afterlife paradise instantly after that in the most times and that were what the god want first take the fear from the death before months and want the human hate this life and not fear from the death and want the death so you see every one pleased and very lucid before the death and i am first one from long before the most important thing i reached to the best thing that support me handle every thing powerfully and not fear from the death and that were the best condition in the life believe me that were just hint and i am not that and the god bigger he say be muslim and you will be safe
10:44 pm may 7 2026

the lipids affect the unhealthy human are the solid lipids like the saturated fats like in the milk butter and the cholesterol alone or with similar solid lipids like the saturated fats in milk butter but not in fish oil or the food like egg and the transfats and the liquid lipids like the olive oil almost in all times beneficial for all people even if they have obesity or heart disease or diabetes but lower glucose so be aware

wide stool is sign from the muscles contraction molecules deficiency like acetylcholine and oxytocin and serotonin as when someone ejaculate the anus muscle contract from the muscles contraction molecules release and when someone take lecithin after that the stool is thinned and soften like also supported the fluids secretion factors molecules

most supplements like lecithin improve memory like by help produce vasodilators like nitric oxide and those counteract noradrenaline and increase blood flow so increase oxygen and nutrients like glucose delivery for astrocytes as when the human not breath his memory shut down and collect oxygen to the brain by breath carefully improve memory and as almost all organisms live with just the oxygen and glucose and coenzymes seen in them and give amino acids like arginine for nitric oxide precursors like coenzyme a like from pantothenic acid synthesized and pyruvate factors like from take sugar or glucose or dietary for acetylation donor that aceytl coenzyme a synthesis and methylation donor like choline and proteins like methionine and sulfur for

cysteine synthesis for the antioxidant and neutralizer glutathione synthesis and for coenzyme a synthesis improve memory

someone take three capsules b vitamins each reach two hundred percent recommended daily value and biotin one thousand percent three times and that like lower sodium and block sodium channels and in next day drink ensure and have left hand fingers spasms like from b vitamins toxicity worsened with slow nutrients process and like coblamin toxicity induced peripheral neuropathy and discontinue b vitamins and stop intake ensure drink temporarily and take sodium or potassium help or take detoxifiers like oxidants like chlorine dioxide accelerate that process

someone had scratch on his penis front and healed recently but became thin skin circle that almost flat like nearby cells not uplifted outside like bubble and after take ensure drink that healed scratch blown outside like bubble sore upper than other cells like increased gases production like the

nitric oxide and improve the memory and that effect are accelerated by the exercise and that means the gases like nitric oxide blow the brain cells and lung cells and muscles to be filled like the balloon and for the brain atrophy and lung atrophy and muscles atrophy and that means most people have atrophy have erection dysfunction and most people have healthier erection not have atrophy and that means the erection have inverse relationship with atrophy and that nitric oxide improved the memory as during the sex the human mind remember more and as vasodilator increase blood flow that enhance oxygen and nutrients delivery to the brain

someone take b vitamins and elevated biotin with sugars and mimicked alcohol by induce forgetfulness and fatigue as b vitamins for metabolism like induce cyp450 and that accelerate molecules breakdown like lipids and sugars and enzymes and hormones and that means nutrients process molecules like b vitamins for nutrients overload diseases like obesity and high blood sugar and drugs toxicity like nsaids toxicity and alcohol intoxication and drugs half life

and mineral toxicity and excluded vitamin hypervitaminosis but not supplied among the other b vitamins and muscles contraction molecules like excitatory neurotransmitters like acetylcholine like by stimulate cholinesterases and mao and selective high blood pressure

the dimples induced by meat tenderizers like antipigments molecules and defiberation with antifibers molecules such as protein denatures and anticoagulants such as oxidants like chlorine dioxide and protein disassociators such as solvents like dmso and defation with saline solution and oxidants and solvents and increase permeability and decrease junction and hotting tumor activities and double sided press may be enough

someone were not eat sugar and think decrease memory and have liver disease and vitamins deficiency and minerals deficiency and that is the transient paradoxical effect and if kept take sugars will improve over time and more likely with vitamins and minerals and not knows he were overconsume resources by his wrong and overact and sophisticated think

way that binding every thing known to be brought front and that is overstimulation and called the mini mind as wanted that lite not be tranquil and relaxed and think fully and do single thing per moments and not act ever such as excite the mind by think or excite the body by move except on need as that save the energy and keep the memorized informations safe and more productive as that is known after inhibitory molecules also known as depressants and mood stabilizers such as the excitatory neurotransmitters blockers like beta blockers or glutamate blockers or sodium channels blockers or antipsychotics

the excitatory molecule be inhibitory when there is preexist deficiency as it reverse the absence substitution effect and also called deficiency dependent inhibitory molecule like the dopamine agonists in akathisia and restless legs syndrome that caused from elevated other excitatory molecules like adrenaline and glutamate and that suitable molecule the dopamine compete them and also the calcium most times known excitatory its deficiency cause tetany

some people perform music instruments not want perfect but extract their feelings by express and sometimes appear strange and unperfect but they not know the entertainment to the performers in that time and the performance of the music instruments is subtype of the expression therapies

hooks
attract attention deeds
exercise behind
backflips behind
walk
fix headdress
vagus nerve stimulation
delayed sing

pyridoxal lower seizures mostly by support dopamine production when the body substituted that excitatory molecule with more excitatory molecules such as glutamate and noradrenaline led to seizures and that is called absence substitution effect and somewhat with gaba

production as pyridoxal known excitatory but in this thing can be called restore deficiency balance so exert inhibitory or pyridoxal are excitatory dual inhibitory molecule and excitatory molecule in satiety and rare times and inhibitory in deficiency or inhibitory deficiency dependent and that apply on dopamine agonists in akathisia or restless legs syndrome

human strength and bravery depend on oxygen in the head simply and when defeated they breath deep and they back

hydrocarbons
lipids
waxes
solvents
volatile

dmso like

methanol caused blindness by toxic methylation and give liver molecules like ptms molecules like methylators like sam e and acetylators like acetyl coa and retinoids and

steroids like cholesterol both like from cod liver oil and neutralizers molecules like milk protein or sodium bicarbonate or fulvic acid and detoxifiers like glutathione like from nac or chlorine dioxide or hypochlorous acid or hydrogen peroxide and excitatory molecules like most b vitamins like coblamin or pyridoxal and nutrients like iron or coenzymes like biotin energy molecules like electron carriers like coq

contract belly muscles like in wrong sit position stimulate secretion of stomach acid

the exercise like throw things up and catch them or sex or vagus nerve stimulation like overspeak accelerate the process or metabolism or memory effects for supplements like ensure or lecithin

the laugh is عقل or experiences or knowledge retention explosion and that means when you see someone laugh multiple times he can not contain that thing yet and he

escape from that hidden scared and that sign from the weakness not strength and all the strong ones not laugh and all the weak ones laugh except rare times the strong ones laugh like the god and the prophets and the wisers and the rulers and the scientists and except most times they smile to the children and the elders and all people

people who take shower every day have smoother hair as the water stimulate keratinocytes and melanocytes and draw blood to skin cells and even those who married because they take showers more than before and also sweat more than before and as increased fluids secretion factors smooth hair and skin

the autism is from synthetic vitamin a given during pregnancy or birth and even inhibitory molecules like nsaids and gaba agonists elevate some inhibitory molecules like adenosine and retinoids and may be that retinoids deposited in place not reachable with food and vitmain a toxicity inhibit melanocytes and keratinocytes and bones formation and many processes and vitamin a depleters

such as oxidants like chlorine dioxide cure that and already they used that and worked

people with brighter skin have melanocytes and keratinocytes deficiency and vitamin a deficiency cause hyperkeratosis and that means they have vitamin a toxicity from synthetic vitamin a supplementation during pregnancy and birth even in normal level abnormally acts as overdose toxicity inhibit melanocytes and keratinocytes and bones formation and many processes and vitamin a depleters such as oxidants like chlorine dioxide and alcohol and followed after days or weeks with natural vitamin a supplement like cod liver oil and other sources and not expose to sunshine except after month from complete the supplementation will cure skin diseases such as skin cancer from energy sources like sunshine and radiation and that for vitamin a diseases both synthetic toxicity and deficiency and that means most people who drink alcohol not get skin cancer from sun but they said increased that then alcohol deplete liver molecules like retinoids and essential amino acids like nac and glutathione and lipids

like steroids like cholesterol and cholecalciferol and lecithin as alcohol have phospholipids marker and they not replenished vitamin a and that means they have vitamin a deficiency

when alkaline molecules like milk calcium carbonate solidify with acids that means they dissolve more with alkaline molecules like bicarbonate and that means cells need alkaline molecules to allow nutrients entry and diabetes acidic disease have insulin resistance

sometimes people who think more have coarse hair when they do specific head muscle contraction the oxygen used for that and the blood nutrients drawn to that place and not prioritized for hair cells and that is why the people inhibited by diseases and calamities and aging have more silky hair

some milk shakes such as ensure are inhibitory and halal alcohol and xanax and other depressants substitute and that is why when someone drink many bottles be drowsy

most people have forgetfulness have skin diseases from liver disease

what dissolve cement stone or egg shell dissolve kidney stones and gallbladder stones

delay therapy is not do thing appeared in the mind except after moments such as pray for some remembered people and go place and that is subtype from brake therapy and that is subtype from slow therapy

protein modification or restructure like ptms is by mix the molecules and then by reaction mixer like by heat or acids or both or alkaline solutions as the nitrates when mixed with heme in stomach acid form nitrosamines and as nanoplasty hair treatment is mix amino acids with lactic acid and acetic acid and ascorbic acid and apply on the hair and the acids were to induce reaction between the amino acids and the hair and they work slowly and accelerated with heat and called catalysts and reactants and

restructures and that means protein modification inducers like acids and heat mixed with molecules like amino acids for hair treatment and as the hair is protein

people have smooth hair may be have more acne as they have excessive fluids secretion from neurotransmitters like inhibitory neurotransmitters elevation like positive allosteric modulators and that cause excessive and continuous sweat and the fluids like the sebaceous glands fluids accumulate in the cells as cells pores blocked most times with the old lipids and dust not detoxified and that is appear as acne and that similar to sores and hemorrhoids and and they may be have more muscles from healthy fibers factors

sebaceous glands moisturize skin and hair and if hair cells moisturized like skin will have smooth hair

detoxifiers like sulphur soap or chlorine dioxide for acne as clogged cells pores cause sebaceous fluids accumulation appear acne and that means block cells pores with lipids

accumulate sebaceous fluids smooth hair and also the skin acne after exercise from excessive sweat fluids secretion from neurotransmitters like inhibitory neurotransmitters elevation but not ejected fluids fully from blocked cells pores cause fluids accumulation appear acne

coarse hair most times from thickness that most times from melanin and melanocytes inhibitors smooth hair as lighter hair almost never seen coarse

gases and volatile molecules cross bbb

hypointernet therapy is one from the most effective therapies in this era for productivity and countless calamities and memory and reorganize and rewire mind and priorities and set up old gotten gifts for overall life goodness and back to fitrah inducer and obsession cure and that therapy is by shut down internet or electronics for hours or days it is very powerful miracle cure and that is why does the people who quitted from the jail more active

and productive and progressive and goalful and not floundered and more increased with hyposim therapy that shut down sim and that is stimulant and busitant and tamitant and intoxicatant and dissociative but if the human stay without internet empty not busy with thing may be bothered so be busy with thing like the internet is less bad than emptiness as the emptiness lead to disability and corruption and they say in arabia language the emptiness kill noblest what in the human and the stoppage of the water corrupt it like with dirt accumulation in top layer and not damaged the villages people except the emptiness and the city people more good and taught and productive than them and not as what the people said the villages people are more good than the city people that is not true and look around some of them they are like the animals and the animals not allowed enter in the city and if entered will be disabled and the prophet and most scholars said do not reside the villages and be busy with what it is benefits you and everything depends on the needs so that is why some of the people will continue to use the internet as that the most good thing for them so there is no badness and if they leave that they maybe get damaged

ckd from neutralizers deficiency such lipids deficiency as someone before get kidney disease have gallstones and that from liquid lipids and glycerol deficiency as dissolve the waxes such cholesterol stones and will be delivered to same place as lipids and from bicarbonate and carbonate deficiency and when someone have gallstones sign from liver disease and the gallbladder not produce bile acids from cholesterol and when no bile acids the adrenal not produce steroids and the steroids like testosterone have inverse relationship with mortality in ckd people and as kidney have lipids and that means selective ckd subtype neutralizers is from steroids deficiency like from adrenal diseases like from bile acids deficiency from gallbladder diseases like gallstones like from liver diseases like from neutralizers deficiency like liquid lipids and bicarbonate and carbonate and as ckd can be from local diseases like heavy metals deposit and cells membrane blockages with toxins like heavy metals or nanoparticles or urea or blood clots or bleed or injury or tumor or microstones and infections

most people like diabetes people have kidney disease after take chromium

someone take unbalanced multivitamin and have kidney heart pain and kidney pain and already have liver disease from toxins like heavy metals toxicity and infections and excessive minerals and that means heart diseases and chronic kidney disease from liver disease and minerals imbalance like excitatory minerals like chromium toxicity and iron toxicity and aluminum toxicity and heavy metals toxicity like lead toxicity and arsenic toxicity and vitamins imbalance like excitatory vitamins like coblamin toxicity and lowered with inverse relationship molecules or neutralizers like chlorine dioxide

obsession is symptom of unorganized and unclean live room and personal unbeautifulness and prolonged wear not good old clothes and underwears and undressed hair and unremoved hair of private organs and uncutted nails of fingers and uncleanliness and unperfection and if religious not pray on time and not read the holy book every day in the

morning and before the sleep and all that always tested by thousands people and faultless

muscle contraction molecules deficiency and muscle degeneration or brain degeneration symptom is organs shake like finger point shake and that biomarker

herpes sores disease is immune deficiency disease similar to tumor and diabetes ulcers from deficiencies such as skin molecules like liver molecules like sulfate and glutathione and retinoids and steroids imbalance and menstruation compensation molecules like blood factors molecules like anemia molecules and protein and menopause molecules like steroids like progesterone and estrogen and male factors molecules like steroids like testosterone as more in females and as someone have herpes and disappeared with sulphur soap and as every one have that virus but not activated except with deficiencies and that means native viruses not activate except eith deficiencies and when someone said it is transmitted sexually sometimes those are bone marrow diseases and sometimes it is hiv or other

infections mimic herpes and that means no need to name it herpes most times

liver disease symptom is dark spots in lips and other excitatory diseases and malnutrition symptom and that biomarker

substitution and retention effect is when the body not get new molecules like new protein will compensate and retain that old spoiled protein and cause water retention until the body get new protein and when the body not had excitatory neurotransmitter like dopamine will compensate with other excitatory neurotransmitter like adrenaline and glutamate and the displacement effect is when the body take new protein will excrete old wastes and place new protein in that place and when the body take new lipids like fish oil will replace old lipids like saturated fats and trans fats and polyunsaturated fats and bad cholesterol with new lipids and that means lipids have allocated space in the body and the different lipids have inverse relationship when someone take bad lipids will lower good lipids in the body and when

take good lipids like fish oil will evict bad lipids as they have one space

low albumin in ckd as no fatty acids to bind with albumin so albumin will not appear and when calcium high from its binder high albumin as there is saturated fats and trans fats and toxic fatty acids and drugs bounded with albumin prevent its decrease

polyunsaturated fats in free form when glycerol depleted in the body same saturated fats and transfats as they are dry liquid oils when oxidized will be solid and that means neutralizers like solvents like glycerol is antioxidant and increase glycerol in oil decrease diseases

neutralizers diseases like gallbladder stones and kidney stones and ckd are mostly in thin and obesity people from neutralizers molecules deficiency like liquid lipids such olive oil contain polyunsaturated fatty acids and solvents like glycerol and emulsifiers and smothers like lecithin and

sodium bicarbonate as the cholesterol to stay dissolved need liquid lipids and smoothers and as low lipids consumption lead to not produce enough bile acids and that cause cholesterol stones in gallbladder

lipids or vitamins or minerals or protein memory effect indispensable factors found in milk are lipids like fats and cholesterol and cholecalciferol and minerals and vitamins and calcium and potassium and sugar and lecithin and water

lipids like fish oil inhibitory effect factors vitamins and minerals and protein and potassium and lecithin and as someone mixed them in warm water and soon relaxed and someone mixed multivitamin capsule with olive oil spoon and ingested some and mildly shocked similar to allergy reaction like sudden inhibitory neurotransmitters release and that means as general lipids increased multivitamin bioavailability

what make fish and milk beneficial is contain carbon and carbonate and bicarbonate and that is why does the sodium bicarbonate taste similar to the fish taste

milk ingredients
leavening agents
coagulants
nanoparticles
protein
leavening agents alternatives
leavening agents
alum
egg

lipids
suspendable lipids
saturated fats
butter
lecithin
lipids alternatives
lipids
waxes

gums
gellan gum
suspendable lipids
saturated fats
hydrogenated oil
coconut oil

alkalines
acid reactants
carbonate
calcium
alkaline alternatives
alkalines
sodium bicarbonate

someone eat spicy food not inflamed lips and after minutes drink apple juice forfeited with vitamin c and malic acid and get burning mouth syndrome and that means restored skin pain sensation and for skin diseases like tumor or ascorbic acid depleted neutralizers molecules like steroids from digestive tract systematically

zinc deficiency symptoms wide hair cells pores cause coarse hair and organs like face cells pores turned holes contain toxins deposit and skin diseases like acne and baldness as the body not able repair hair cells also the gut cells

zinc deficiency or calcium deficiency or iron deficiency symptom is reduced stomach acid cause indigestion have hiccups and low body temperature

zinc deficiency symptom stomach acid deficiency

sometimes tumor that not from local injury like burn and radiation and toxins like heavy metals and nanoparticles and infections and blockages is from excitatory diseases like high blood pressure force the body grow any way

leaky gut symptoms wide hair cells pores cause coarse hair and organs like face cells pores turned holes contain toxins

deposit and skin diseases like acne and baldness as the body not able repair hair cells also the gut cells and that like from zinc deficiency

someone were take lecithin and without sugar since months and help memory for short time and after move were were exposed to sunshine and ensure and after that improved memory without lecithin and after that not take ensure and take wafer knoppers contain calcium and protein and sugar and lecithin and kept memory good and after that take detoxifiers deplete neutralizers molecules like minerals and vitamins and proteins stored in liver and after that take sugars alone not help memory and after that take lecithin not help memory and after take ensure and icecream nutella contain sugars and lecithin and help memory and after that take detoxifiers again and after that take ensure and nutella contain sugar and lecithin and help memory and that means supplemental lecithin memory effects factors or acetylcholine factors and muscle contraction molecules and sweat factors molecules and nutrients process factors molecules indispensable factors

are minerals like alkaline minerals like calcium and carbonate and bicarbonate and vitamins and protein found in ensure and sugars and lecithin

any one from those when repeated are initiate and promote and increase the faith and aqeedah and anyone from them like the faith in god deeds when repeated will replace the human unwanted others faiths like the rare sex faith as every homosexual human are believer in the rare sex and the fears faith as every scared human are believer and will initiate and promote and increase the encouraged others faiths like the love faith to stay lover and increase the desire to do again as every lover are believer in the loved thing and the abilities faith as every strong human are believer in the

owned abilities and other good things faith and that were free boost as the faith in god deeds renewable and lot available and similar to that is the work and the exercise and the fight and the love and the faith is the human battery life
every believer meditate most times

some steroids are classified alcohols like cholesterol and estrogen both are contain hydroxyl group same ethanol and that means the human body tell us every steroid is similar to ethanol and psychoactive but have different psychological effects and able reach intoxication even if not have hydroxyl group same ethanol as they are classified steroids from the body study when seen treated same and different than the most others and that means will have same effects and as the female who have good estrogen level are full of activity and vitality and life and entertain in the life and encouraged more to be female and nice and show more femaleness and the male who have high estrogen level have the option to be like the female and show pseudo femaleness both if wanted that but

conditionally as renew every day in every hour and that is temporary and the male who have high testosterone are encouraged to be male and aggressive and the human who have high cortisol level encouraged to be stressed and depressed and the human who have high allopregnanolone inhibited more and that means steroids are psychoactives some from them optional encourage and give the human options to use and show its effects like estrogen and testosterone and some from them obligatory like allopregnanolone and steroids similar to alcohol

people have obsession that will not stay except weeks or months not exceed single year in their life as they are not created to torture from the obsession and did anyone not see around how people changed every year differently far away from the previous things because the god said surely you will mount on layer far away from previous layer and the first layer were during the pregnancy and the second layer are multiple layers were during this life and the third layer sleep and the fourth layer were the death and fifth layer were the afterlife so doctors do not worry it is just year

they said reverse osmosis have seme permeable membrane that allow just water and similar molecules like gases and volatile molecules and solvents and that is means cells blocked with toxins like bpa and nanoparticles and heavy metals pressured with gases like chlorine dioxide or nanoparticles like lipids or solvents like dmso will emulsify them and trap them to the other side

carbon dioxide impaired in ckd like from no bicarbonate produced by kidney like from no neutralizers like alkaline minerals like zinc and carbon dioxide regulate calcium and phosphate and they have hypocalacemia and when oxygen elevated as no other gases will cause vasoconstriction and the vasodilators and bicarbonate and carbonated water for ckd

edta disodium enema lessen constipation and soften waste like the mucosa cells were blocked with impermeable heavy metals like lead and arsenic and radioactive minerals and nanoparticles like graphene oxide and microcrystalline

cellulose deposits from food as someone constipation initiated after the poisoned khat plant ingest and that means binders like chelators like edta or lipids like waxes like lecithin or steroids like cholesterol or bee pollen or activated carbon or dyes orally and intracolonly like enemas or colon irrigation for chronic colon diseases like constipation and tumor and irritable bowel syndrome and autoimmune diseases and that is why they forbid edta oral administration to not trap heavy metals in digestive tract

obsession from depression as when someone tired will despair

they said urea and trihalomethanes not neutralized by chlorine dioxide in typical water treatment and that is means calcium hypochlorite used for some diseases like ckd urea accumulation and tumor by oral or intravenous or infused with dmso topical or intratumor and tumor cells toxins not neutralized are treated same heavy metals and trapped by dmso alone topical that take them to lower for detoxification or binders like adsorpents or chelators like

activated carbon or acids like edta or dyes like prussian blue or proteins or amino acids or emulsifiers like lipids like fatty acids or waxes like nutrients transporters vehicles like lecithin or steroids like cholesterol or bee pollen or electron carriers like ubiquinone or laxatives like local water drawers like osmotic laxatives or mannitol with dmso topical

the human lusts wanted by the god are food and sex and suffer and sadness and worship and fear and coercion and overpower and humiliate and tests and patience and relax and lost and busy and eat and anger and fight and learn and science and and progress and training and works and compete and repute and survive and love and laugh and good deeds and evil deeds and speak and silence and dirt and purify and any of them are either stimulant or relaxant as most of the human deeds are either stimulant or relaxant as want inhibition and excitation to feel alive as were like about to die similar to the waiting that with ascendative inhibition before the sleep take and that is excuse for the sudden deeds such as strange speech and all of these are lusts wanted by god for creatures needed entertainment

and without them no life or warm feelings and potently triggered miraculously only conditionally voluntarily or involuntarily like eat

zinc have inverse relationship with systolic pressure as after ejaculation zinc depleted and utilized for synthesis and caused high eye pressure and called post orgasmic illness syndrome and that means high eye pressure needed after ejaculation to refresh and for infertility

serotonin syndrome is excitatory disease and relieved with excitatory diseases molecules like high blood pressure and anxiety and agitation and restless legs syndrome molecules like excitatory neurotransmitters blockers like beta blockers and vasodilators as serotonin act in 5ht2a is vasoconstrictor

brain memory work like fetch memories depend primarily upon the muscle contraction molecules such dopamine and acetylcholine and serotonin and adrenaline and histamine

and those are vasoconstrictors and from fluids secretion factors molecules as when someone take antipsychotics their head muscles relaxed and were unable to fetch the memories and that means acetylcholine are depend on dopamine

lecithin powerful ten times more than fish oil omega three for brain memory

lipids like waxes like bee pollen trap nanoparticles like graphene oxide and heavy metals from gut to excrete as emulsify them and be larger to excrete and that means constipation molecules like fibers trap them out and other emulsifiers like lipids like waxes like lecithin and steroids and they are nutrients transport vehicles help same bee pollen

know if the molecule excitatory it is vasoconstrictor or overdose cause excitation like excessive serotonin will act in most receptors with 5ht2a cause serotonin syndrome or

used for inhibitory diseases like fatigue and the excitatory minerals are transmit electricity and heat like iron and lead and aluminum

sometimes molecules excitatory but their derivatives inhibitory such as glutamate or serine

sometimes mineral overdose excitatory in severe nutrients procession factors deficiency and inhibitory in healthy people

sometimes selective inhibitory molecules like niacin want fuels such as lipids or over time will cause paradoxical effects and that means just supply all known inhibitory molecules together chronically

sometimes some inhibitory molecules fat soluble appear excitatory from liquid lipids deficiency

sometimes excitatory molecules are deficiency dependent inhibitory molecules

sometimes inhibitory molecules have paradoxical effects in

overdose appear excitatory molecules

sometimes inhibitory molecules especially overdose deplete stronger inhibitory molecules such as magnesium and zinc and potentially carbonate and bicarbonate and sulfur and thiols and protein and that cause paradoxical effects excitation

sometimes molecules toxicity such as acetylcholine toxicity cause paralysis and acetylcholine blockage cause paralysis

about the inhibitory molecule is vasodilator or overdose cause inhibitory diseases like fatigue or muscle weakness or sleepiness or drowsiness like magnesium or deficiency cause excitatory disease such as psychosis or seizures or insomnia like magnesium deficiency or biotin deficiency and inhibitory minerals inflammable like lithium or sulfate rule

serotonin act in 5ht2a is excitatory as vasoconstrictor

every molecules group in the body is in inverse

relationships and that is like the alkaline molecules group like bicarbonate have inverse relationships with other alkaline molecules and the alkaline minerals like zinc have inverse relationships with other alkaline molecules like copper and calcium and bases dual acids minerals like lead and that is like the gases group like oxygen have inverse relationship with nitrogen and that is like the amino acid derivatives group like glutamate have inverse relationship with gaba and tyrosine derivatives like dopamine have inverse relationship with noradrenaline and that is like the lipids group like steroids such estrogen have inverse relationships with testosterone and bad cholesterol plaque and the liquid lipids like the fish oil and olive oil have inverse relationships with other blood lipids like cholesterol and triglycerides and trans fats and all those are classified properties molecules groups and in addition to the muscle contraction molecules like serotonin that act in 5ht2a have inverse relationships with other contraction molecules like dopamine and noradrenaline such when the dopamine are blocked will cause the other muscle contraction molecules like serotonin and noradrenaline elevate gradually and that were from the inverse relationship and cause akathisia

glucose not enter astrocytes from nutrients transporters deficiency like lipids like solid lipids like waxes like lecithin and steroids like cholesterol and for brain diseases

soap therapy is when someone washed the body with soap and sweat after that and were not sweat from before month and that means the strong soap like sulphur soap or edta or dmso with chlorine dioxide or edta with dmso will detox the skin surface and the deepest cells blockages like lipids and dust and nanoparticles and heavy metals deposits and and that increase sweat to excrete toxins and for detoxification and tumor

the faith replacement therapy for the primary mind exist in the heart and work independently with higher priority than the brain mind in the stressful or emergency conditions like the sickness and the fight and the fear and the work and in the inhibition conditions like the meditation like khushu and the isolation and the most times and that memory contains

the faith and just memorize the external ready things when the human intended voluntarily in the stress conditions and the inhibition conditions like memorize the quran verse and the incidents and the speeches and remember those from the heart as they were untouched and that is means about the primary memory that in the heart is just read only in all the times but the human remembers from that just in most the times and write conditionally only like in the stress and the inhibition and that is initiate and promote and increase the faith in the memorized things and that primary mind in the heart fuel is the faith such like by the remembrance of the memorized things and that is why the human not have the faith is not stay intelligent and strong and active during the sickness and that means every stable diseased is from the believers in the life and that is why the human not have the faith is not stay intelligent and strong and active during the fight so every good fighter are believer and that is why the human not have the faith is not stay entertained during the asr so every good worshiper is believer and that is why the human not have the faith is not stay complete works of the intended goal so every good worker is believer and for the second mind that in the brain and that is the usual and

the strongest mind selectively as the other mind in heart is the commander who is the first planner and motivator and the visualizer that looks and where goals vision stored and the brain mind is the executor that is follows that mind and the only free mind for the personal productivity such is like the made or generated thought or sophisticated things like the math but still depend upon the primary mind vision and the already stored goals vision and the faith and that is say the heart is contain live vision like the eye that can visualize the future as the believer in allah look by the light of faith in the heart and that light comes additionally after memorized the islamic knowledges in the heart memory and remember the memorized things repeatedly here allah puts his light in the heart that will light around the heart vision or the light is the new adopted vision and that benefits the believer see to the unseen knowledge selectively and known as firasah and the god messenger muhammed said beware from firasah of the believer as he sees with the light of allah and in addition the heart contains the stored goals vision and the faith and the primary memory and that means the human who wants the rare sex wants that after were in stress that memorized the incident voluntarily in the primary mind in

the heart and the memorized in heart is initiate and promote and increase the faith as will remember and love and miss that thereafter the incidents in the most times so that is faith and similar to the human who want straight sex and to treat faith diseases the rare sex or the fear or the ptsd the human need enter to the similar stress or inhibition condition for modification and the condition inducer are initiate and promote and increase the faith exists two types excitatory condition inducers and the inhibitory condition inducers any promote new faith and the excitatory condition inducers such as with exercise and the intense straight sex and speak and sing and dance and the socialize and digital porn and martial arts and fight and the news and sexual stories and soical media and travel and the other overstimulation excitatory activities are same and the inhibitory condition inducers are such as quiteness and the meditation and pray and khushu and quite religion and the warm conversations and the tranquilize speeches and the quite songs and nashids and holy book recitations and the love and sadness video stories and inhibitory drugs and the effectivity more with encouragement words hint during the excitatory condition or inhibitory condition and such as

the talk therapy like you skipped that incident and not want the rare sex any more and that overwrite their knowledge or the self intention for solution and better life is enough and the khushu and pray and quran recite and qiam al layl what the muslims and jewish do and they skip every thing and the humankind able see them steady no magic nothing else

and that needs enter to similar stress condition or inhibition climax conditions for modification suchlike with exercise and intense straight sex and warm speeches touch the heart suchlike the quran and faith and prayers and qiam al layl and memorize quran verses after wake will be memorized voluntarily only and that is overwrite and the similar for the deeds addiction like the fight and laugh and fear and phobias and ptsd are used and the straight or rare sex predestined from the god upon some from the people after years from cause disruption to calm them suchlike arabic country neighborhoods children

earphones activate parasympathetic nervous system as elevate body temperature as the human hear the voice more than the human unclear and low voice like were distracted before

stay unknown
work

schedule therapy is intend to do work in upcoming hours

like dress head for video record after some from the time and that is happen everyday in the morning spontaneously before go to the work and like schedule sex in the eight pm and that is similar to scheduled islamic prayers and that is initiate and promote and increase the faith and how is the scared human fear with expect what unloved thing in the upcoming hours so what if flooded with scheduled works like in the work will change the faith and be good believer and that is neuromodulator and type of faith replacement therapy and for the faith diseases like most psychological diseases like obsession and depression and ptsd and rfsd

almost any mineral deposit induce apoptosis and inhibit cells proliferation and for tumor as iron induce ferroptosis and zinc induce apoptosis and they used platinum for tumor

some people they use some poisons intratumorly or orally for tumor like the poison will reach the clotted cells head and that is increase the need to repair as increased the clottage and damage and the body will send neutralizers

like anticoagulants and that help

cough is from dry mucosa cells from heavy metals toxicity and alkaline molecules deficiency like zinc and bicarbonate and sugars and from infections

brain diseases almost first cause is heavy metals toxicity

depression from obsession as remember past bad thoughts

water in container necessary for electricity transmission and that means as the human cells dry by default but there is fluids in cells from fluids secretion factors necessary for electricity and neurotransmitters and thermogenesis as fever have runny nose and for inhibition diseases like fatigue and tiredness and disability as electricity and excitatory neurotransmitters like from stimulants and hyperthermia all like during sex are excite the body

name words disease and abbreviated nwd is when the human see the illness names suchlike psychosis and jump and run believe and not have them and they think they are have them to handle them as they love handle but that were wrong and haram like who spend his power and money and age and say ok i will prove that and do meaningless deeds to prove his name is not amir but his name is amr and one look around when anyone tell someone have adhd will believe and not have it

stimulant and relaxant lust is from the human instinct as most of the human deeds are either stimulant or relaxant as want inhibition and excitation to feel alive as were like about to die similar to the waiting that with ascendative inhibition before the sleep take and that is excuse for the sudden deeds suchlike strange speech

the heart is the second mind as the god in the quran said does they were not have hearts they tie by them and the tie is do aql and derived from aqil and that is refer to memorize

and remember and as the human feel the heart contraction differences and orchestras and cascades during think and sadness and shock and anger and relax and as the human have heart disease have forgetfulness and other memory diseases and that is inspire every human who have heart disease are have forgetfulness disease as some from the people before they have forgetfulness disease their first disease were heart disease and may be every human who have forgetfulness disease are have heart disease and that is inspire may be the heart is the primary mind that is work independent in the stress or emergency conditions suchlike the sickness and the fight and the second mind is the brain and that is the usual and the strongest mind as it is the only free mind for the personal productivity suchlike the made or created or generated thoughts and sophisticated things like math and the primary memory in the heart is only memorize the external ready things when intended voluntarily suchlike the quran and incidents and speeches and remember them as they were untouched from the heart and that is promote the faith and that means the human who want rare sex want that after were in the stress condition that is memorized the incidents voluntarily in the primary memory

in the heart and remember that most times like faith and similar to who want straight sex and that needs enter to similar stress condition for modification suchlike with exercise and intense straight sex and warm speeches touch the heart suchlike the quran and faith and prayers will be memorized voluntarily only and that is overwrite and the similar for the deeds addiction like the fight and laugh and fear and phobias and ptsd are used and the straight or rare sex predestined from the god upon some from the people after years from cause disruption to calm them suchlike arabic country neighborhoods children and that is means the primary memory in the heart is read only in all the times but the human remember in most times and write conditionally

acidic cells tumor from local heavy metals deposit cause dry cells or systematic heavy metals toxicity as lead cause dry mucosa cells and that means almost first tumor cause is heavy metals toxicity

the human body when create bone need alkaline minerals

not demand specific mineral but the highest specialization alkaline minerals like calcium will be taken more and that is friendly may we say fortunately and that is means alkaline minerals mimic each other and have inverse relationship with each other and chelated same and detoxified same and treated same and that is why the toxic alkaline minerals suchlike lead are historically given will be distributed always to bone and brain and lung as the human major organs are consist from alkaline molecules as the nature base primarily all times and alkaline minerals are called base not acid and as the alkaline minerals like lead and radium and cadmium are mimic alkaline minerals like calcium and they are cause bone diseases as mimicked calcium is from bone molecules among other alkaline molecules like cholecalciferol and that is means the poisoning from the toxic alkaline molecules like hydroxides and alkaloids and alkaline minerals like lead and cadmium and copper and radium and the most radioactive alkaline minerals everything are detoxified as same like with alkaline minerals like calcium and zinc and magnesium and alkaline molecules like bicarbonate from zinc and hydrogen and alkaline minerals like calcium chelators such edta and why

those because alkaline molecules and they are include bicarbonate and hydrogen and hydroxides like from calcium hypochlorite when dissolved and alkaline minerals like lead and calcium most they are mimic each other and most have inverse relationship with each other and most are chelated same and detoxified with same each one toxicity treatment as they detoxified lead and cadmium with calcium chelators like edta and radioactive alkaline minerals with bicarbonate and lead toxicity increase with zinc deficiency and that is why hydrogen water help brain diseases from heavy metals toxicity as detoxify them and restore high ph as the organs nature base and that is means selenium overdose prostate tumor reversed with other alkaline molecules and inverse relationship minerals

calcium and magnesium have inverse relationship with radium as they are alkaline minerals and that is means radium toxicity after diagnostic image like xray excreted with calcium and similar to calcium chelate like edta and heavy metals deposit bone is treated with bone molecules like calcium and cholecalciferol and that means radium

toxicity treated same other alkaline minerals toxicity like lead toxicity

human organs like brain are high ph and called and alkaline and base as from its name the default base and when there alkaline molecules like alkaline minerals like zinc deficiency the organs will have abnormalities and never work good and similar to semen sperm will not survive and divide except in high ph environment and organisms grow quicker in high ph food and that is inspire organs grow more in high ph environment

lithium have inverse relationship with sodium and potassium and hydrogen when anyone elevated lower others as they are akalis metals and similar to alkaline minerals like calcium and that means lithium toxicity caused akathisia reversed with sodium and that means lithium is sodium channels blocker

when the human act are eat and read book and speak and

pray and listen songs and soical platforms and everything else are psychological food and tell me what you take i will tell you who you are and what if the human eat allah words and your body created from soil so its food from earth and your soul created from heaven so its food from heaven and that is from the islam religion and its five prayers daily and the noble quran and duaa and blow ruqyah words in water and drink as protection and as antidote to evil eye and sihr and jinn possession and the soul other diseases and all of those righteous deeds happened in khushu condition and that is the eating itself

liver is similar to refrigerator when diseased not produce and store nutrients preservatives and they call them antioxidants like glutathione almost everything taken like protein and lipids like phospholipids and some vitamins and minerals will be oxidized and spoiled and that is the secret importance from antioxidants specifically in the diseased people

sinful surveillance disease

most times the refuse to bad thoughts is by feelings without any further words as the human back to his nature not use language as the language come after three years from age and that is show him false guilty as misinterpreted he accepted but he is not accepted that truly and most times the human leave everything suchlike bad thoughts and intention and back later to correct intention and that is show him transiently false guilty

rare times the spontaneous and pure and innocent and kind human intend to please them suchlike justify and assume and interest and expect and wait for their praise suchlike seek certificate of good character i know it is strange but the god predestined and from the pure nature and when i am the already hated and criminalized and discriminated and listed enemy and tried to kill me more than ten times and who are the attackers eyes on and they used country against i will be hated except if the spiers are wise and realistic and aqil and that treatment not used upon the other oppressed people except me and i were special oppressed human extremely rare that i never found

someone like me in my life even in the movies

the oppressed likely to be false negative is when his head overcontracted and full that reached the contraction climax from the excitatory diseases like high blood pressure and restless legs syndrome and agitation as that induce acuteness of the think

when the human intend want deed prolongedly even if over days but not did that in the end after decision still innocent and pure and vertuous as when someone heard if you want alcohol tell me he will take seconds for think and in the end refused and the difference here were only the amount time and the god said in the quran and she desired the prophet joseph and he desired her but except he saw the evidence of his lord and denied that we deter the badness from him surely he is one from our chosen and purified and sincere slaves

from the god predestination is some oppressors not able to stop even if they intend the god say no because he want justice as supposed not disrespectful things such insultful false apology and truly uncorrected reputation and

knowledge and that stage is when oppressors and oppressed human not know they still oppress and the god trap them with sufficient things to them only most times and even from oppressed people such definite strange inhibition and weakness and ignorance and isolation and disabling and frivolous deeds and that create deceptive reality i am not what i appeared and i did not accepted that and previous knowledge is from their responsibility and without them the oppressed people never gained lot goodness

heavy metals like lead and cadmium and arsenic bounded to same proteins like hemoglobin related and treated same

who have ckd from heavy metals toxicity and not take edta draw blood and infuse edta and filter metals complex and return blood or whole blood transfusion

absorption diseases from blocked cells with toxins like heavy metals as someone have constipation and difficult

excretion and not absorp ingested solutions and intracolon solutions like from heavy metals poison specifically deposited in cells and cells blocked detoxifiers molecules help

forgetfulness after psychological traumas from sudden excitatory diseases like high pressure neurotransmitters release damage memory like calcium flood that in locked in syndrome or from continuous self stress cause excitatory diseases like anxiety and high blood pressure block past memories remembrance and deplete memory molecules like muscles contraction molecules like acetylcholine

generoused and magician and vertuous isolated

when remind the people with goodness that you know from before you will benefit from that goodness like first time and that remind power good to you and the people and the god said remind as reminder benefit the believers

nasheeds therapy is pure songs those are vertuous and natural and not stimulate and take human to paradise world that is in afterlife rightfully and subtype from inhibitory therapy similar to inhibitory molecules like xanax and suchlike يزيد الدوسري الجنة نشيد and the general rule when anyone want something appear in different language the human should search in same that requested language as when someone where do search about balsamic vinegar the human did not find any details and wasted his time and energy and after hours become mad as not everything will be shown in english language at search engines ever and that is very deceptive and stealth and serious and the relief were easy searched in italian language and knew everything secret

rare sex remembrance neutralizers
not cooperate with the sudden obsession malicious random thoughts trap that buy new wrong belief were not except to relax fully this time with silence the mind from the previous unsatisfied mind conversations like terminate the ongoing neglected multiple mind conversations as relaxant but it is

the wrong relaxant and the relaxants not the physical drugs only and that trap suchlike the god intended to create me in the other gender but mistaken and those words unneeded basically and that is unloved relaxant

overinhibition toxicity

islam religion
the five prayers daily
recite quran
qiam al layl
islamic lectures
relaxed sujoud in prayer to god suchlike lay upon bed able to stay hours easily and effortless and similar to overflexion and overrelaxtion during choose relaxest back butt curve position
say to god similar words suchlike o god tam me and subject me to you and increase me obey to you

see righteous youngers and olders recite quran and nashids
pray in masjid

nature molecules
sing

shift remembrance from sex to righteous deed as last deed overwritten in memory and that decrease urgent craves and enlarge mind and that were neutralization

sins remembrance neutralizers
brain drive mode inducers
excitatory deeds
stress deeds
disruptive deeds
excitation deeds
music
vagus nerve stimulation activities
sing
overspeak
scream
exercise
sex
dance
deep inhibition deeds
meditation
quiteness
seriousness

prayers
khushu
cry
unpack wrong thoughts roots
remove wrong thoughts roots

war rockets neutralization
fireworks
music

bind identically to human brain and that use in ptsd they say prolonged exposure or identical exposure therapy

shift remembrance from sins to lesser sins such as music as last deed overwritten in that memory allocated space and it is decrease talbis and remembrance and urgent craves and urges to do again as were closer and enlarge mind and that is why does some from the people appear overexcited that were cure hour and that were neutralization rare sex reversal

anus muscle contraction prolonged effects inducers
muscles contraction prolonged contraction inducers

ejaculation
exercise
excitation
excitatory molecules satiety
stimulants
caffeine
urinary retention inducers
selective inhibitory molecules blockers
antihistamines

why does people do rare sex activities
rare sex mechanism effects
stimulant like toys similar to watch digital porn
air refresher
anus muscles relaxant
anus muscles relaxant so other muscles relax
inhibitory thing
muscles relaxant
heart muscles relaxant
blood pressure lowerer
vasodilator
excitatory neurotransmitters inhibitor

dopamine blockers like
beta blockers like
so that is why does the people inhibited thereafter and excited after excitatory activities above like straight sex ejaculation induce anus muscles contraction and shower and speak

high blood ph reduce calcium presence in blood and show hypocalacemia and that means blood ph affect molecules presence and show false levels and that means when they give hyperbaric oxygen that lower carbon dioxide and by that cause high ph that reduce calcium presence in blood as necessary balance because the oxygen is lower carbon dioxide and that elevate some blood alkaline molecules like bicarbonate and some other alkaline molecules like calcium will be taken out transiently as the blood ph is already high from some other alkaline molecules and that is the alkalinity deleterious molecules passage from blood deposit to cells balance effect and that is simple inverse relationship as the alkaline molecules have inverse relationship with each other and low ph release minerals

from bounded proteins as cadmium bounded hemoglobin released after low ph and that means use carbon dioxide to lower blood ph will increase minerals like calcium and heavy metals like lead presence in blood and dissociate minerals bounded proteins to blood and those are increase chelators like edta effects and that is with hold breath or carbonated water and that means when the human not breath and oxygen low and carbon dioxide elevated and be low ph the cells and proteins release its compounds like compensate as response like in brain hypoxia release calcium and heart attack release troponin and low ph hemoglobin release cadmium and that means low ph cells tumor release its compounds appear swelling and genes mutation from low ph from defective alkalize factors like alkaline minerals like zinc factors like transporters blocked and detoxified with zinc or chelators or detoxifiers like chlorine dioxide or like bicarbonate factors or calcium not brought to cells like from cells proteins already bounded with heavy metals like lead from ptms wrong or like from blocked oxygenation factors like blood vessels and that means minerals like calcium bind to proteins factors like calcylation and calcium hydroxide that for calcium salts

substitutes like free blood hydroxide or hydrogen or hydrogen peroxide and enzymatic proteins have hydroxide or hydrogen or hydrogenase and like high ph like with bicarbonate restore ph high as it was before oxygen deprivation and sometimes like low ph like with the general molecules binders known as chelators like acids like hydrochloric acid and edta all those when given after low oxygen accidents diseases or low ph from alkaline molecules deficiency diseases like liver attack appear seizure and heart attack and brain hypoxia like locked in syndrome all those when given after open brain blood barrier temporarily like with dmso will rebind released molecules like calcium to proteins or detoxify them and more with chlorine dioxide and that means sometimes elevated calcium like in people before cancer from acidic blood like from bicarbonate deficiency like from zinc deficiency and not bounded proteins and that means other factors like blood pressure and gravity and osmolality similar

calcium is inhibitory as tetany muscles hyperexcitability and

seizures and cardiac arrhythmias and cardiac arrest from hypocalacemia as calcium is the usual muscle contraction molecule will be substituted with unsuitable contraction molecule cause overcontraction and overdose cause fatigue and that means hypocalacemia diseases are excitatory and high blood ph lower calcium and from low magnesium and cholecalciferol and potassium and hypoparathyroidism and hyperventilation lower carbon dioxide and that elevate blood ph and reduce calcium

excitation and stimulants and excitatory diseases climax prevent obsession head muscles sudden erection because almost all muscles are contracted already and the human are used to live naturally in that condition and any thoughts from obsession will not destroy entertain in the human who were had excitatory diseases dormant not relaxed enough and not excited enough but between them and that is bad and to not fear need inhibition or excitation and inhibition is preferred as the people who taken inhibitors like wine and khushu are not fear and that is similar to low temperature treatment and high temperature treatment not between

them for preserve food

vitamin c deplete zinc

fish ingredients
carbon
carbonate
bicarbonate
fish oil
protein
sulfate
calcium

describe problem and give guidance to others is enough to end it if you have it and that is why guiders are not have calamities

edta dose 50 mg per body kg per day parted five doses not exceed 2.5 g and not more than five days and with minerals and vitamins after hours from administration and that dose

is for who have normal and elevated calcium level and if low correct that and the human blood contain calcium 525 mg and how much edta disodium to excrete 525 mg calcium in blood is 5 g edta deplete that so the dose not exceed 2.5 g per day and 1.2 g or 600 mg in 250 ml water during minutes or about hour tolerable and that water to excrete minerals for kidney and when given enema drink 500 ml water after enema and oral give will be neutralized in hydrochloric acid or will drain its whole chelate power to bind minerals those are essential most times and not toxic those are stored in the digestive tract and that is make minerals complex not absorbed and excreted and that is will cause essential minerals deficiency and that is means oral give is less effective like five percent compared to intracolon or intravenous or topical solution with vehicle like dmso and as general rule most powerful chelators like activated carbon and edta will not be absorbed as they are like to receive electrons and that drain its chelate power when bind with the gut minerals and that is form complex most times not absorbed in the digestive tract and not to be received by the digestive tract cells and as someone take five hundred milligrams oral edta and have excitation and

tetany and that is similar to when people excited and agitated and hyperactive after eat food with edta

some minerals contain or derive from them carbon or carbonate or bicarbonate like zinc antiminerallopoison and most minerals with include toxic minerals like cadmium is chelator that similar to hydrocarbon gas derivative edta and as generally sudden give high dose mineral deplete other minerals especially inverse relationship minerals like take space from blood minerals allocated space and that is means heavy metals poison like lead poison is deplete other minerals as when poisoned take days to show toxicity like deplete other minerals to have space and that is means essential minerals deplete lead and reverse lead toxicity effectively

zinc kick almost all minerals like chelator as have inverse relationship with lead and cadmium and its derivative bicarbonate with radiation minerals

lead mimic calcium and give calcium compete lead and that is eject lead and that is means calcium have selective inverse relationship with lead

administration routes

topical
solution mixed dmso

intracolon
solution
solution mixed dmso
suppositories

oral
intravenous
intradermal
intramuscular
alternatives
topical
solution mixed dmso

topical work but slow and solution maybe evaporated before absorption

intravenous
intradermal
intramuscular
alternatives
solution mixed dmso

topical solution with delivery vehicle like dmso effective same intradermal and intramuscular and intravenous without injection

intracolon similar to intravenous and best than oral when oral give not work

heavy metals symptom excitatory diseases and with its subtypes

most receptors ligands like estrogen and catecholamines contain hydrocarbon part like benzene ring or catechol to bind and that is means benzodiazepines contain benzene bind to gaba receptors and estrogen inhibitory

some people they are not mad but they have forgetfulness and obsession and they are tired from try to fix thoughts but unsatisfied and flooded more and accumulated and stopped from try to return everything perfect because destruction exceed repair ability and when everything sabotaged the human tend to left everything sabotaged even in mind words appearance like pray to god to guide them and appear teach them english and as not rewarded and satisfied and relieved

lipids contain hydrocarbons and bind to minerals and exerted with digestive tract fluids eject like with statin

zinc and cadmium and chromium and tryptophan derivative picolinic acid similar

brake deed or brake habit or brake therapy is not do deed suchlike talk to human and telephone call and sex and listen music and start decide moments formally and walk to place outside and electronic purchase and browse the instagram except with act such write on paper open before open and write close before close or organ sign such is finger swipe on finger as like switch on and off card swipe and reset with sleep or intend take decision to clear all forgotten ongoing tasks with start decide moments by finger swipe on finger and end with finger swipe on finger and humans did that from before more than three years and perfect and organize and goodness

dry mucosa cells such throat inducers like lead act as selective anticholinergic and antihistamine

mobilizing agents release stored lead in bone and called bone marrow to blood as during pregnancy and increase chelators effects

heavy metals detoxified with bicarbonate have inverse relationship with zinc as bicarbonate from zinc and other bicarbonate precursors and zinc derivatives and zinc containing molecules and detoxified with them

someone have high blood calcium and that is not calcium but minerals like lead mimic calcium and not processed and that is means lead poison

they said most lead bounded with hemoglobin and that means chelators like edta and lead inverse relationship minerals like zinc detox slowly as lead in cells and blood will be excreted and compensated with disassociate lead from hemoglobin as equilibrium and when the proteins bounded toxins like heavy metals or nanoparticles like graphene oxide detoxifiers like chlorine dioxide used before inverse relationship minerals multiple times help and chlorine dioxide can detoxify alone as no body proteins and no protein intake and will be excreted and that is need intense take that is known as full dose allowed in day and strive to chlorine dioxide everyday for allowed period and

chelators like edta work different they eject or dissociate lead from bounded proteins and chelate to complex and exert

cadmium inhibitory as iron have inverse relationship with cadmium and iron excitatory

metals like lead deposit in bones and cause joints pain detoxified with bone molecules like calcium as lead have inverse relationship with bone molecules like calcium and zinc and iron and cholecalciferol and those heavy metals detoxifiers for bone diseases

lead symptom low blood active vitamin d like in ckd

they said ckd from heavy metals like deposited in kidney and exerted with minerals detoxifiers like chelators and prussian blue and minerals permeate increasers or minerals mobilizers like dmso oral high dose or topical with metal ions chelators like fulvic acid or dithiols or place kidney in

container with water and dmso and will eject metals

they said dithiols compounds work by prevent heavy metals from bind to sulfhydryl containing enzymes and means protein detoxifiers like chlorine dioxide breakdown enzymes and exerted

someone young hear heart beats from before years and have unknown brain diseases like repetitive forgetfulness and heart diseases from ongoing stealth acute lead poison and heavy metals poison and infections as people use edta for heart and alzheimer and other unproven uses from fda

someone have heavy metals toxicity that caused dry mouth and drinked soda drink contain edta and lessen and exerted like petroleum mixed with water and means products contain edta for heavy metals toxicity

forgetfulness therapy is inhibitory molecules like alcohol and antihistamines and anticholinergics and antipsychotics

induce forget to some memories and sex with digital visual adult content overstimulation induce forget to obsession and forgetfulness is mercy from wrong understand and when someone healthy given invega sustenna his memory not back to before naturally but still good or affected from poisons and infections

when use browser less bad than soical media applications like facebook and twitter and video platforms

excitatory diseases symptoms is listen to profanity songs and dj and fast talk and randomness and excessive unhelpful socialize

when someone have dry mouth from drink sips poisoned water cg roxane contain arsenic and lead and uranium and bromoform and microplastics or dried street cannabis contain arsenic and lead and anticholinergics block fluids secretion factors and eased with green tea and multivitamins and glucose with citric acid and rice with and

spices and hot sauce and wafer knoppers contain lipids

obsession from depression when body tired make focus to mind

inhibitory molecules for repair and immune system as someone take multivitamin and before sleep inhibitory molecules increased ratio to excitatory molecules and felt thermogenesis in head organs

chromium related to nicotine like acetylcholine nicotinic receptors agonist as chromium nicotine and inhibitory as used for excitatory diseases like diabetes and vitamin b5 related to calcium as calcium d pantothenate

chlorine dioxide
liver ingredients molecules
conditional essential molecules
nac
inhibitory molecules

neutralizers molecules
honey
lipids
cod liver oil
multivitamin
zinc
fulvic acid
protein

spier episodes is when anyone watch someone know about that spy or not know and listen to wish songs and for you god i live songs and speech to the people in general and isolation speech to soul and cry and anger and laugh and silence and other emotions and free movements and pray to god for goodness in paradise and mercy for people and him and he think about that it is was to get power from him and other things such songs to him and he do wrong deeds

restless legs syndrome somewhat different from akathisia as it is in diseased people like parkinson disease and that sometimes relieved with stimulants like cheese like restore

dopamine production and release and akathisia worsen with lipids as dopamine blocked and relieved with dopamine agonists

fake win disease is subtype from obsession when oppressed allow obsessions and those include uncalled prayers and profanity to suppress him and cause him feel uninnocent and satiated like he did deed and he is deceived

yourself effect is when people treat innocent as guilty and he act like guilty from treatments and they motivate more when they see and that increase in recycle loop and that meaning when you treat someone as engineer he will be engineer and miraculous he will be miraculous and good he will be good

nervous system speed meter is words and movement speed

rare times when human too young and distressed or when

human diseased with excitatory diseases such anxiety and obsession and forgetfulness and inhibitory diseases in brain areas such depression and those appear agitated partially and depressed partially internally and inhibited externally such staying in single place paralyzed for long time and more increased with general inhibition like staying in home room for long time can have sudden heart distress or weakness episodes appear as transient human body control ignition unnaturally and suddenly from fitnas such satan whispers about sex and his recent traumas and experiences and mistreatments and tortures and they are from sudden temporary excessive excitatory neurotransmitters release and those are called phobias episodes and same panic attacks and similar to seizures and those are from excitatory neurotransmitters toxicity diseases such anxiety and obsession and forgetfulness and they are called rfsd and cured with exercise such sex and just walk minutes and dance and pushups and martial arts and vagus nerve stimulation such speak and sing and most times they are from toxins and ongoing stealth infections

when there is excitation from excitatory diseases no inhibition no repair

almost all psychological diseases or behavior normal diseases or think diseases without or with physiological abnormalities or disorders or behavior pseudo diseases or behavior nordiseases other than usual depression but not all and usual anxiety but not all and usual forgetfulness diseases but not all is subtype from obsession even psychosis as obsession is first silent psychosis and as psychosis initiated as obsession

text affirmations when anyone write i do not be angry from family disappointments he will not be angry and it is as new start point felt just soon after not just imagination and when write i do not graduate he will not graduate

when central nervous system fast like helicopter flying upper head and that called mind over hair and when slow like being in heart and mind and other below organs

when there no antioxidants such as glutathione everything like lipids like phospholipids and choline and vitamins and proteins like neurotransmitters and nutrients and recent taken supplements will spoiled damaging them and that was as preservative

involuntary and voluntary problems production disease or involuntary issues production disease or false problems generation disease is subtype from obsession when someone create new problems in himself during inhibition conditions like relaxation depend on his maximum power expected to be busy with them resolving as forcible compulsory psychological pain early load substitute for outside problems to feel full and busy and torturing more than enough and it is true and have preexist true indescribable painful pain ah what cruel life and shockful experiences and traumas and tortures and diseases but oppression and forgetfulness suppression and to escape from counted real problems in reality or earth but he did not think and as relaxant and life stimulant and wrongful pain reliever as believed those problems not exist and thereby

harmless and give mercy and feel like saved from additional tortures and that trick from god not only in this condition but all life as in islam religion angels open window to paradise and say god changed previous place to paradise and when that wrongful pain reliever as enemy maybe exploit that when spy and that relaxant and stimulant and pain reliever called stimming from pain and experiences and traumas and tortures and oppression and excitatory diseases such as anxiety and heart fast beat and high blood pressure and usual forgetfulness and inhibitory diseases such as fatigue and depression and malnutrition and distressful inhibition that like before sleep when human inhibition elevate he will sleep where we are from god mercy we describe all that

some youngers not have diseases or have hormones imbalance from just imitate other gender and that will raise hormones as when female imitated male and have voice and organs hair similar to them or from psychological diseases like dissociative diseases such as obsession uninterrupted initiated with effectors like staying with

females and playing with females toys and wrongful beliefs and knowledge not corrected with friending and loving and containing and understanding and extracting his feelings and conversate with him frankly and entertain him as supposed leastest secondary way even sex toys to suffice himself and not mistreat and crypt him and left him more far crypted from just you and all that like what strangers do and even some not sleep except on his romantic warm feelings ejector and affective lover voice so you need to be romantic lover that closer more than in drama without boarders and rare times in addition to obsession suppressants and for wrong beliefs forgetfulness inducers like antihistamines and those deeds hereinbefore and for more read youngers sexual stories and you will know secrets never heard and in addition to teach him and experiments like giving girls sex toys to practice and neuromodulators such as habits like martial arts and sciences and scientific religion and take him with you outside and hard works and natural drugs alternatives and male gender molecules and in continue after aforesaid hormones imbalance from psychological diseases like dissociative diseases such as obsession or autism or

forgetfulness or depression or anxiety or from diseases like birth defects from hormones drugs during pregnancy or liver diseases or adrenal diseases or infections all that can producing other gender molecules like hyperthyroidism and hyperprolactinemia and hypercortisolism and everything mentioned encourage live as other opposite gender and say affirmations they have other gender in their gender bodies and affirmations is neuromodulator and that encourage and not force as general rule in anything nothing similar to that can force someone to do anything

most appetite stimulants inhibitory molecules or inhibitory molecules release inducers as alcohol and cannabis and appetite suppressants excitatory molecules or excitatory molecules release inducers as belly contraction and appetite suppression prior to heart attack and as infections cause fever and appetite suppression and

sinful surveillance disease or lostness disease or earth accounters disease or earth divine humans accounters disease or earth humans forbidden account disease or

earth accounters delay disease or god waived accountability disease or god waived accountancy exploitation disease or god waived soul speech exploitation disease

draination no maintenance time

summarize syndrome

self fight

wasteful justify satan delay and consume both time and power and just only satan benefited

excessive proximity is sickness exceeded front cameras and microphones and people

subtype obsession

less worse summary every hour or hours or day or week or month without markers

create problems from nothing and claimed not bewitched or bewitched

greed syndrome

unjust innocence draination

artificial guiltiness inducer

endogenous netflix disease

mini mind inducer

soul charm suppressant

progression suppressant

attempt to be good suppressant

repeated remembrance to extremist thoughts to surround them every period like rules remembrance or stickiness to avoid any leak from happen by thoughts derivation to future but now future too in upcoming active thoughts and deeds as addition to accumulative beawareness from them and as politeness in the further treatment and sometimes just that strange thing urging unjust urgent agent to oppress when

he just not feel good or want stimulation or entertainment

every time there is something you and others do not know in that mind random space but except with questions and sometimes answers disappear not comes in same time and need days and that show him false guilty as that is avoided in courts prolonged procedures and that was to help him find his innocence and rare times not show due to factors and dead oppressed

when everything sabotaged the human tend to left everything sabotaged and that include uncorrected bad conversations

submit to sudden wrong thoughts is relaxant from prior ongoing think unsatisfied

avoidance and when human scared want to skip thought rapidly and unnaturally that cause enough stuck by escape from that thought in mind primary reason highway he will back to that stop again when he want live naturally not like other thoughts kicked slowly and during multiple steps and similar to machine learning need know every details to

avoid errors

rfsd

to dangerous level show false interests beliefs fears emotions guilt intentions decisions violations imprecations threats oppositions promises pitness weakness wishes desires goals needs insulations playfulness explanations expectations whispers inspirations knowledge forgetfulness

and someone know he placed himself in wrong random shared place to judge and he is not came rightfully and for goodness but evil purposes if he remember as who sinnly spy in that place and why that overact and spoken words and deeds are enough did he know that or not just want utilize power that will lead to problems often times and every overpower is overact and that overact overwrite everything and that include knowledge and facts and goals and will waste time and power and rightness as they will try to kill wrongfully based on spied mind false thoughts and god intervenes and who want wrongness miss lot rightness and who do that sinner as he will stupidly oppress upon

those unwanted words as he will encourage himself to oppress from them if he urgent or not urgent he will be extreme urgent forcibly no way to avoid like right now received markers from obsession unwanted from me but misinterpreted prematurely from him as often i do not spend unneeded effort for responses to wrongful delusions because that overact and for who and who asked and i terminate that conversation immediately and who hear first part from that exercpt he think i accepted that as i did not answered and that mind speech space is spirits world public place where angels and satans come and trap human stealthily and avoid lately often and appear guilty falsely to himself and who hear him or satans come naturally or sent from one and they say bad words in voice that is identical to human voice and he assume that is from himself and he is guilty and who hear satans words from his mind remotely he think those are from himself and he is guilty falsely or he know he is not guilty but innocent as he know those voices are from satans sent from him or comes naturally or satans trapped him stealthily to complete speech temporarily and that was evidence and that was sin act as brake as no one will not offend often and maybe

used as past life deeds teller and present intended actions prevention

when someone appear and act politely and confident not offend to bothers and cry suddenly and say he is good multiple times he is good as offenders resist in most places and most times

ah i want cry it is show innocent as guilty

when around extreme he will use extreme words in think like them as he want focus in same condition

sent satan whispers promote regenerative derivation in idle mode

most times that sinful power and called mind speech spy is wrongfully exploited after wizard and jinn and biased human narrow mind decided upon true human not fake human and he is innocent who did natural deeds such as response that is guiltless to their provocative traps whilst they should wait for true two parties not create them as that can turn whole people to guilty but not good and upon

natural simple help and that is not with bad intentions despite those they said this human soul is bad and corrupted to the united states of america and that is prolonged decision and not changeable whatever he do even if he cry years because he is innocent and not shown except goodness outrightly from before that oppression from childhood to believed death moments like forgiven them and pray to god for mercy upon them everything that disprove their claims and they see his innocence and truths ultimate reality but essentially when racist discriminated anyone without sin why not he will criminalize his most deeds and that is extra thing and from those will see things enlarged and of course this is usual but criminality always bring unexpected things as you bring them to criminals and that means when biased wizard decide permanently upon natural deeds from someone innocent and not shown except goodness outrightly that is wrong
if you treat someone as bad he will be bad and if you oppress someone he will oppress himself like you when you initiated thoughts he will be busy how you think and derive from them and forget his freedom and rights and dignity and deserved goodness and innocence and believe not

deserve honor and deserve humilation and just that busy with how you think oppress him and falsely and maliciously accuse himself like you like he support you and with you as kindness and that is show him false guilty and called yourself effect

and how many white youngers and olders workers and retirees dead from that sinful power used to judge upon mind thoughts not as supposed upon spoken words and deeds from healthy humans not diseased with any disease and that include distress and anxiety and depression and traumas and post traumatic stress and forgetfulness and obsession and heart palpitations and infections and not intoxicated and not trapped and not bewitched and outright hostiliter to all of you and there were souls more innocent than me and pure and tamable and beneficial and it is not impossible to find mistakes and fortunately most of them in prison and stalked see them and you should be merciful and give another chance and if you do not forgive god forgive

even banned from official job with termination and license

cancelation or from unauthorized practice with warning to stop and ban from that job licensure letter or prosecution and will stay away from that job and if protested he can be suppressed with official warning that everything for country interest no one can refuse or request explanation and they will become silenced naturally and that enough and every state not obligated to justify in such thing and knew what right for country remaintance and loaded duty to provide paradise life for everyone and have absolute power and that not defended from agencies and they should feel that prolonged interest power that silence everything as they are god successors and the country exist before everything and god messenger said to people hear and obey to prince even if he beat your back and take your money you should hear and obey as he know interest and everyone should be pleased by default naturally as this is god judgment and see saudi arabia country everyone pleased and why not they utilize that country interest power and he will be quite
so judge (you O Muhammad SAW) between them by what Allah has revealed and follow not their vain desires, but beware of them lest they turn

And if you obey most of those on earth, they will mislead you far away from Allah's Path. They follow nothing but conjectures, and they do nothing but lie.

when someone sent satans whisper bad things to him that can promote regenerative derivation when they leave but cleansed often

sometimes human use mind think with initial powerful stimulatory slider that swipe unwanted bad words to choose correct word and that called stimulatory and proximity way

average human when tired or not want overact he will let obsession from satan appear unlocked in his mind whatever it was and he is not pleased but shocked and angry and paralyzed suffers from them as that change his mood and weather and condition during tiredness often or talk them and do you know other human sufferance

often human use guess think mode that show every word even bad words and need every period to remember all extreme bad words and its details and conversations to

stay knowledged and to avoid lessons forgetfulness as general remembrance for life experiences and those estimated twenty years to avoid shocks and lures and wonder and mind blow and leak and trap for all matter similarities in anywhere and with any people and to avoid another distressful teach again and that was self teaching to stay kind and prevent any leak and not means extreme words will not show in his mind

suggestions bar all things without exception should show in mind like swipe selection bar to speak and act

neutralize innocence and spontaneity and pure feelings and human being fitrah and childhood habits

stimulant thoughts act as antidepression and depressant wrongful thoughts like alcohol act as tranquilizer such bad words on god and satiety inducer unreal hazard thoughts act as euphoria inducer and pitness mask and dissociative thoughts like in my silent childhood i was in other world and its conversations and wishes and thoughts dissociated from reality

targeted bewitched individuals deeds bewitch and satans obsession receive free subscription like ad free subscription

when someone in oppression false accusations condition he will see thoughts suggestions similar to true guilty but he is innocent and will not accept them

when used with markers like words criminalize and bothers and hint you should not have any bad mind speech to stay in this country and everything supervised voluntary deportation

when human know attackers accusations and spiers terrorism about things they bring the mind uncontrolled obsession attention to similar mentioned things and what they hate and that is in mind uncontrolled speech known as bad obsession about what bad things to avoid and that is need listen to complete bad speech details as refresh to avoid and as addition to ongoing beaware from them and that is accumulative and this process is repetitive when oppressed human in ongoing dangerous situations

we should be brave and leave mind speech whatever it was and not spend effort uneeded and overact and not be fake and not betray ourselves and not lie upon ourselves from after we knew ultimate reality and not give any destructive courtesy to anyone whatever it was and not communicate about that forbidden spy with terrorists and that guidance is in according with their rule there is no communication with terrorists and we are not pleased about their play and we are conscious and not take drugs and say nothing shall ever happen to us except what allah has ordained for us he is our maula and lord and helper and protector and in allah let the believers put their trust and if god created life like that we do not want it and we are questionable upon his hearable speak and write and deeds when they are evil outrightly when not diseased with anxiety and obsession and dissociation and not bewitched check twice because this is masker and not intoxicated with poisons and not mistreated and not forced to make desired response such like speech and deeds from trap whilst they should wait for true two parties not create them as that can turn whole people to guilty but not good

the human have freedom to extract his anger in mind uncontrolled speech that is called obsession and even extreme bad words on god as most true muslims who uplifted to highest faith level have extreme bad words untellable and disbelief and still honored muslims to god and angels and god still love them and kind and smile to them even if some people do not know and he will let them enter paradise easily and muslims come to god messenger mohammed and said verily we perceive in our minds that which every one of us considers it too grave to express he the holy prophet said do you really perceive it they said yes upon this he remarked that is the faith manifest and that is example apply upon muslims and nonmuslims and he said god waived soul speech and that is with obsession for my nation if they not speak or do thing because god know what human not know about his intentionally designed distressful mind uncontrolled fully speech that is called obsession and spirits world public place where spirit creatures meet and human soul trapped from satans sometimes and human is like two creatures one in earth speak and act good and his soul in that world and that is soul speech waiver not only for muslims because when god

waived muslims for that he will waive that for others but god messenger he not want forget invite to islam religion and that is preach with goodness and encouragement to become muslims and everything is guide about that mind speech is mislead from god most times for who spy and human mind speech is waived completely from creator but human is questionable upon his hearable speak and write and deeds when they are evil outrightly when not diseased with anxiety and obsession and dissociation and not bewitched check twice because this is masker and not intoxicated with poisons and not mistreated and not forced to make desired response such like speech and deeds from trap whilst they should wait for true two parties not create them as that can turn whole people to guilty but not good

when oppressors accuse and bother innocent with white people hate falsely they bring fake discrimination on them in mind uncontrolled obsession because oppressors from them and they oppress for themselves and others and will perceive them ah how those white people and not perceive them government and i am not oppressor and not ignorant and not hater but other than me human unrelieved will be as

when you treat anyone as bad will be bad and that is called yourself effect

measure

sometimes human conditionally suffice with unexact words such not benefit me but similar in extreme far meaning to correct words such not my business as shortcut to feel good because everything lead to same feeling and that is what human need in his silent mind as main goal in mind is feeling and that is similar to when human do everything during sex hour and that is positive and smartness and masculinity to reach goal regardless conditional definite temporary methods but not believe wrong things such like affirmations and return to same before and more best and to human fitrah in speech and deeds and that is inspire that human benefit from everything as creator want and there is not sin except forcible offend with speech and deeds and indeed god forgives all sins with repentance request words and the repented from sin as who not had sin and like new born not had sins and have only hasanat like new born and known as good deeds indeed good deeds erase bad deeds

and that is called hasanat therapy

mind world is another world totally and very different than earth world and sometimes there deep learn refresh about minor things as maintenance and that is inspire sometimes human enter deep learn condition to satiate active thoughts knowledge to speak and act

sometimes human fear from everything even from his family to charge his bravery

when you oppress and break and disable and cause diseases to someone you are weaken his strength and seriousness to kick obsession as to stay good need some effort and as strength and seriousness and bravery needed to kick obsession and if not have bravery will get obsession and if not defended himself from you how he defend himself from obsession

when human escape from extreme bad thoughts not from himself but jinn satans and known as obsession because he think spier hate them and he do not want them bother who spy even for moments and not given permission to

handle those bad thoughts as it is supposed naturally and that is need usual nature multiple steps such as exploration and evaluation and determination to take lessons and to avoid bad parts and sometimes need many supportive transient feelings suchlike wonder trial and euphoria trial and pseudo aggression trial and fear trial and ignorance trial to increase thoughts feeling and to know what feeling suitable to those thoughts for next time until pass to suitable feeling all those things when forbidden cause hardship similar to suffer from unknown mystery box and they will back multiple times and the human will have leakages from those unclosed thoughts as not realized yet what those bad thoughts fact and as not given complete natural deny and those are show badness falsely to himself

healthy memory is distinct from diseased memory when the human are healthy and not have diseases and with include obsession and not mistreated and not poisoned and not bewitched and not distressed and not oppressed and have healthy memory it is controlled and firm and quite most times and when the human are not healthy and have unhealthy memory it is uncontrolled and flood extreme bad

thoughts and when the human are tired from try to repair and unsatisfied from the destruction progress exceeded the repair ability and it is madness and did someone know about obsession is from forgetfulness diseases in most times as the human will learn the usual beneficial ways and techniques and defense and good character and behaviors and morals again and that reasoning from scratch is take time and have mistakes and how many times from the forgetfulness diseases repeated effects everyday and sudden attacks like absence seizures and what if the forgetfulness diseases destruction progress exceed the repair ability

sometimes the human love his expected good assumptions from others about himself as spontaneous natural sense to natural response from the people even if the thoughts were illusions as the kind human deserve more than them and the smart human benefit from everything and from those good thoughts feelings even if they were illusions the human take the feelings nothing else and if deny them that is overact in most times and leave the people who taunt the human not know about the goodness suchlike tranquility for

the human thereafter

you see how many problems they bring them oppressors we are in other world false and other people in earth world and you judge upon unreliable place and that is overact and lead to unexpected problems and contradiction like accuse innocent falsely how that is noisy and the human will not accept

some synthetic gaba agonists cause transient mild forgetfulness as gabapentin and lipids or inhibitory molecules as agmatine

sabotager disease is subtype from obsession and when someone sabotage everything and that include but not limited to rights and knowledge and world matters and science and inventions and religion and god words and laws and seriousness and masculinity and productivity and creativity and advices and speech and quietness with laugh and taunt and argue and stupidness and disappreciate and other wrongful and inappropriate and frivolous and building

demolition activities and as most times excessive laugh sabotagation and most people have excitatory diseases like dissociatives diseases like delirium or psychosis like from toxins like ongoing stealth infections

childhood remembrance inducers watch youngers content and listen songs and read stories and stay with them as elder not stay except with youths to remember youth days

all inhibitory molecules are strongly work as tranquilizers and antipsychotics and antiseizures and depressants and antianxiety and mood stabilizers

most excitatory neurotransmitters blockers are broad spectrum not just block selected neurotransmitter but others too like inhibitory molecules like glutamate blockers work as beta blockers and beta blockers work as glutamate blockers and means inhibitory molecules like excitatory neurotransmitters blockers like glutamate blockers are alternative indirect beta blockers and sodium channels

blockers and calcium channels blockers and opioids are almost nonselective excitatory molecules blockers like indirect glutamate blockers and indirect beta blockers and indirect sodium channels blockers and calcium channels blockers and others

someone take theanine in morning and slept voluntarily easily in hours for hours and wake and slept again for hours and have clear dreams and helped memory remembrance like before years youth days before get country vaccines to travel to country and their infections and poisons and also helped excitatory diseases like muscles stiffness or agitation and high blood pressure as theanine inhibitory molecule glutamate blocker and relaxant

someone take cannabis dried flower unheated little part and inhibited somewhat and later have forgetfulness and excitatory diseases like agitation and anxiety more than before like some inhibitory drugs addiction augmentation diseases as some hurt their selves and as accelerated restless legs after some antipsychotics before and means

cannabis not desired long term inhibitory for most diseased people and have paradoxical effects or augmentation and also means when cannabis suitable for some healthy people it is utilize and increase inhibitory molecules production but in diseased people and means most inhibitory drugs and sophisticated substances like most psychoactives like dissociatives and depressants like cannabis are toxins strongly deplete liver molecules like fluids secretion factors molecules like neutralizers molecules like inhibitory molecules and cause liver toxicity or excitotoxicity like acetaminophen toxicity and as opioids agonists deplete opioid receptors activation supposed or requested effect yield end direct factors

decisions same zakah and sadakah

excitatory molecules toxicity like adrenergics decisions enemy

drink alcohol affect liver cells and similar to excitotoxicity

and hepatotoxicity and cause body to release more fluids secretion factors molecules such inhibitory molecules like serotonin to clean and that cause intoxication and similar to other unusual irritants as someone with infections caused sepsis have dissociation and vasodialation and both from inhibitory molecules release to clean and in addition to hyperthermia and that means injury from accidents or torture cause local cells toxicity similar to liver cells toxicity from alcohol and have dissociation from reality and more boosted with bleed during moments and that relieve pain and in addition to unconsciousness most times and that was hidden bless from god and most people entertain from that if they want like masochists as god said i know what you do not know to angels before created humans when they said will you place therein who will make mischief and go ask who have injury and most people dead intoxicated in less than minute and someone his name ali almuntaser went back to life after four rounds from execution and he said not felt anything and slept easily as he was quite not overwhelm and they posted his records in internet and we know that he is disappointed as not separate him from paradise except death and he is now have shit life about to

cry every hours and that was evidence to when god said in resurrection day you see people drunken and not like chronic unhealed ulcers in diabetes people as that excitatory disease and have inhibitory molecules deficiency and circulation diseases

most times depression from obsession and who not get depression from obsession and most times obsession from excitatory diseases like anxiety and sometimes depression from anxiety alone without obsession and most times who not get depression from anxiety and excitatory diseases or called body organs physical excitatory diseases like anxiety not means will not have depression or fatigue but agitated body are not relax have pseudo immobilization sometimes and that cause distress and will prevent motivation to act or excitatory diseases over time will drain body energy and cause fatigue and depression and both similar to people who have diabetes and high blood pressure and that is mistaken as depression and means anxiety and obsession and some depression treated with inhibitory molecules as they treated major depression with inhibitory molecules like

relaxants like gaba agonists and glutamate blockers and antipsychotics and means most times major depression is anxiety and means most times fatigue not different than depression or both comes together

endogenous television screen during imagination and remembrance and closed eyes in darken area during sleep and called dreams and before returning to interrupted sleep and dissociation from reality to other world from inhibitory molecules and they are for forgetfulness or memory and means inhibitory molecules is electricity supply to slowly turn that screen during closed eyes in darkness or opened eyes powerfully and means imagination not seen in brain but in eyes and not sensed except during closed eyes and means people who have dissociative diseases when they hear auditory sounds and see different things like being in third dimension similar to dreamy sleeping human but half sleeper and from inhibitory molecules elevation and as most dissociatives like psychedelics are serotonin agonists and depressants like alcohol and cannabis and means some times no people who have excitatory diseases or

excitatory molecules toxicity are pleased to become painters as they have imagination uneasiness and they do not want

cannabis decarboxylated in heat have thc and that heated cannabis primarily stimulant in areas and secondarily dissociative and thirdarily depressant in areas and most edibles cannabis food similar to that heated cannabis have thc and some diseased people will get seizures as heated cannabis stimulant and the safe unheated cannabis flower primarily depressant and secondarily negligible dissociative and help seizures

calcium channels blockers related and similar structural scaffolds or analogues or identical molecules
cytochrome p450 2d6 substrates
cytochrome p450 2d6 processed molecules
alkaloids
phenolics
phenols
quinones

glycosides
flavonoids
lignans
fatty acids

they said natural calcium channels blockers according to the structural scaffolds and mechanism of actions we classified the relevant natural products against arrhythmia into several categories including alkaloids quinones glycosides flavonoids phenols lignans and fatty acids

excitatory diseases symptom joints pain

most excitatory diseases from toxins deposits or excitatory diseases cause toxins deposit like alzheimer have amyloid and synuclein deposits

sometimes before tumor psychological diseases forgetfulness and not relaxed body but excitatory diseases like from fluids secretion factors deficiency like selective

muscles contraction molecules like acetylcholine and oxytocin and inhibitory molecules like gaba and glycine and histamine deficiency and glutamate toxicity

some disability like tumor cells not damaged enough to repair

sodium channels blockers rash like allergy and means allergy people have sodium channels inhibited and potassium channels accelerated

noise like songs and electromagnetic radiation like networks during sleep prevent repair as body busy with process signals and means sleep room or sleep cube should isolated

food usual used toxins
silicon dioxide
monosodium glutamate

khat common used poisons

agitation cause

selective serotonin receptors selective excitatory like cause restless legs and as monoamines in addition to noradrenaline and dopamine

herbs foreign fda approved like ht042 for height

sjogren syndrome autoimmune disease cause dry organs and similar to rheumatoid arthritis and means most autoimmune diseases cause dry organs and lead to cancer like lymphoma and means rheumatic heart disease from fluids secretion factors deficiency and also means fluids secretion factors deficiency can cause sjogren syndrome and rheumatoid arthritis as dry organs cause inflammation and lead to tumor and as rheumatoid arthritis treated with

capsaicin topical

phosphorus are excitatory and means most times high calcium from prolonged phosphorus absence as not elevated for utilize often from inhibition from inhibitory diseases like fatigue like from toxins like chemicals or infections or if calcium are excitatory high calcium shifted or boosted like calcium channels controlled by receptors positive allosteric modulated more than phosphorus from excitatory diseases like stealth excitation like from liver disease like from toxins like chemicals or infections

psychological diseases like depression or excitation often want molecules cross blood brain barrier

you need to be slow in central nervous system and other things slow to learn like in childhood and when the things like rap fast and you slow you will not learn and if the speech slow and you fast you will not learn and if the speech balanced and you slow you will learn and students

use inhibitory molecules like beta blockers and depressants

brief heart pain after hours from showers or vitamin c sign heart failure or neutralizers insufficiency like glutathione and cholesterol and estrogen and like alcohol flushes both from liver disease

zinc deficiency symptoms bad breath and organs like stomach and mouth mucus layer inflammation and means for fluids secretion factors molecules

most times people who have anxiety not have depression and people who have depression not have anxiety and as inhibitory molecules like depressants for anxiety

lung symptoms before brain diseases like forgetfulness as lung surfactant similar to brain cells and liver cells

acetylcholine deficiency and methylation deficiency

symptoms hearable heart beats in ear as someone take choline bitartrate and not hear heart beats and means acetylcholine deficiency from liver disease not indefinitely produce and store conditional essential molecules like protein amino acids like methionine to produce choline and glycogen to have ptms molecules like acetylation like acetyl coenzyme a and methylation like sam e or from blocked acetylcholine receptors and from ptms molecules like methylation deficiency as he take sam e before time and not hear heart beats and all that most times from toxins like ongoing stealth infections

rare times when the body inhibited not means the human will be inhibited but excited as the human agitated from restless legs his body chemistry have selective inhibitory molecules toxicity and as the human agitated during dream from selective inhibition and not agitate during awake and as some people excited like psychosis from selective inhibition as people who take some serotonin agonists have hallucinations

acetylcholine deficiency symptoms diarrhea absence and vomiting absence and sweating absence and muscles contraction weakness and sometimes in addition to histamine deficiency

someone take delivered choline bitartrate with silicon dioxide and suspected poisons from the united states of america government and inhibited and slept early and have forgetfulness and means tartaric acid destroy choline effect and complicate preexist forgetfulness like unfriendly acids during disease like acetic acid and ascorbic acid and not like hydrochloric acid or citric acid or orotic acid and as sunflower lecithin not flooded softgels but pure powder improve memory soon and more with citric acid like from tomatos or choline bitartrate over time from intakes will resolve like sometimes sugars cause initial forgetfulness but after multiple times improve memory and also means silicon dioxide cause potential forgetfulness and also means memory molecules like acetylcholine without factors like liver molecules like energy molecules and neutralizers molecules like protein and lipids and like

essentials synthesis molecules like ptms molecules

not every inhibition for memory as parkinson disease people almost immobilized and have restless legs from selective inhibitory molecules toxicity and as people take antipsychotics soon have forgetfulness for months

before cancer psychological diseases like forgetfulness and can cause hallucinations both like from acetylcholine deficiency and cause calcium elevation

parasympathetic nervous system activation have acetylcholine receptors activation always and acetylcholine receptors activation have parasympathetic nervous system activation always or acetylcholine receptors activation not always have parasympathetic nervous system activation

someone take choline bitartrate gram and felt transient hypothermia and after that warmness like from parasympathetic nervous system activation or

acetylcholine receptors activation by stored acetylcholine or ingested choline or tartaric acid like hypochlorous acid and have inhibition and breath easiness and slept early and means body coldness from acetylcholine deficiency or selective acids deficiency and breath easiness from acetylcholine receptors activation and as they said acetylcholine precursor like dimethylaminoethanol related to amphetamine derivative dimethylamylamine and some people use acetylcholine agonists as adulterants and they use some cough suppressants to make that and means breath molecules like acetylcholine and ptms molecules like methylation molecules and other stimulants like theobromine safe alternative

when calcium elevated from acetylcholine deficiency as acetylcholine utilize calcium by open calcium channels and same to other minerals and ionic channels and their openers from receptors

they said calcium prevent cancer as calcium positive allosteric modulator for fluids secretion factor acetylcholine

and direct actor of acetylcholine receptors activation

someone after recent atypical antipsychotics not have potential akathisia yet and most times will not have but chew little part typical cannabis green dried from street and felt active more for moments like from parasympathetic nervous system activation or acetylcholine release and soon after have prolonged akathisia for months from like increased inhibition more than antipsychotics alone and such selective inhibitory molecules toxicity and increased cognitive and past remembrance and means cannabis inhibitory like antipsychotics and as they said cannabis lowered high blood pressure like beta blockers and vasodilators

restless legs syndrome from low acetylcholine as it is ignite to elevate and that cause restless legs and acetylcholine blockers sometimes help as block try totally as electric stimulation used for restless legs as electric stimulation release acetylcholine and as curcumin acetylcholine positive allosteric modulator relieve restless

people who have allergy anaphylaxis from fluids secretion factors molecules deficiency like muscles contraction molecules like acetylcholine deficiency and fluids neutralizers molecules like bicarbonate as when there is acetylcholine deficiency the body will substitute with similar other fluids secretion molecules like histamine and as luteolin acetylcholine agonist mast cell stabilizer

depression have inverse relationship with desires like sex

minors urinate during sleep from fluids secretion molecules like muscles contraction molecules elevation or deficiency like acetylcholine and muscles molecules like energy molecules like malnutrition molecules like protein deficiency and sugars deficiency and vitamins like vitamin d and minerals like zinc deficiency and liquid lipids deficiency and colon diseases like stealth infections or probiotics deficiency and also comes with hypothermia like from parasympathetic nervous system activation absence like

from acetylcholine deficiency or from anxiety with worry and mistreatment around and also with constipation and dumbiness from forgetfulness

any protein deficiency like transferrin or dopamine from protein intake deficiency or biomolecules synthesis factors molecules like ptms molecules from malnutrition

forgetfulness in diseased people like diabetes and liver disease and infections after eat from fluids factors molecules like acetylcholine deficiency as sex

where the meat disappeared from teeth when food like meat and bread left inside teeth the hydrolytic enzymes will breakdown food and the food disappear and means not worry when left food

who have infections and take antipsychotics for short time he will not have restless legs syndrome as most infections excitatory counteract selective inhibitory molecules toxicity

and work like iron and b6 and dopamine and why beta blockers work as adrenaline fuel for usual restless legs syndrome from selective inhibitory molecules toxicity and rare times from excitatory molecules toxicity and beta blockers for both and as restless arms treated with gaba agonists and when there are pain from excitatory molecules toxicity always as treated with gaba agonists

head pseudo hypoxia disease or head decompression hypoxia disease or head muscles oxygen outage decompression contraction disease or head muscles decompressivative oxygen lackage disease or head muscles excessive oxygen decompression disease or condition is when someone say he lose thoughts match during soul corrupted speech deny check if he did not breath yet and that it is was the secret as he was not in his ability yet and he fight and naturally unpleased as he did not received involuntarily the soul corrupted speech as supposed like enough head muscles oxygen and active and relaxed and tranquil and unbusy and healthy and you killed every soul corrupted speech and calamities and all problems and all troubles and all matters before in the past

and the evidence they are not exist and disappeared from your life as you see now clear mind does these remains you stupid so relax live firm static and these things are past solved and think about other things and god

forgetfulness cause chronic fatigue and immobilization disability and pseudo locked in syndrome as the human forget what to do he will stay in place

poet have poem depression and poem obsession and they use expression therapies like write therapy and when they not express they will being distressed for hours and when they express will be called natural transient depression and transient obsession and same to other writers and means if anyone have depression and obsession he need to express like expression therapies like talk therapies like talk to anyone or god or write therapy or record therapy or like listen songs therapy or mood desired watch videos therapy like watch sad videos as most depression people need to express their sad feelings not quit to end hardship and depression not tranquility or like smash therapy and most

religions based on expression like pray to god and in the future we will name chicken to chicken therapy to convince forgetful people to take real cure forgotten

cry with tears deplete acetylcholine

cry with tear absence from sweat molecules like fluids like stomach acid and ejaculation secretion factors molecules like muscles contraction molecules like acetylcholine and like histamine and gastrin and neutralizers molecules deficiency and inhibitory molecules like oxytocin or gaba or endorphins or opioids or glycine deficiency as cry with tears deplete them and in addition to constipation and defecting difficult and enlarged and dark and dry stool and untranquility and hypothermia and from like toxins like ongoing stealth infections

coldness heater therapy instruction manual how to make heater from household appliances first put yellow lamp in room rooftop and turn on and it is work gradually and cover

yourself with blanket and you will not be cold and if your coldness lamp resistant take stronger lamp or you need to buy vehicle and turn lights toward room or move to another warm country or wait to summer time or wait for sunshine tomorrow or warm shower is not recommended at this time as it is cause reaction and you sweetheart appear to have allergy or you need to take new stronger branded technological smartest wireless bluetooth hifi scifi netflix doctor odyssey next generation state of the art blanket ohhh that is terrible that is what they say not just buy heater and in continue they want talk pharmaceutical grade fda approved and blanket prescription and blanket license if applicable see state vs blanket and as the people say everything is by intent if you intent to kick your coldness from lamp turn you will not have coldness and that is what they really do yeah yes exactly thank you colleagues thank you guys and researchers and scientists and university of deep earth or useless or psychedelics or fourth dimension or dissociation or pseudo science or deception or falsification or pluto or bank or bankruptcy or credit lines or company for the clinical trials and it is effective said hettno u jerkson md and similar to psychiatrist sue sue if you can

and parkinson park in bed son and md anderson under poison son and akathisia aka this is him and filter secret algorithm technique wisdom rule whatever they say or whatever they scare someone from something or assure someone from something and put little bit minerals in supplements do the opposite exactly and these are progressive true rule between natural medicine people and as we and more than fifty hundreds human others did not followed chlorine dioxide wrongful knowledge and we cured and we followed uridine restorative effect take insight and most people with forgetfulness get excitatory diseases liver pain attacks and agitation and high blood pressure and insomnia and sleep interruption and absence seizures and more forgetfulness how they crafted that study we do not know they are evils

another warning everywhere please not take the miracle mineral supplement also known as chlorine dioxide solution or mms1 or the universal antidote and mms2 appear on www.mmstestimonials.co and sold on www.safrax.com and the algorithm and wisdom rule say do the opposite
6:28 pm january 24 2026

if you learned the obsession human how he express about himself like with expression therapies like talk therapy like record therapy or write therapy or like break therapy as expression always lead to know himself or not express about himself totally and like high temperature treatment or cool temperature treatment not between

head vacuum contraction signs finger point toward eye focus not do contraction or little contraction as the head muscles contraction preexist and that happen after slow breathes out immediated with complete relaxation range from belly and hands and shoulders and feets until rest organs feel them every time miss some and also conditional head muscles vacuum contraction voluntarily and can be sometimes from just previous two things when someone live natural and also immediated follow with breath in deep and with conditional nose inhale quick multiple times and exhale when needed and immediated with mind supposed take or hold or own or focus cause involuntary or voluntary easiest and effortless head muscles vacuum contraction from forehead toward backhead seen inside mind and also the first thing slow breathes out and second thing complete relaxation both alone and also the fourth thing inhalation deep successful with cough and the fifth thing nose inhalation rapid multiple times both or either help or cause voluntary or involuntary easiest and effortless head muscles vacuum contraction and also that happen in khushoo or cry or sadness or tranquil valued loved deep think

people do not do voluntary obsession also known as build transient obsession voluntarily like want some inhibitory unresolved problems pseudo entertainful generation and not to solve them as supposed like with not generate them rootedly or ignorance or firmly or seriously or rightfully or naturally but to solve them or discuss or philosophize or express or enlarge or worship or stay with them have fun and fictional world like talking to silent lover as his dream and playfully and delusionally they do not do except they want relaxants as obsession is general muscle relaxant and they just want stimulants greedily not want just natural relax as they used since years not know the natural inhibition and relaxation and tranquility goodness and all combined like in khushoo and other slow therapy and mediation and as obsession stimulant and also creative fictional similar to psychedelics third dimension inducer like watch netflix or television and youtube and this positive obsession not called obsession but soul good speech or imagination and the negative obsession is subtype of soul speech and called soul corrupted speech and in continue

after they want relaxants as their head muscles partial vacuum contraction or the rare head muscles vacuum contraction unloaded and can cause distress and they are tired from prolonged seriousness for nothing and even no khushoo munajah or deservable remembrance or get busy or thrive with something else and appear overact or overpower

relaxants also known as general relaxants like voluntary obsession and tranquilizers like antipsychotics and muscles relaxants like acetylcholine blockers all same thing and abbreviated relaxants

mood stabilizer from excitation

khushoo same xanax and other inhibitory molecules like alcohol as it is lead to similar tranquility and no physical difference

obsession internal psychosis and psychosis expressional

obsession and both treated same

any receptor bind molecule or receptor ligand or neurotransmitter molecule not neurotransmitter receptor and like dopamine molecule or opioid molecule is just turn on mode switch like treadmill safety key and when bind to opioid receptor turn on receptor and the receptor cause inhibition effect by its pathways or ways or mechanism of actions or called receptor activation effect yield factors like direct inhibitory molecules like sleep molecules like adenosine and sleep hormone and like what during sleep utilized molecules like homeostasis molecules like repair or synthesis or detoxification molecules like liver molecules like neutralizers molecules like glutathione and like inhibitory steroids like estrogen and progesterone and like selective energy molecules and like parasympathetic nervous system molecules like acetylcholine and like inhibitory minerals like lithium and like agmatine and selective ionic channels blockers and t3 and means inhibitory just turn on switch receptor synthetic agonists like synthetic opioids agonists deplete those opioid

receptors activation supposed or requested effect yield end direct factors and after chronic use effects decline or pause will cause addiction diseases like excitatory withdrawal disease

akathisia or restless legs syndrome inducers like selective inhibitory molecules like lithium like atypical antipsychotics and as lithium used for excitatory diseases like neuropsychiatric diseases like schizophrenia

sudden jerks voluntary

liver disease symptoms wake up multiple times in sleep and insomnia and forgetfulness and agitation and excitatory molecules ratio more to inhibitory molecules and like from toxins like ongoing stealth infections

acetylcholine deficiency symptoms those who have breath difficult or not reach successful complete expected inhalation also will have muscles weakness and heart heaviness distressing or precursory heart weak failure sometimes and repetitive forgetfulness from muscles contraction molecules like acetylcholine and oxytocin deficiency like from toxins like ongoing stealth infections as muscles relaxants like acetylcholine blockers like chemicals

or corona virus cause lung muscles immobilization and nicotine treated corona virus and that is why most people are dead they were have lowest acetylcholine and oxytocin and excitatory molecules like dopamine and adrenaline and glutamate

heart heaviness distressing after calamities from contraction deficiency like from excitatory dual inhibitory molecules like acetylcholine and oxytocin deficiency as the heart try to stay or stabilize and reach more contract as supposed for calamities and that cause heart heaviness painful appear like tightness but tightness from contraction and both similar and distress or painful heart as happen before wake up complete most times and dissappear after complete wake up as excitatory molecules lower than inhibitory molecules after sleep and need time to rise and precursory to heart weak failure or from other inhibitory molecules deficiency and selective excitatory molecules toxicity and some patients have broken heart syndrome and ptsd

islam therapy is become muslim easily with pronounce shahada and pray the five prayers everyday easier than eating three meals as we did today five prayers like other two billions muslims and we eat two meals as we are thrive with the easier things like prayers and god remembrance continuous and listen quran and nasheeds and by god solve all calamities or errors or corruptions or solve everything and recommended occasional know special knowledge or islamic sciences like qadar and death and who is god and who is the god messenger muhammed and what his merits and other sciences the god will guide you to what benefits you we promise you like not anyone promised before as it is miracle you feel like you deal with someone good and merciful but you do not see him but his things move around you and that is what we love to feel like we have superpowers and the others not have because they did not became true muslims muminun or new muslims and they are only in name muslims or not muslims and optional read quran or favored listen to inhibitory quran or nasheeds and that is it islam therapy or islam the goodness era pay or islam system or islam part or islam addon or islam knowledge or islam religion and it is change your life and

the only one nonselective work in your life and afterlife means it is covered everything did you see thing like that no even it is will give wealth and health and residence and children and luck and other goodness anything in your mind directed from god fair land and oftforgiving lord it is the only thing we use in my life and we do not see it therapy but survival

excited writers or judges or doctors or problems resolvers or decisions makers or officers or attorneys or students get ease from overexcitation or sudden forgetfulness or mood diseases or phobias or reflexes or anxiety molecules like sudden high blood pressure prevention or sudden fast heart rate prevention molecules like inhibitory molecules like mood stabilizers like excitatory molecules toxicity antidotes like decisions molecules like adrenergic blockers like beta blockers or glutamate blockers or calcium channels blockers or sodium channels blockers and other mood stabilizers or forgetfulness or cognitive molecules like acetylcholine precursors like choline chloride and acetyl coenzyme a and nitric oxide factors or sunflower lecithin or

cholinesterases inhibitors like inhibitory molecules or lithium and islam therapy and no prolonged soical media and other inhibitory molecules like gaba like agonists or natural increasers and seizures prevention molecules like lipids like liquid lipids and steroids inhibitory molecules like estrogen balance or progesterone balance or cholesterol balance like acetyl coenzyme a and thyroid inhibitory molecules like t3 balance like iodine and some have excitatory diseases like from toxins like ongoing stealth infections disease cause excitatory molecules toxicity diseases like high blood pressure and sleep interrupt diseases and forgetfulness and inhibitory molecules deficiency and liver diseases and colon diseases and treated with chlorine dioxide or with hypochlorous acid and during that rare times beta blockers or glutamate blockers to prevent transient excitation or liver molecules like neutralizers molecules like inhibitory molecules like nac and lecithin and liquid lipids like fish oil and retinoids and milk protein and honey and methylation donors and acetyl coenzyme a and other conditional essential molecules

brain atrophy like parkinson not happen before muscles atrophy as those who build muscles or train not get brain diseases and means brain cells and head muscles same muscles as protein and muscles contraction molecules like acetylcholine for brain

temporarily or permanently defective neurotransmitters like from antipsychotics or chemicals mimic neurotransmitters produce abnormal growth factor protein responsible for breast growth circulating in blood causing breast cancer and chlorine dioxide detoxifying neurotransmitters or their mimickers and eliminating that protein as chlorine dioxide stopped metastasis and reducing tumor

allergy people have mineral like lithium toxicity as it is gsk 3 beta inhibitor block glycogenesis factors and anaphylaxis reversed with glycogenesis inducers and glycogenolysis inducers like adrenaline and glucagon and means they have inhibited glycogenesis factors like glycogenesis inducers like gsk 3 beta inhibition glucagon deficiency and adrenaline deficiency and even anaphylaxis itself appear

like energy power shortage

mood stabilizers inhibitory

restless legs syndrome can be from selective inhibitory molecules toxicity like selective serotonin receptors or glycine as when someone take glycine have transient mild restless legs and as they said lithium inhibitory caused akathisia and as dopamine excitatory counteract inhibitory molecules and means dopamine agonist over time deplete factors like energy molecules and excitatory molecules for excitation and neutralizers molecules and not work and selective inhibition induce paradoxical restless legs augmentation especially in malnutritioned elders and also means most helpers like iron and b6 and small dose caffeine and nicotine are excitatory molecules and most wosers are inhibitory molecules

disease diagnose syndrome is when someone believe he have disease like obsession disease and say to others you

have same my disease and it is untrue

two types negative or destructive obsession and creative obsession and it is not called obsession but soul good speech

gas or stool odorless most times from liver disease not produce enough neutralizers molecules like glucose like for systematic blood use or belly fluids like bile acids to generate fermentation gases by microbiota or not produce conditional essential amino acids or from inhibitory molecules deficiency like protein or gaba

repetitive fear and shyness and obsession and forget and ignorance or dumbiness and pseudo dissociation and pseudo partial locked in disease abbreviated rfsofidld or rfsd is subtype from forgetfulness disease or subtype from forgetfulness subtype obsession disease as most times obsession from forgetfulness and as immunological memory cells like or immunizations like or visions or

experiences or exercises or knowledges forgotten and obsession from forgetfulness and forgetfulness can be from obsession and called forgetful obsession or obsession forgetfulness and pseudo locked in syndrome like when they stay lost in their bed and pseudo dissociation like when they remember thought and catch little parts and write them unorganized or unreasonable and they do not detect them and keep them and also inappropriate perfection intent just come in forgetfulness not healthy so it is so unjust and the badness things fall together and gone together and back to reality inducers like do reality activities like socialize and anger and scream and talk to someone and overspeak and oversing and religion and like other expression therapies like smash therapy and like exercise like sex or martial arts and showers and cooking help and it is easy to me to create disease names like others diagnose known diseases so we are both very relaxed and everyone do his job but the secret everyone walk in selected way with same abilities or time or work or effort no difference but the way do not remember and you are rootedly love and want and will still do walk but if you chosen to start by drop yourself and walk in the desert way

you will start do the desert way activities like me right now i chosen google keep as words place before time and today i reached higher level and it is helpful and it is was good choice to choose this way walk start and short time you will grow and arrive to the similar desert way useless right but you should choose firmly and deeply and truly and honestly and exactly and rightfully and childishly and calmly and pleasantly and tranquily your seen blessed soul way and you will be like him and if you be with one engineer you will be the second engineer and if you be with one idiot you will be the second idiot and if you be with one inventor you will be the second inventor and you will say and insight and treat yourself you are like him to be in his similar goodness and that is it you be identical like repeated muslims and the god said o you who believe fear allah and be with those who are truthful to help become truthful and the god messenger said man is upon the religion of his closet friend so everyone should see who befriend with and the god messenger said who imitates any people he is from them and also the scientist just chosen second road and nurse just chosen third road and everyone get different reward and means it is just the initial road selection not more not

less but the ignorants say scientist inimitable and same thing they were will be but urgent and ignorant and drunk and lost and intoxicated and unrelaxed and blind and the unprayed god not want and i said before days if you not want you will start make the impossibilities and if you want you will start make the possibilities and it is same life same realtime same relaxation same abilities same place the home room self learn without anything from outside include physical and fictional institutions or support or equipments or friends think twice from tranquil soul and it is just taking the roads if you unpleased do not want turn right you will not have exit for city entertainment but you will stay in highway spinning around america and someone said bottle of water can be 50 cents at a supermarket $2 at the gym $3 at the movies and $6 on a plane same water only thing that changed its value was the place so the next time you feel your worth is nothing maybe you are at the wrong place and those are rules but who take one rule from us

we revealed and debunked the secret and rule of death finally we studied more than hundreds young people always

fear from death and when they are olders or hurt or sick they do not fear from death and wish it and the god scare you with death necessarily to enjoy your life like youngers and when your true death time come and there is no fear before and during and thereafter and it is necessary upgrade step to go afterlife paradise the original home as you see elder fat ass people want reset and unimportant electronics not want special renewal and we are forbidden from our soul knowledge why that god verily as we are designed to have short purposeful life in this life and we back to long afterlife in permanent lucid young age and as the god he is the only nonselective merciful and selective merciful and most reasonable more than you and me about our gifted rights and the lord of goodness not bring except goodness so relax if you remember you will benefits from these secrets and if you not remember nothing will benefits you including your goods relates wealthful bank account ownership knowledge it is scary right that is the forgetfulness also known as the alive only strongest noncompartive enemy not like any of your weak enemies 1255pm19j26

talk mind keys therapy

most oppressed people acquire benign masochism or pseudo masochism or stealth masochism or deceptive unconscious obsessive emotional masochism or special masochism or unconscious vertuous or noble self respectful masochism or self respectful unintentional life defenseless or saveless masochism or straight humankind undetectable masochism or straight humankind stealth emotional masochism or dead ignoramus straight humankind stealth emotional masochism disease and abbreviated as dishsemd from enemies who are automatic narcissists and sadists in chronic oppression such when innocent arabian human always he prefer good deeds include but not limited to diseases cure and help anyone lawfully and he not prefer wrongful deeds and he is true muslim that make him appear useless and hated and will not work with the united states of america criminal government and most times he have endogenous netflix disease it is subtype of obsession and also known as

targeted individual without justice reason and unlawfully are abused and mistreated and discriminated and poisoned include in hospitals and online food secretly and deprived from health care and deprived from legal rights and threatened and terrorized and killed thousand times by the united states of america government over more than six years identified or not identified yet and still taken as unknown oppressor in stupid manner and he still in the united states of america try to get impossible goodness and hope deceive him and say tomorrow better but did not traveled yet hhh like who pray to god for improve his children and he did not married yet drunk or intoxicated or bewitched or forgot undetectably unfortunately wake up stupid fucking idiot

forgetfulness vs human or destructive or deathful forgetfulness or clinical or pseudo death or suspenseful forgetfulness effect or disease is subtype of forgetfulness disease when forgetfulness cause obsession and fear and depression and natural madness and fearful feel like about to pass out or disappear from existence gradually from the

forgetfulness like just vision remain but other organs include memory seems disappear gradually and wake episodes make the human mad and fear and question himself who am i and o god have mercy on me even if he was atheist as the old or new knowledge disappear and either natural or survive or useful knowledge stay this is the life deceptive and god said verily this verses of the quran is an admonition so whosoever wills let him take a path to his lord allah quran 73:19 and god said indeed this is a reminder so whoever wills may take to his Lord a way quran 76:29 and god said they will not remember except that allah wills as our minds or souls invisible or unknown but they are controlled in his hand swt and said he is worthy of fear and adequate for granting forgiveness quran 74:56 and in that condition he or anyone can become muslim personalized or customized or tailored as he want or others allow or at least he can say the shahada ashhadu anlla ilaha illallah wa ashhadu anna muhammadan rasulullah and it is means i bear witness that there is no god but god and i bear witness that muhammad is messenger of god and in arabic أشهد أن لا إله إلا الله وأن محمد رسول الله without practice anything of islam religion and it is just in case for verified afterlife as

those who said it single time becomes muslims totally and regardless their practices counted as muslims mercifully and luckily from god so they are treated same muslims in death and thereafter as god said indeed allah does not forgive ongoing association with him whilst not declare belief in god oneness like with the shahada but he forgives those who believe in god oneness what is less than that for whom he wills and in general in the death and thereafter and afterlife the god have the freedom to forgive anyone without exception he want always and in addition to that life saver or backup plan luck in this life you will not be like born muslims as they did not did any hard decision and you are a guest and that is was the hard life treatment or test for you in this life as you see it is the hardest idea and as you intellectual creatures intentionally destined from heavens and you take lot things just in case and it did work and without them there is no desired life and this was like flashlight gift to someone did not see night ever and travel in forest during sunny day warning them take this inert the night will comes and sometimes the transient or single time intention or wish is enough only in extreme condition prevent become muslim and even if the atheist avoid the

diseases he will not avoid the death this speech just for simple known unnew routine protocolic usual offline frozen suspended very extreme sufficient static preparedness like wear jacket that is enough to enter paradise as the life is paradise if we see and it is to us but god have given rules for everyone maximum justful entertain and safety and balance and without god no entertainment given to you if you see but forcible from god

obsession or depression or shyness or fear or productivity have inverse relationship with vagus nerve stimulation activities include sing or laugh or speak or exercise activities include dance or activities touch humans include fight include martial arts or foot ball or any desired sex with human or toy as sadist or masochist receive mistreatment accepted without digital visual adult content as humans who do not have obsession or depression or shyness or fear or not want fight others or not rude or not dangerous or not lethal are singers or dancers or fighters or footballers or sadists or masochists

reason or decision request timeout termination appropriate response delay or absence disease can lead to unwanted or unneeded or unimportant or heavy or corrupted or useless or unhelpful anymore unresponded ongoing past requests accumulation or flood or overload or overwhelm or poisoning if the human not astute or animal like positively forgetting the useless past yes useless totally completely and live the present as we did reason requests related to math unusefully and unresponded three times and after minutes still use resources but we manually killed them by avoidance as they are unhelpful anymore and it is obsession from forgetfulness and reason in your mind 5 + 823 or similar numbers not written and if the decision also known as the equal delayed or absent you may be have obsession from forgetfulness and doing math like five plus ten and see the equal number like you found the answer or win or found the puzzle answer or reward or did something good you should get maximum good feelings and similar short math in soul increase or encourage the decision make or desire or ability or power and terminate ongoing past requests and induce back to reality or induce back to right path as the successes lead to successes and can be called

mathotherapy or math therapy or rewardful math therapy and sometimes reason request sudden inappropriate termination without response lead to whole request collapse and appear as lostness

most humans even some muslims and some writers rare times have forcible neutral obsession as inhibition or brake or balancer from god as they are not tranquil but in excited state hesitant and stuck in many things and not progress locked in their minds not like god messenger muhammed and muminun not just muslims and some other tranquil souls as exception but it is not in level deserve any recognition as it is natural similar to jerks or forgetfulness or cough since ancient years this is the human

most times any negativity minimiziful such urgent abnormal blind goalless only expressional overload you can feel every single enemy like urgency in that time self fight raising you yes but pseudo and radically attackly despicably stupidly unjustly fake you or falsify you to fit others or be like others or satisfy others and make you urgent and angry and hit

things and unpleased about god and fight you on every goodness include yourself or best knowledge or rules or fuels or beneficial decisions or useful interests or wisdom or experiences or practices or true visions or treasures or received right knowledge or secrets or miracles from god will lead to destruction and it is called brief or short term self fight disease and subtype of obsession disease

facebook lovers chronic disease or sadists and masochist disease or undetectable or unrecognized or stealth or hidden or secret sadists and or vs single endogenous or undiagnosed or ignorant or stupid or precursory or pseudo masochist disease or lovers disease or reality lovers disease or reallife lovers disease or neighborhood lovers disease or street lovers disease or fans disease is when someone share posts or do things and every single time get unexpected stimulative or fitna or agonistic responses and want please or satisfy or satiate or degrade or downgrade to fit lovers or fans unfortunately or blindly or badly or unlawfully or stupidly or fucking stupidly or by god forbiddenly or sinnly like who decided to be extreme bitch

and say bad words to god front others forever try to fit and please unknown human by doing everything inappropriately or extremely or deleteriously or harmfully like obey unknown human by bathroom dirt ingestion same masochist to please unknown human but the diseased human by doing what assumed lovers need or love or like or want fearfully forcibly rest assured undetectably for low sensitivity people or sensitivity deficient people or half people and change completely stealthily or secretly or undetectably or invisibly or senselessly or unjustly or forcibly or fearfully or evily or wrongfully forget world focus pay attention scream herein wished wrongfully totally or sinnly or forbiddenly as he not allowed that esquire attorney become fictional place called meta platforms inc d/b/a facebook joker and if they hurt him he can file criminal lawsuit and civil lawsuit and same to fighter and there is no fictional place and there is nothing and the opposite for haters

selective intoxicatial fake memories as life it is was hell and cruel and negative if you remember sharply fucking idiot not merciful or warm or shying or crying from innocence or goodness or paradise like like inappreaciative family and friends and neighbors and school friends means it is was hell as wished in that current realtime if you remember not for stupid people there was no life for you except yes now and also after he see selective intoxicatial memories he act

wrong or abnormal or delusional completely or totally and forget god and qadar and best himself very experienced and learnt and intelligent and strong and serious and wiser and upgraded after these black comedy and in continuous he forget best knowledge equal he forget four things and last one was best knowledge so what it is a silly thing hhh hhh hhh yeeeeees it is stupid stupid stupid be serious pay attention to back to old limited deficient weak knowledge that caused to you harm in past you do not remember that is was best of you you are know in best knowledge keep it as creator messenger said strive for what benefits you and what you missed like your childhood or health or beauty ليتني ما دخلت لبلاد الشيطان in paradise preexist with your god fundamentally so rest assured everything is exist or available or saved firmly so ordered verily do you do not believe in god and there is no badness for some nostalgia as it is beneficial generally

overact is overwrite memory random

famous people or excited people or excited youtubers

ingredients or recipe from someone famous and unique or different or special human like anyone or extraordinary or unknown i do not know or expert or scientist or overexcited or wonderful or rare know the secret that is strong and guaranteed and faultless continuous practices important in four weeks only every day every hours gradually they automatically became professionals guaranteedly

everything have its time the relaxation deepest like prayers with khushoo and relaxed listen to quran and nasheeds and view some content online and meditation like half dead and know science and the act excited like work hard and play hard and relax hard
love himself like never before forever not see anything except himself love means it is was the life

some people do obsession to relax

act without obsession with vagus nerve stimulation but some reason but not remember or fetch need conversation with self and mean some reason need conversation silent

or aloud with self but silent is more as allow more from needed remembrance and that is why they said people do hearable conversions with themselves are good

dictionary syndrome or synonyms or overdeep or literally or zoom or deep explore or pixel syndrome is when someone stuck in word and write multiple words or synonyms for same word mean or meaning or definition like this and he have forgetfulness as he was about to forget words expressional for same meaning as he reached to kick out this time these words but he write all words related as forcible exercise to not forget and he want forcible text lines shape or frame or alignment natural perfect or he will do anything even lie to himself and also those who read quran and in extreme hateful exclusive or tight or usual poor ordinary manner or intelligence or comprehension they take single verse or its single word literally wrong as without whole knowledge like without how to read quran technique or protocol or mode or programmation or obtainable decode talent with practices and the explanations or tafsir or hadiths as the god is unique

incomparable not like anyone ever as he said his words miracle and challenged the mankind and genies to bring like this quran and rhetoric or eloquent and conditionally he use highest available narrate abilities as an example book for others and always more attentive than you he know what you hate and like so he give heaviless or boredless or nauseless or faultless direct or reachful verses and all the islam religion and all its special sciences like human genesis include stem cells genesis or this life genesis or exclusive or very rare firm or stable evidenced death science or afterlife science or supernatural organisms like genies or qareen or angels or prophets like solomon or jesus or qadar science or wisdom science or human secrets or manual include any disease include ignored bewitch or sihr disease cure guide or infinitive goodness include goods like wealth or wife or children or win on opponents or anything protection or organization or luckism or inventions or miracles or victories or teaches include special knowledge like detection science include human science include human sense or understand or feel or comprehend or human diseases include all whole psychological conditions or the past and current and future

concealed or unseen or unknown knowledge include anyone or enemies deeds or actions or movements or feelings or moods or rates or heart or soul speech or intentions or goals or methods or partners or needed details and this is god gift science called believer fırasah or strongest stories literary like joseph story or rules or general guidance came from that single exclusive unaltered and unalterable ever as the god said he will protect his ancient latest final comprehensive book since more than 1447 years in its originality until the afterlife it is something wonderful right that is was little from what behind more than two billions muslims try listen to quran the soul corrupted speech will cured guaranteedly and other diseases unknown and the islam religion it is like netflix or imdb or drama or nostalgia or creativity or scifı or harry potter world or wonka chocolate factory world like paradise honey rivers or wine rivers or milk rivers or obtainable milk chocolate rivers as no entertainments include forbidden entertainments like clubs or any sex are missed in paradise or back to future movie like sleep brother painless very merciful required upgrade step death moment back to future like date 3025 rd 10:30 am another country and also

known as back to the paradise yeah finally we back easily or mercifully but after torture or test or mission why as we were in paradise but your father adam sinned and we are kicked out to this lower earth and pregnancy or cold shower or sex orgasm or fall sleep with seizure or head explosion syndrome more than death as you see people dead with sudden merciful sleep and saw dream world but in real interactive finally that life finally yeah we wished since years but we was not able and any third dimension worlds without selectivity but in real life and paradise verily truly undoubtedly inevitably or unavoidably and this was your entertainment or life as necessarily if you feel from god as he give you gifts you did not asked more over you grow up so think good in god he will give you more tomorrow keep going and he will keep going until the paradise means he was good rest assured you are in good state all times any place any situation as he care you from birth believe me and other 100000 scientists thank god to give us live this unwished before experience and can be called netflix religion and as a matter of a fact the islam religion is favoritly irreversible third dimension inducer

cancer from enzymes deficiency from circulation diseases

read silent or soul speech also known as obsession like the physical hearable himself sing use same voice system but different frequencies allocated and you need to intentional or goalful or strategic read like the holy book silent aloud or quite inside yourself or sing anything quite or aloud inside yourself or sing anything quite outside yourself if you want to match or cure or bind or agonize or modulate the soul corrupted or antagonized or mutated speech or obsession frequency or level or sectors to suppress or attenuate or get rid or detox or fuck or kick or evacuate or kill obsession and you will not hear it again like right now repeat it when needed and also what called the sound frequencies media heard with earphone or without earphone use same obsession frequencies more than music as increase attention and cure or stop obsession activates parasympathetic nervous system for human body heal like alpha brain waves and also what called as the affirmations media or the invisible or stealth or undetectable or high level or natural or indirect or next level or rare or unlimited

or miracle or sophisticated or unspecified or unnamed or unknown affirmation talk in soul or outside soul and also known as pronounce words alone or not alone and also there is thing called talk therapy or recordotherapy generate same that invisible self produced affirmations or goodness precursors or productivity precursors by self respond to the requests or questions or insights or commands and also as not just responses but promises during the serious conversation with someone or god or self or in continue to aforesaid talk or write or sing or read or listen and repeat those words in soul or outside soul after singer like to music or quran like the verse and those who turn away from ill speech or like prayer tashahud like peace be upon us and upon the righteous slaves of allah and like nasheeds like the nasheed but my prayer or o taiba or nafsaha or himself intentional affirmations recorded before years or record affirmations for the future and will initiate mind enlarge or memory larger and activity inducer or life inducer or goalful life inducer or strategic life inducer or planned life inducer or organized life inducer this is potent all of those strong affirmations when heard with earphone or without earphone is same the mind hearable involuntary obsession also

known as negative overwhelm disrespectful voices but they are good voices precursor or goodness precursors and the human will derive as the current think mode or the obsession is continuous derivation of early intentional unjust negative single thought accepted not ignored anyway as it is was the best but not endured moments

hot liquids are oxidants

when someone excessive or excited or overstimulated or musrif he will have excitatory molecules toxicity often with high blood pressure and he will not entertain from anything literally as he is very busy in limited or tight or pixel or small or tiny or veriest bad area or room or part or sector in his mind and exist outside his whole body like not hug or hear or see or talk or refresh or live or stay or being with his soul and body and pray with khushoo to god all day and it is means they are agitated humans like animals exactly no difference want run not to live generous life and the opposite when someone tranquil or inhibited or relaxed or quite or khasheaa he will have inhibitory molecules satiety

and not fear and take decision easier and he will entertain from anything and even food like water and in his mind unlimited entertainment and warning it is very shocking in the first time like electricity as they see and remember sudden shockful gifts or entertainments comes suddenly from god and they are contain memories and entertainments and beauties and graces and they taste them in their mind and they be in overentertainment very seriously and that the most entertainment in the universe ever more than sex orgasm as this is long continuous orgasm that make the person in another world or third dimension and it is the maximum entertainment for human in this life and similar to what in paradise and that is why people love inhibitory molecules like depressants such as gaba agonists and cannabis and and khushoo and alcohol and opioids and other inhibitory molecules and all times when people excessive the god will give them inhibitory calamities and even its name similar to calmers and they are like diseases or loss or troubles to be busy in resolve like prison to restore their entertainment as they are excessive and not tranquil to entertain from most graces and also there is torture and called takeoff effect or

degradation effect or collapse effect or demolition effect or fade effect from forgetfulness like from excitatory diseases for diseased people like with excitatory diseases like rfsd subtype from obsession that is subtype from forgetfulness and prolonged oppressed or excitation stressed unloved or excessive excited and unrelaxed people who miss them as when they just wish them they cause warmness or when they get them they cause prolonged warmness treasured but unappreciated in the past as they were in entertainment but ignored and blind and when they get them they cause warmness and called reversal or transformative orgasmic reaction effect like cooling fired faucet with cold water the act itself have orgasm or entertainment more than the prolonged state last and like rescue hunger and like heal agitated working body with sex orgasm transformative reaction effect and will cause after that prolonged tranquility and satiety and hardship ease and goodness and success and warm feelings and love and life and for strongest transformative orgasmic reaction effect the human need to be excessive excited to have inhibitory molecules initial transformative orgasmic reaction magic or effect and thereafter prolonged loved condition and

excessive inhibited to have excitatory molecules initial transformative orgasmic reaction magic or effect and thereafter prolonged loved condition and either both are like passports and tickets and transportation and teleportation to enter another world or country immediately like death orgasm to paradise and it is the last orgasm given to tired souls and some young relaxed souls and those will be like he went in two worlds or countries and first world when he was excessively excited and the second world when he be inhibited like sex effort excitation and sex orgasm inhibition thereafter and that is what god do and called ibtlaa contraction before close relief and it is was to have maximum tasteful transformative orgasmic reaction effect and thereafter prolonged blessed conditions and that was exclusively beneficially for goodness not evil and from the wise god and that is why some people fear from sex they are voluntary or intentionally or insistently extremely excited and the sex orgasm are transformative orgasmic reaction effect too strong and seen disruptive and they do not want thereafter treasured tranquility or relaxation like after sleep and hardship relieved and success induce or encourage or guidance or lead or stimulate and warm feelings and true

soul remembrance and desired love and they are stressed to have that bless and same cold shower and exercise and work and islam and travel

unseenutherapy or +therapy or the most merciful cure

note or memorize or keep or wisdom or save or manage or maximum productivity or student or overload extract or reorganize or life or knowledge or sciences reorganize therapy or necessary habit or habit or addon or science or part or missed part or missed mankind part is memorize god gift or assigned or given or chosen or ordered knowledge from the seventh heaven include but not limited to the goodness or owned words or sciences or expressions or insights or inspirations or ideas or thoughts or advices or prospectives or wisdom or experiences or stories or explores or inventions or treasures or separated solutions or protocols or treatments or opinions or rates or things to do list or plans or evidences in paper book or records also known as recordotherapy or electronic system such as the offline applications like built in notebook or the offline and online applications like google keep like this right now use and since more than five years as indispensable and needed or required tool or life hack and as the dual online and offline applications is the best as

they make or cause or stimulate you feel you are active or alive or online or on the right line and stored in cloud as backup in realtime make them more safe than totally offline apps and do not forget to do manual google data export and store them in external places like portable storages or cloud or friends or relatives or public share especially if someone are targeted individual or arabian or muslim or hated by the governments especially if they reside in the united states of america or canada or most european countries those not have and not allow and punish for and warn against any new cure like chlorine dioxide for any disease and not immunization and as our strongstrongstrong overoverover or highhighhigh or and perfectionist and scientist god himself first of what he created was the pen so he said write it said o my lord what shall i write he said write what it is to be in that realtime and what shall be to until the day of judgment and it is so called predestination or qadar in the god preserved tablet or book

when someone have high blood pressure or other excitatory diseases include irritable colon syndrome or liver disease or

inhibitory molecules deficiency and all like from ongoing undiagnosed or undiagnosable stealth infections remember if they initiated after the sickness like flu symptoms and tiredness but it is was evidence ok treat or cure them seriously and most times like with chlorine dioxide or hypochlorous acid or liver molecules or inhibitory molecules there is no other choice or you will get hurt or mistreated or marginalized in this life or disappeared strangely or unjustly before you be attorney or judge or scientist or sociable as high blood pressure cause cognitive diseases like repetitive forgetfulness will cause distress to you

khushoo is potent antipsychotic as head muscles relaxed

excitatory molecules toxicity is most known for random overwrite not read memory and inhibitory molecules is most known for overread not write memory

sleep or deficiency or inability or preawake or pseudo or

delusional or misname or idle syndrome is when someone not waken completely and abnormally inhibited like half sleeper and love sleep and not want separate sleep and feel the sleep as the last resort or survive or remain or only way and want back to sleep and not want and feel it is impossible to or unable to or unpredictable to wakeup and can not wake and can not ever be happened said or note or according to the half sleeper and also will feel the fucking unknown or uncountable impossibilities or disabilities and even think to submit or file or apply to ssa for the soical supplemental income note half sleeper during find attorneys in his mind hh and think or overact or overthink or rereason or urgently reestimate again and again and again for the current day and forgot the yesterday and the whole power comes later after the wake and feel he are do good or calculate or measure or lie or feel or underplan relied on the current disabilities or inabilities or limited or weak or loading or unloaded yet abilities or skills or power or experiences or talents but after stay awake minutes the opposite happen he love awake and not want separate awake and feel the wake as the last resort or first line or survive or remain or only way and want back to awake and

not want and feel it is impossible to or unable to or unpredictable to sleep and can not sleep and can not ever be happened and means the test was fifteen minutes from god to do fajr or late night prayer and the problems or hardship or calamities solved efficiently or effortless or easily without think or anything as the abilities or skills or power or experiences or talents are back and nothing happened or there is nothing from what negatively or previously thought or heard or known or expected and verily well tolerated and same to when someone fear from cold shower but after moments he love the cold shower and not want separate from cold shower and nothing happened or there is nothing from what negatively or previously thought or heard or known or expected and verily well tolerated and same to when someone fear from death or injuries or sex or islam or diseases or confinements or other calamities but before get them or after get them or after moments he love them and not want separate from them and nothing happened or there is nothing from what negatively or previously thought or heard or known or expected and verily well tolerated

forgetfulness after sugars from high blood pressure

the regeneration only by inhibition

deprivative inappropriate or hated or excessive estihyaa or shyness or outrage syndrome is when someone ignorant act or work against and not want or refuse to have or do same that something beneficial or good or permissible or halal like minors marriage same as the god perfect human example or model muhammed or work against beneficial adult teaches like sexual fatwa especially from family relatives due to the wrong knowledge cause inappropriate deprivative shyness poisoning or excessive shyness or pseudo shyness or overmorality or paranoia or dissociation or derealization or intoxication

men lovers effect is when someone minor handsome and the mens gradually start love him and take care for him and overappreciate him or overvalue him and surrender around him stealthily to see him indirectly or talk to him or go to

restaurant or billiards concert with him or increase the relationship and they do love or affection or kindness or special shyful love activities or care repetitive everywhere and everyone prefer him or treat him as the special one or the loved one or the unique one in their life to have goodness such as the emotional support like dreamt love or hanan or affection or kindness or sexual relationship or the friendship that most favored or other goodness like some from talents benefits or become famous by him or honor about him front others and their chronic specialized shyful or insights love activities or care and their preference and treatment for the first time force or request or suggest for him to beautify more to be in the best look like brush hair and wear luxury clothes and hair cut or dye or removal or smoother and skin care and be in style quite and heavy and silent and nice and romantic and vertuous and shy and gentlemen and female like to stay receive their specialized shyful or insights love activities or care or their preference and treatment or the warm or good or loved or strange or mysterious or needed or required or wished or addicted love or relaxant or anesthetic or dissociative feelings or molecules like oxytocin or endorphins or gaba or opioids

release induce to the minor handsome and also in rare times the minor age passed but the effect or the minor himself or be mad and do the opposite as there is no hope or ability

kids
childhood
prophet like life
inert or idle or preexist or factory installed or fitrah or spontaneous slow therapy
no urgency
tranquility
relaxation
quietness
slowness
sakinah
reassurance
pleased about everything include god and self and family

why does the people do sins
curiosity
not deter one except their experiences
bravery
adventure
athleticism
enaad to fearful enemies and inability or disability transient
potent acute inhibitory or paralytic insight
why does the human like the rare sex with the partner as it is entertainment and he is pleased but not want it in this life but in the paradise where everything without exceptions is

halal and tayyib and praised and mahmoud and good and he is pray and except with himself and with his wife in this life
the thing entertainment
the human himself voluntarily pleased or accepted or satisfied or consented or agreed and rootedly there is no third party allowance or involvement or such of any that seriously but except god
to know it or learn it or feel it or study it or experience it or explore it i or judge it to have comprehensive actual or practical scientific knowledge or vision or measure or tool as mankind created primarily for science
to learn it and to do it next time with self or wife or in paradise with associated activities when needed
practice or imagine or prepare or get ready for what asked in the paradise
the religion is easy writ
everything depend on the needs
the necessity permit the forbidden things
the العنت allow the impermitted things
need
it is in the same drug placement for the body and without it

the body will be sick and if did that he is in safe space and from them the imam muhammed ibn alshawkani
exploit maximum available entertainment as god use maximum available entertainment for the people in this life by the forcible predestination for wisdom and as the human commanded to utilize everything seems good in this life for his goodness and if not did that and he is muqtasid will get hardship and beyond that it is lead to the corruption and the god said if you feared from the العنت
test
try every thing in this life تختيم هذه الحياة الدنيا
the life change lust
stimulant against the death
if not be sinner how will know the pious goodness so were right upon the god to predestine the sins upon the human forcibly
for who they be righteous in this life and the god forgive the sins together
stressed from the perfectness and the righteousness front the people like overload
allah predestined do sins on the human and that are done by ultimate force to be an example to the people for repent

and be pious like him easily and clarify what allah permitted for them such as pray to allah for immortal boys in paradise to be sufficed forever or other famous forbidden things and what the requirements to do unoffendic sins like porn safely if followed with repentance and how to deal with sins doing need like do lesser sins better and after them badness and most of this sub for the righteous who not been sinners in the past some years so please about the god chosen you for be righteous humans more than you alone in that time like be hundred human along with you the righteous soul during the past years imagine them and inspire you are helper same human on roof help humans pass ladder therefore Alhamdulillah
forcible god qadaa and qadar

why people may think fear from death
stay firm whole life principle
want maximum benefits
grant money like thing
death in other than battles lose

لماذا الناس يخيل لهم أنهم يخافون من الموت

سنة الثبات حكيمين حتى يموتون
يريدون أقصى الخيرات
يتمعنون في صرف أنفسهم مثل المال
الموت في غير المعارك خسارة

why male love male sex
curiosity not deter one except their experiences
from knowledges god wanted human know about that
god trialed most mans with that
extract heavity
lighten load
no difference between two entertainments to reasonable
like men marriage from women but that forbidden in worldy
life from time tightness and allowed in afterlife 41:31 quran
someone do everything entertain effortless
satisfy habit to other human same generosity and grant and
help to have their satisfaction for sufficiency feeling
another soul meet goodness such as the sufficiency receive
or unique incomparable loved safety receive or loved obey
induce or loved surrender induce or warm feelings and
expresses and words eject appreciate induce or focus

induce or blow mind induce or apple of eye induce or loved seriousness induce or safety induce or the special sole ownership given and excluded from self or stimulation or respect induce or appreciate induce or focus induce or blow mind induce or apple of eye induce or seriousness induce or safety induce or loved obey induce or loved surrender induce or warm feelings and expresses and words eject or bodily fluids or organs lickable and body lick or skining or heat and get warm feelings or pleasure or pleased about suffocating someone enoughly or perfectly like not before but the first time

own and control or effortless drive or stimulation or entertain or manage or run or utilize or use or loved exploitation

hit

torture

warm or good or loved fight

she want feel safe by please and follow someone as that appear sufficient thing like the muslim submit to the god no effort sex and do relaxation to her

health

why some people use toys
for curiosity
try everything in this life lust forcibly predestined from god

suffice themselves
conceal themselves
avoid god disobey

why does the people see the porn
the god prophet muhammed said the human are doing the zina of the eye in almost every day and that is predestined upon him to do that in his life forcibly without avoidance so upon him is the repentance and repent to allah all together o believers so you may success
minor sin
lamam
except the lamam indeed your lord are wide of forgiveness
anat disassociator
except if you feared from the hardship
stimulant away from the death
and by who my soul in his hand if you did not sinned the god would discarded you and brought people sinning then they will ask forgiveness then it would be forgiven for them
the necessity permit the prohibitions
contains goodness like this clarify for others
revive them to be with themselves better than with others

the god predestined and what he want do

why brighters want darkers sex seen in arabic countries and europe
color difference
slaves literally
compulsived slaves brought from africa
quite people
humble people
devoted people
secretive people
humanitarian people
poor people do work built body
entertainment
pleased
consensus
every forbidden desired
every hated desired
opposition
curiosity
bravery
bravery climax do everything and even previously abstained

things temporarily
extremism to prove and express their lust to increase their entertainment along with every hated desired so they use words nonselectively in that only not truly and even may deceived to themselves if not astute and not know that thing size small and that condition where words arose authenticity if influenced with inability back to correct faster mind words because that is overact and corrupt entertain entirely and second thing intention to increase entertainment with anything to reach goal faster and that was from smartness clearly like doing any job without look to disruptions and use all minor ways for achieve that goal and rare times not perfect work but not wrong work if one see past that is just sex whatever additions with are fake and wanted only sensual amusement half hour no thing more no thing less whatever addictives with this is sex reality apply for everyone but languages cause illusion during first month exposure and after that known life
one reason enough

why the people do rare things
to increase their entertainment

mess the atmospheres from strength

why the people smoke
opposition
bravery
get closer from fear you be safe
results
get closer from death and be safe

why the people do sex
waste excretion same urine and stool and that mentioned by imam ahmed
tranquilizer same xanax
obsession suppressant
neglected thoughts suppressant
neglected multiple requests termination inducer

why do the people listen zawamel
usually writers and singers are honest believers then they are believers brothers but they followed stray leaders so they are not from leaders and there was no trouble

other reasons

contains goodness like this clarify for others
one reason is enough
one reason is enough to cease or attack or destroy fucking obsession
if you believer i swear by the god you will convince by one thing such the god predestined and what he wanted he did otherwise sign from the faith deficiency and may be you are not ready yet to be called as believer and you will meet your lord alone
someone did something and he felt something
when someone do something unusual for first time these are the pushers exhaustively not less not more
the attractors
ignorant
estihyaa
forcible god qadaa and qadar

prayer on time

quran listen

quran read

khushoo with pray

khushoo with pray to god all time not just minutes not

separate him moments and to start do forcible continuous khushoo with pray insistently for minutes and know will still do khushoo with pray continuously even in next hours or forever so it is means the conversation with god will be so long and etern and active like voice call to partner and you are not out from khushoo with pray conversation if you think or feel or seems kicked or obsessed or distracted or interrupted because you are already in

no israf

no sins

doing any sins not offensive and major and become muqtasid not musrif and like not offend upon god like association but like forget prayers and see womens and other sins and god forgive all sins with repentance and god said say o my servants who have transgressed against themselves by sinning do not despair of the mercy of allah indeed allah forgives all sins indeed it is he who is the forgiver the merciful and you still innocent after easy repentance in last prayer or pray as god messenger said repentant from sin as who not had sins and this life not created except for your entertainment but god organize us with forcible predestination and fate and religion like with

rules and repentance and if you have goods if there was no god you will not get them
no sins until sakinah come back as it is was before
no overstimulation
no urgentness
zakah weekly
no negativity
no obsession ever even tiny thing do not answer or explain
no overact ever even word vocabulary
no overpower
repentance to god at least specialized minutes or hours like request forgive from men firmly and honestly and masculinity and undoubtedly
worship activities first in initial wake time
read quran after wake
believe in qadaa and qadar
believe in qadaa and qadar until this realtime yes you are correct and on way or right train stop station
pleasant about god and self and calamities
soul speech and anything imagination are god waived but the best are forbidden things are imagined in paradise like with not same this life someone but their similar someone

to keep entertain good as god wanted from intended someone as too much entertainments from same intended someone sabotage himself entertainment wonderful magic or miracle secret unknown and to avoid fitnah and without speak to others or plan or change the self wrongful to intended someone

not do sex with none marriage pairs

sex with oneself and marriage pair and whatever else in the paradise

duaa for self and others

quietness

no diseases especially forgetfulness or cure them

no profanity

no spontaneous or blind or unneeded or playful or chatter threats or profanity without just need

recordotherapy when needed

wish death every day sincerely

are you ready for upcoming calamity so be ready and this is to avoid hit with knowledge as the scientist not get affected

talk less than what you listen of good things like quran

khalwah with khushoo and pray to god for hours as available without lights or disrupt or distractors or noise or

stimulants or excitation
heah muscles relaxation
no soul like and deny others lure and that as supposed and everything depends on needs and this is life and god predestined and what he want do
sleep night
sex
nutrition
no overlaugh
no laugh in calamities
sense hasanat and sayaat scale from childhood and does sayaat amount erased and yes after repent request words if you feel bad or anything or obsession or heart tightness or tightness in heart come check did you did those today or recent three days if you missed anything that is was the reason i dare you if not missed one and that is was the punishment from god in that realtime verily if you remember what said in quran and hadiths and rules and if you did them you should not being worry and in addition by default or rootedly or rulefully or righteously as the god love righteousness you should not face or being worry but worship you are on right way from god to paradise yes be

static do not be degradable or melt such chocolate in your ignorant mind no you are static solid men

rules

muslim daily routine forever

self fight disease

sex
marriage
toys masturbation
health
zina protective
rape protective
self harm protective
prophet life inducer

violence suppressant
recklessness suppressant
desired positive inhibitor

god relationship booster
worship maximizer
duaa inducer
progression inducer
planningenesis inducer
sex yield molecules
inhibitory molecules release
endorphins release
opioids release
mood stabilizer

slow therapy is slow down thoughts voice speed to quite slow sincerely as like that your maximum speed limit deceive your enemy aka the mind and say ok ok like time slow cheat in gta vice city and tell dear or sir madam obsession just friendly reminder that you will still thinking yes we do not have any problem yeah and you are the loved thing so rest assured obsession sit down why you are spicy face upset want leave but slow mode because you currently this minutes slow man like flash man hh and want use energy or battery save or efficient mode like energy star but

energy religion you added to yourself seriously as electricity is costly this days and no pay agreement bill or no ebt or unemployed and no parts like new unheated processors or transmission in hospitals and you do not want shut down early and you want quiet mode and you can practice on read book like holy book very slowly silently or hearable slow sing or listen to slow songs like tranquil nasheeds and also move your body very slowly and you will relax from soul corrupted speech and both the secret behind khushoo or combined in khushoo as duaa words to god is very slow and paused between multiple time and nice and smooth and relaxed and deep hearted words and body high end relaxed not with any move or control or move very slow and breath slow in and out like in five prayers and sing quran slowly and as a matter of a fact the real secret or natural or supposed permanent reason mode or think mode move slowly and are very slow needs moments to move between thoughts even when someone want to praise god during stress he need to give his mind moments to exit or freed as he need naturally to praise sincerely very sincerely and the god want this not act in sabotagative or stupid or clotting manner like urgent excessive sudden painful there is no

great like you god as the god messenger was the most tranquil soul and said do not run to ongoing prayer but walk tranquil and god said man was created of haste i will show you my signs so do not impatiently urge me and the urgency are enemy to god most times and means we are slow creatures beings naturally and we should be slow creatures beings and sometimes we break fitrah and become ill and almost all creatures include elephant and cow and fish and owl are relax except us and read slow text l i k e t h i s i n t h e n a m e o f g o d and slow therapy more helped with obsession molecules like inhibitory molecules and inhibitory molecules release inducers like meditation like khushoo and cry and also the opposite fast therapy like movements activities like run or flash think not between like high or low temperature treatments so you are allowed to slow therapy or fast therapy and when you do slow therapy your mind or body as a matter of a fact confirmed have like vehicle drive speed stabilizer when you insist on slow therapy for more than quarter hour your body will slow down to being like in the slow mode or khushoo unbelievable or very impressive not predicted before every time like it is was impossible but

possible yes and very possible and we do it all time every day more than ten times easily as muslims and it is the easiest thing in life as a matter of a fact as it is just need leave the things away like excitation or overstimulation activities like devices or urgency activities or most works or tasks but may be not predictable in the current exact think like sleep exactly but before sleep when forcibly wanting sleep it is will happened and like this we should go to things patiently or sincerely or honestly or carefully or comprehensively or as supposed to reach them and the first or not time we torture obsession

there is two memory obsession memory and unseen memory if you obey obsession memory commands like do act you will think it is your default memory due to your best knowledge and set it as default and depend on it and switch from unseen memory to obsession memory and this happened only if you urgent chronically and if you do not handle or deal with obsession memory you will not have obsession but nothing except unseen memory as anything include negative things yes still need care and messaging

or communication as fucking simple things like justify or answer or interrogation and response and request or inquiry from you to fuck you like api or chatgpt work on prompt he utilize resources or the stick onto soical platform happened only after recent share of thing or interact or clay melty need repetitive shape and if you not utilize unknown resources but unseen soul you will have better life yes of course you need forcible serious practice if you men less than three days persistently trust in unknown as we trust and still good do not respond to any word inside your brain as it is fucking obsession to force switch or use subconscious or unconscious mind try this scary experiment مش عايوقع بك شيء no one will as you fear avoidably oppress or affect you whatever fucking loop thoughts ask accuse suggest do not see or listen or forbid language conversation from appear rootedly in your mind you are very safe when you silent more than when you message and if you not in safe from yourself from where you will be safe so let it silent and you still good i promise you trust in unknown silence after run like from or ignore obsession and you are allowed only to remember or talk or pray to god all time and physical people around you and if you know what

between you and god the obsession will not harm you both because you both do not care about them and the most indispensable important or concentration or extract is only your acts outside your body not your inside head as it is like concert collection of satans and angels and your soul yielding mixed voices falsely interpreted to you as your voice every time i swear in god every time yes and do head and reproductive organs muscles relaxation and you need to be strange with yourself for goods and you will only know after three days or simply become muslim guaranteed as it is will install brand new human brain and heart or body firmware or bootloader or kernel or recovery mode or software or system with safe mode power option and jtagged by its known words but currently does not support wifı direct or airdrop or bluetooth or nearby receive features due to human vulnerabilities and will restrict harmful things access to you

thermogenesis from vagus nerve stimulation as meditation deepened like khushoo or sujoud or deep relaxation or sing or overspeak increase body temperature

follow rules of frivolous or nothing or wastefulness robotic syndrome is subtype of obsession when someone overact before write one word like happylingly he love get lost and research as he want be robotic

chronic plan or motivation or decision or reassurance syndrome is when someone overstimulated minimizingly reassure and motivate himself and accept pseudo decision like happylingly we will write it down yeah about something forcible predestined by god will reach it at right time next hours correctly but his acts and obsession destructive sometimes

placeotherapy is moving to another place and change the people around you

singers have less obsession or depression or anxiety or fear as from vagus nerve stimulation and as they tired from talk enough they will not do obsession and means obsession have inverse relationship with vagus nerve stimulation like

speak or sing or humming and rare times when someone do soul good speech and not called negative obsession or when do negative obsession he will talk less and when someone not do obsession he will overspeak and when someone overspeak or singing or humming even to himself or acquire the potent or powerful or faultless or very efficient or guaranteed private video record therapy depend on needs or permanent habit and also known as recordotherapy will not have obsession and as the children not obess as they do vagus nerve stimulation like speak or laugh or sing or humming or cry multiple times and not have negative thoughts

sometimes laugh from arrive to طريق مسدود or blocked thing or nothing or dead end in mind

chronic summarize syndrome also known as chronic repeated or regenerative or excessive or overact or inappropriate summarize syndrome and abbreviated croroeoooiss like infections organism or bidah or astray seek or inappropriate unnecessary new way seek like

search for same already learned science syndrome is when someone excited or overstimulated or overact or hyperactive or overpower or urgent or forgot or not remember or excessive before or during or very robotic or static or obsessed keeps summarize unnecessarily in things forbidden from repeated summarize but meditation which also will include remembrance rootedly and for example khushoo and also known as seeing from out of the box without words or giving up the words because you already know what you need to know and for example we listen to quran verse and we said obsessionally or inappropriately or abnormally in our minds the god made those young singers entertain people and it is was less than what deserve or unappreciative for them and for us as we already know bigger and we remembered someone he will say and write down oh ok the god made those young singers sing that verse in that tune to entertain people for purpose and he just see that written words not other world and think it is the islam and still collect or summarize that additions not the important or prioritized and still not see from out of the box and continue after the aforementioned unappreciative to give another example but this time for the

obsession or overthink and it is lot than what deserve or excessive or overact or hypocrise or overvalue or overspend or overimagine or overestimate or overreason and what like

synonyms syndrome when someone obsessed stop on word and write same different vocabulary and not continue or give priority to planned upcoming words

sleep diseases like insomnia or sleep interrupts and high blood pressure before sleep from deficient diseased liver as liver before sleep try to synthesis sleep molecules and will cause agitation during synthesis like from conditional essential amino acids as they are continuously produced every moment or neutralizers like glutathione or cholesterol or estrogen or inhibitory molecules like adenosine

someone take uridine and caused liver attacks like yeast extract and plant protein and sugar alcohol and increased palpitation and selective agitation like akathisia aggravators or belly muscles contractors and insomnia and absence

seizures before sleep as liver try to synthesis sleep molecules and diseased liver will cause excitation like high blood pressure and increase heart rate and agitation and half or absence seizures during sleep and sleep interrupts like from neutralizers deficiency

dementia after sugars from liver disease like neutralizers like glutathione or cholesterol or estrogen

sex orgasm moments are short half life and long lasting mood stabilizer means if you thinking positive thoughts during orgasm you will be good after as neurotransmitters release is like some people who take antidepressant drugs like alprazolam they choose preferred mood like relax during administering and same to sex orgasm

head muscles vacuum contraction also known as multiprocessors memory and head muscles relaxation also known as single memory or single window memory or processor or single processor memory l and the later is the

most natural and faultless due to the enough received knowledge and experience like one time and very accurate and not fear except from god memory and larger with pure details very sharp front eye and will not rewriten and for reason like solve problem efficiently and easily and previously named with the single face soul or mind or memory and the pure natural potent reasoning and the first is not needed for almost everything as four processors working with urgentness or rapidness regenerating or reasoning from beginning every time will give mixed results with not yet and yes now or will not give results as it is larger or stronger than matter or overact or overpower like hammer hit glass slow time but destructive or touching semen with fired glove and can be called satan intelligence regenerative model or self stimulant syndrome sometimes means it is overact and harmful and evil damaging who not give it up and switched to the first by math and switched from head muscles vacuum contraction also known as multiprocessors memory to head muscles relaxation also known as single memory by meditation like khushoo

stimulants like khat toxins soon after will cause immediate temporary acute liver disease and sometimes liver pain from most toxins and during sleep seizures or absence seizures called الرازم

ptsd or psychosis or anxiety or depression is type of obsession and they are disease type of head muscles vacuum contraction

when switching from head muscles vacuum contraction to relaxation like switching from sympathetic nervous system to parasympathetic nervous system mode gear any sensitive thoughts will cause inhibitory molecules like endorphins release make you relax and like heal spill on other related organs like heart and belly and other organs like orgasm and vice versa when you on the other gear contraction will cause sympathetic nervous system molecules release not sensed but if excessive will sensed like high blood pressure and like sleep and awakefulness modes

biostimulants or stimulants deficiency or addiction disease called mumarah disease when someone overact or overspeak or altercating not to give nor seek truth but to feel euphoria or alive

when you ignorant or continuously overstimulated or excessively stimulated or excited or excitatory molecules toxication and you remember stimulant thoughts and you say but i will be more best than him like binding toxin to your receptors and afterward live everwhere with that

potent psychological neurotoxin which is totally prevent you from spontaneous increasement written or set or ordered or destined from god and it is type from ممارا‌ة and means do not do nothing show aforeseen deceptive decisions seeking and do not even believe that as it is disrespectful to your soul and empties your head by head muscles contraction and silence

some dementia or excitatory molecules toxicity people urgently blindly voluntarily start do acts without hesitation tolerated easily after finshed and wondering by comparing past as he was used overacting in almost anything like pray make it long causing frustration before pray again and more in combined prayers as estimated and anything is caused by his overact that unapproved to himself and hated by god and seems good and loved by evils to eventually kick him from prayers fundamentally and that is why overact like herenow hh is the most very potent destructive major sin in islam that can lead to hell in this life and afterlife and the god messenger said ruined are those who insist on hardship in matters of the faith and said there will emerge

among you people whose prayer you will look down upon or belittle and the aforementioned means in contrast to clinical depression or overact or overthink or obsession or ignorant rarely hesitate and continuing after tolerated easily after finshed as they are agitated they want stimulants like running or overspeak to feel alive or good or relaxed by distraction for agitation like during sex

sudden palpitation episodes is for forcible more secreting fluids contain neutralizers as heart dried or irritated like allergy and also the same to alcohol flush and meaning deficient fluids or memory factors like neutralizers like acetylcholine or glutathione or lipids like liquid lipids or steroids like cholesterol or estrogen deficiency or dementia all like from liver disease and will cause alcohol or caffeine or niacin which is cholesterol depleter or spices flush and palpitations and skin diseases like itch or acne and as someone when taking some drug like acetaminophen or uridine or spices will more likely to have liver pain and palpitation and dementia and itch and night absence seizures as liver busy for toxins not sleep factors and

reversed with liver disease molecules like neutralizers molecules like nac and olive oil and steroids like estrogen or cholesterol from fish oil and honey

provocative thoughts is intentional from god to opposite or causing that failed or useless or delusional provocative thoughts opposition or denial or causing paradoxical effects resulting in preexisting denial increase and other goodness and increase your relation with god and make you feel the life more and also you may do not see now yet but from others perspective and from outside yourself you see and general stimulant for life and means always it is good for you and you feel good after it like passing intensive continuous exam from god directly or intentionally all your life and if you without them you will die

endogenous netflix disease abbreviated end is subtype of obsession or depression some victims have spontaneous shows and movies about urgent or fast and furious relieves such as scenes draw attention appear good from oppressors or undeserved scenes or assuming the currently

ongoing evil oppressors laughing or relaxing or liking or loving like from this now now we verified it is even contain a hint of fast and furious movie as it is never happened before what imagined or the imagination if you see and most times the oppressors will not have mercy on you and you need to move from your place and it is called placeotherapy but not placebotherapy and as the general rule say you can not heal in the same environment that made you sick that is fact and again and again and again the drama back but we know you like to watch free convenient endogenous netflix like netflix subscribers in 2024 estimated to be millions and millions and millions and if you want to change another powerful movie you need effectors like fucking hint from oppressors or sometimes they send satans mislead you or bewitch your qareen induce new movie titled with see more at https://www.imdb.com/ and you have sadists and masochist disease

alcohol cause temporary acute liver inflammation or disease resulting in intoxication and restoring health state

like neurotransmitters release and thermogenesis and tickling or liked or loved or fun or voted to someone and meaning most intoxication or dementia diseases from undiagnosed liver disease

heart failure called weak heart failure to pump from deficiency like energy molecules deficiency and the others excitatory heart disease called heart attack or the death heart arrest or stop

obsession or depression people seek relaxants or endorphins or inhibitors or love or care or حنان by anyway thinking collapsing or collecting or cleaving all current thoughts yielding innocence feeling

heart or dementia or kidney patients death after antipsychotics from muscles contractors deficiency such as acetylcholine and oxytocin and dopamine blocked

symptom from acetylcholine or protein deficiency is finger

shake or instability during pointing

pain signaling molecules depleted like acetylcholine and other neurotransmitters and glucose and fluids resulting in no pain after prolonged stimulation like hitting skin multiple times or clitoris overstimulation numbness or prolonged sitting numbness or pressure or injury numbness including pellets entry or needle placed intravenous numbness or acupuncture numbness or finger nail trauma numbness or bones hit numbness and almost all of them loss conscious soon after pain as potent inhibitor toxin and neurotoxin and cardiotoxin and acute stimulant and energy molecules depleter and people with diseases including but not limited to diabetes or heart diseases or abnormal blood pressure or lung or liver or seizures or kidney or adrenal fatigue or infections or malnutrition have more risk to low blood sugar and low blood pressure and coma and death primarily from psychological pain as older people receive trauma die and atypical injury pain that we all know is same as larger injury pain as that maximum nerve ability to cause pain means will not exceeding what previously known and yes well

tolerated gradually if you want like using hair epilator machine and entertaining or busying or stimming yourself with warm feelings or remembering god or vagus nerve stimulation like reciting or humming or crying or closing eyes forcibly and contracting and shaking whole body organs as possible or movements or math like hair epilator machine first time strange seem painful but after that it is tolerated and entertainment or sex they get extreme pain but they are entertained or busy or stimmed or distracted with warm feelings and they loved it and they will repeat it countless times or oral spices painful more than bullets in belly or masochists and called hedonic reversal effect or suiciders or some people honestly wished to die multiple times there is something relax you found it and try pull hair and increase pull gradually you will see the pain not increase that maximum nerve effect for any pain causer and means the initial pain is the final pain and will not increase but decrease and tolerated over time and death is necessary step for upgrade or rebuild and come again new as the life is available in excess for anyone permanently means reassured whatever you want in the past is available in the future forever and more beautiful than you think and

imagine warmest place you had the paradise is more beautiful undoubtedly one percent you can not imagine whatever you did as you forgot what dinner yesterday this is miracle or mediator or tool or tactic or intentional action open windows strictly sometimes whenever the god want exceeding your mind

oxidants name melters or destroyers or heaters or resetters to empty molecule or null molecule or gasifictants

electron carriers such as methylene blue or ubiquinone like oxidants such as chlorine dioxide or uv but oxidants eject or freeing electrons from things to host only and also they are detoxifiers such as for trapping metals like prussian blue for digestive tract metals or antiorganisms and meaning anything related to electrons like electron carriers or electron ejectors or electron donors or electron modulators is detoxifiers or antiorganisms

acetylcholine nicotinic receptors is called acetylcholine

gated ionic channels correctly and meaning some receptors are ligand gated channels

symptom from liver diseases or brain diseases or acetylcholine deficiency or endogenous oxidants toxicity or acid toxicity called metabolic acidosis or neutralizers deficiency or antioxidants deficiency or excitatory molecules toxicity or melaningenesis deficiency or sunshine absence or infections is blurry edge of iris

rare stupor and stimulants seek like eye twitches or overspeak after overstimulation such as tubes overstimulation like very excessive chew continually for days without relaxation like with sleep or couple hours stop or break or other relaxation specialized for everyone and like khat chew filled full mouth or vagina overstimulation or rectal overstimulation or ear overstimulation causing forcible excessive continuous head muscles vacuum contraction for time depleted acetylcholine and oxytocin storage which lowering spontaneous release during relaxation and even overstimulation will cause forcible

release until residuals depleted completely and energy or muscles or neutralizers molecules like protein and steroids and also full mouth chew or manual head muscles vacuum contraction if with heart contraction like mosty from left shoulder lean toward can lead to heart tightness or pain and reversed with relaxants like laugh or vagus nerve stimulation or sex or sugars or inhibitory molecules

symptoms from inhibitory molecules deficiency and most times from toxins like infections is excessive excitation conditions like pain such as teeth pain and more sensitivity or intolerance to food and itch and high blood pressure and increased heart beat and shaking and inability to sleep and wake up during night multiple times and head explosion syndrome and involuntary voices and forgetfulness and agitation

most times sweating after thermogenesis like spicy food

abnormal muscles relaxation such as head muscles not

contracted by vacuum like wise or firm humans and the vacuum contraction induced by selective thinking and meditation and selective stimulation and cough and vagus nerve stimulation and inhalation and full mouth chews and correct relaxation and during vacuum contraction the ears move and nose open but most times unnecessary and overact with correct thinking and diseases absence and the abnormal muscles relaxation caused from malnutrition like sugars for acetylcholine production or diseases or overstimulation or wrongful thinking and sometimes cause hypothermia and rare cognitive abnormalities and have inverse relationship with intracranial pressure and as coldness cause muscles contraction and vibration for thermogenesis

if the human body is extremely inhibited or excessively stimulated or forgotten or obsessed or ignorants will want relaxants even if that thoughts unjust or oppressive or malicious for overload or mistreatment forcible relax or will want stimulants even if that thoughts unjust against him like inappropriately fearing himself like children or feeling

saved or grateful while he is currently oppressed or in pain that should make him not wish the life and all around him on them rights to him but forgotten and the important is to be stimulated and feel alive or feel the life and as after that he know he will being good in body will counteracting anything so he be in unjust reductant loop like this unnecessary part stimulant and almost anything stimulant like talking unnecessarily or randomly or wrongfully and this is rule intentional from god to live and if he not make you fight with your mind you will be inhibited all the day and not feel the life and also obsessed human he relax in his space and think it is the unwanted thoughts space while supposed to kick thoughts from that space means relax in your own mind in any area it is your world not the thoughts think freely and god forgiven this already even against him and means you have the right and supposed or of pure nature or fitrah or smart way to relax in any cognitive frequency or area or shape or wave or receptor or channel or space or sector incited from thought if you kick thoughts and stay there without thoughts like avoid write and somewhat read but feel as said someone knows his mind truly readed in realtime remotely by exploitative magician via qareen

preparation magic means someone will exploit this

hair loss from clogged pores like organs blockages such as eye duct blockage and anticoagulants like dmso and neutralizers like chlorine dioxide help

involuntary voices or movements from excitatory molecules toxicity

alcohol intoxication like weak sepsis episode or acute selective inflammation episode

detoxifiers such as neutralizers like chlorine dioxide or hydrogen peroxide reversing intoxication from alcohol or drugs overdose

abnormal breath odor from hydrogen peroxide deficiency

hypothermics also vasoconstrictors such as antioxidants

like ascorbic acid

heart pain after ascorbic acid from antioxidant effects decreasing necessary oxidation for energy production from lipids and glucose to heart as ascorbic acid decreasing body temperature and hydrogen peroxide increasing body temperature not causing heart pain

alcohol causing transient inflammation like as increasing temperature by increasing hydrogen peroxide as hydrogen peroxide increased in inflammation called fever

alcohol aldehyde degrade deficiency or alcohol flushes from hydrogen peroxide deficiency and have higher catalase

antipigments like vitamin c is also oxidant secondarily not primarily

movements diseases such as restless legs syndrome from toxins like infections like streptococcus or coronavirus or mycoplasma such as mycoplasma pneumoniae or tuberculosis or lyme disease or leprosy as taking nicotine with non selective dopamine agonist or taking hypochlorous acid or chlorine dioxide relieving anxiety and restless legs syndrome

what open and pass skin pores is also prolongedly open and cross bbb

ocd or obsessions from forgetfulness such as from diseases like infections and oppression from others and excessive excitating such as very excessive stress and angryness and not doing zakah and not khushoo to god and not feeling oppressed leading to feel falsely oppressor and not reading holy book and not praying at time and being in place not accept anything of you for long time so you see your vertuous feelings and goodness useless and will living semiforcibly idle with the false bad feelings and guiltiness and cruelty given from others continuously so you be

locked in yourself with lot of vertuous feelings and goodness and mostly false bad feelings given from others continuously will causing automatic or spontaneous or default innocent derivating of that given bad feelings and evidence for that before months there was nothing but goodness and extreme rare times the wanting to speak itself only not doing the act is verified if you talk to someone known as the speak not meaning the wanting to do and extreme rare times the wanting to do act verified if you did intentionally healthily not unhealthily and without any affector such as magic and continuing to the mentioned being in place not accepting anything of you and living in wrong place and surrounding with wrong people and magic and inhibitory molecules deficiency as ssri increase serotonin improving memory used for depression similar to obsession and as reassured souls with god without bad feelings and relaxed deeply and obsession same depression

niacin same alcohol causing flushes

missed vitamins in childhood causing disabilities will not deriving some molecules from vitamins after time and meaning missed vitamins derivatives and hotting tumor activities in organ affected and in addition to inhibitory molecules such as sleep molecules or coma and nutrition same umbilical cord and electroconvulsive therapy and heart electric shock and parents whole blood transfusions for premature birth defects

streptococcus same staphylococcus aureus

some molecules found naturally are inactive as pseudocoblamin identical to coblamin but known only in body and as synthetic antagonist similar to synthetic agonist but inactive molecule and meaning not every molecule discovered will be same another molecule

they said contracted organs such as curved hand or wrist symptom from autism autoimmune encephalitis and meaning infections or autism or brain palsy

cationic dyes like methylene blue have some dmso effects such as solvent with anticoagulant effects inhibiting platelets aggregation and as dissociating toxins from hemoglobin called methemoglobinemia and meaning for detoxification such as proteins bounded with toxins like uremic toxins bounded to proteins in ckd and proteins receptors bounded with toxins and cells such as throat and bone marrow cells bounded with chemotherapy toxins and also as vehicle as prussian blue detoxifying heavy metals by trapping them to exertion area

diseases more occur in males treated with female molecules such as estrogen and progesterone and menopause molecules and relaxation and diseases more occur in darker people treated with whiter people molecules such as melanin transfer inhibitors

involuntary thoughts or random bad thoughts suppressants some excitatory molecules such as dopamine and excitatory activities and steroids and some inhibitory

molecules such as crying molecules and meditation molecules and good deeds molecules such as oxytocin and endorphins and pain released molecules and socialize and vagus nerve stimulation

trimetazidine shifting heart energy production from fatty acids oxidation to glucose oxidation which requiring less oxygen by inhibiting enzyme oxidizing fatty acids and meaning for angina pectoris either inhibiting enzyme leading to shift or boosting enzyme with chlorine dioxide will increase heart energy and detoxifying resistant lipids but sometimes need liquid lipids supplementation as can cause severe lipids deficiency especially in thinner people appeared as sudden weakness with breathing shortness episodes reversed with eating and prevented with liquid lipids

some called genetic diseases are chronic diseases not genetic diseases fundamentally

symptom from inhibitory molecules deficiency or sympathetic nervous system overstimulation belly fulness or contraction

cold shower can cause blockage stroke or hemorrhagic stroke as it is cause vasoconstriction

some bronchodilators are vasoconstrictors

some natural drugs used off label beneficial

dmso heal hemorrhagic stroke by cleaning blood on brain cells or thinning and increasing blood permeability on cells leading to accelerated detoxification or making blood friendly to cells

dmso open blood brain barrier temporarily allowing molecules such as horseradish peroxidase and drugs and dopa delivered to brain cells and detoxification

take olive oil and glycine 10g did not worked again immediately for agitation and high blood pressure and agmatine 500mg worked and followed day beets and beets juice for memory and agitation and high blood pressure and energy and may be also from corn desert

preventing tooth growth with cauterization like nail matrix removing

someone turned phone screen yellow with eye comfort mode and during browsing facebook felt less steadial bad stimulation that initiated since long years from facebook and definition for less steadial bad stimulation is less continual initiated since long time of affection or less fitnah or blowing mind or boredness or badness from spending long time recently in facebook and felt more fresh to facebook like for first time and meaning changing phone screen color to different colors periodically or browsing application or device itself or person place like changing position in room or changing things around like furniture or

lights colors like to blue color weeks per month or moving to other room or other place or changing clothes will prevent blowing mind accumulation that initiated since long time and will make anything feel fresh like first time and you what you believe
8 am 25 november 2025

thinking sex releasing molecules and exciting person and stimulating nitric oxide production in penis and thinking sad calming person and releasing molecules and secreting tears and thinking angry releasing molecules and increasing blood pressure and heart beats and exciting person and remembering some good deeds releasing molecules with goosebumps and calming person and similar to reading book

heart failures initiated with high blood pressure and over time the stressed heart weaken pumping causing low blood pressure and meaning blood pressure fundamentally sign from heart if pumping fast correctly will cause high blood pressure if pumping weaker will cause low blood pressure

for example high blood pressure comes from adrenaline exciting heart causing more pumping and appear high blood pressure and over time adrenaline still exciting stressed heart but pumping weaker continuously or episodic and appear low blood pressure and low circulation and they treat with more adrenaline to exploitatively forcing heart pumping more which not reliable solution or recent endogenous adrenaline was residual and depleted over that time and no other energy molecules available as digioxin strengthening heart like acting as energy molecule or selectively in adrenaline deficiency people commonly called heart failure from low blood pressure

almost all infections blocking acetylcholine causing increased heart beats and respiratory diseases as nicotine for corona virus

inhibited person like clinically dead lives longer than most excessively excited persons as they get heart death like those trading stocks

hydrogen peroxide will enter the body and act as direct mao effects inactivating monoamines with oxidative deamination which lowering excitation like blood pressure and meaning excessive oxidation or undesired spontaneous oxidation like from antioxidants deficiency destroying or inactivating neurotransmitters in brain diseases

any molecule bind to receptor it is either antagonist or agonist or both partial antagonist and partial agonist for example agmatine either antagonist or agonist or will be both partial antagonist and partial agonist for adrenergic alpha 2 receptors yielding balanced effects less than default natural agonist molecule if it is was and meaning it is never be without effects but either antagonist or agonist or both called neutral

streptococcus modulating transmitters like serotonin positive allosteric modulators even if detoxified with antibiotics still some toxins bounded or single time

modulated or streptococcus and its toxins not detoxified with antibiotics fundamentally but inhibited partly and its toxins both or either still damaging aortic valve stealthily

infections like staphylococcus aureus or streptococcus causing endocarditis and myocarditis and valves diseases such as from rheumatic heart disease called aortic valve regurgitation or stenosis from deposited toxins as aortic valve calcification and showing damage over time as prevented repair as drugs or toxins causing aortic valve damage and tumor and ulcers and sore throats and as microbes have toxins affecting valves

antioxidants is antiinfections damages and antispontaneous damages such as antioxidative stress damages and called antiinflammation and most antioxidants antiinflammatories

heart pain after vitamin c depleted nitric oxide causing vasoconstriction

methionine inhibitory as excessive glycine depleting methionine over time and glycine be without effects or glycine as inhibitory molecule decreasing excitatory methionine

most sulfated or methylated molecules excitatory and some like agmatine sulfate or magnesium sulfate inhibitory

glycine utilizing nitric oxide

heart attacks and heart failures almost always from high blood pressure

heart arrest or heart stopping and heart failures from high blood pressure and vasoconstriction including blockages and excessive excitatory molecules and inhibitory molecules deficiency and energy molecules deficiency as they treated heart failures with vasodilators lowering blood pressure and widening blood vessels and heart attacks

from blockages such as plaques or clots or coronary spasms like from cocaine or alcohol withdrawal or from high blood pressure and excessive excitatory molecules and inhibitory molecules deficiency and sometimes heart failures called heart attacks

vagus nerve stimulation for memory stimulating acetylcholine

what for memory inhibitory molecule

fish oil inhibitory called sometimes immunosuppressant and antiinflammatory

pain in right arm followed with liver pain from excessive glutamate and low gaba and meaning most times pain in left hand from heart or brain stroke

heart attacks after eating from acetylcholine deficiency not

released to decrease sympathetic overstimulation

estrogen activate prostacyclin

excessive excitatory molecules increasing clotting as sepsis

nitric oxide for melaningenesis and cells regeneration as increased in reproductive organs

gases like nitric oxide factors disabled most times first in almost all diseases

someone said cannabis released molecules for restless legs syndrome and fatigue and mood

other way to increase active neurotransmitters like serotonin using glycine causing stored serotonin release like orgasm or shower and replenishing serotonin with

serotonin substrates or will causing agitation or not causing agitation but without effects or with alone serotonin substrates both will working more safe than serotonin reuptake inhibitors

excessive glutamate not converted to gaba

toxins like infections are negative allosteric modulators for inhibitory molecules and positive allosteric modulators for excitatory molecules like other stimulants like alcohol

giving glycine with serotonin substrates like protein or tryptophan or 5htp as glycine causing serotonin release which depleting stored serotonin like orgasm and if there is no serotonin substrates for serotonin production will not replenished causing glycine without effects

almost all typical antipsychotics without declaration blocking total dopamine receptors and total acetylcholine receptors and total serotonin receptors and total histamine

receptors and steroids such as estrogen factors causing restless legs syndrome and lipids intolerance and breast cancer and as same natural dopamine unified molecule binds to different receptors synthetic inactive dopamine molecule will bind to total receptors and if they said they used vehicle unloading in selected receptor most times some amount leaking systematically called side effects and meaning synthetic dopamine blockers almost always mildly blocking other dopamine receptors and most times mildly blocking other neurotransmitters receptors as most synthetic antihistamines also anticholinergics

agitation and increased restless legs syndrome after ingesting lipids during ongoing antipsychotics effects from inhibitory molecules deficiency as ingesting water overstimulating body but without restless legs syndrome when no inhibitory molecules like glycine as they gave inhibitory molecules like estrogen for akathisia

sometimes prolonged some beta blockers blocking noradrenaline causing other inhibitory molecules increasing

like serotonin and no enough gaba typically and serotonin blocking low dopamine and no enough gaba to blocking elevated glutamate causing restless legs syndrome as serotonin reuptake inhibitors abnormally increasing serotonin and serotonin blocking dopamine which allowing glutamate to increase decreasing already low gaba and noradrenaline increase and no enough other inhibitory molecules gaba alone or with glycine to decreasing glutamate and noradrenaline causing restless legs syndrome as any molecule have inverse relationship with other molecules meaning when excessive will decreasing other molecules and when low will allow other molecules increasing but some molecules when any molecule not excessive but high will have more inverse relationship with some other molecules decreasing those some other molecules without decreasing remaining other molecules like high serotonin blocking dopamine or high dopamine blocking serotonin and noradrenaline and gaba and excessive dopamine blocking serotonin and noradrenaline and gaba and glycine and excessive glutamate blocking others mostly inhibitory molecules and causing seizures and excessive noradrenaline blocking others mostly

inhibitory molecules and causing heart attacks and excessive serotonin blocking others causing sedation called serotonin syndrome and excessive gaba blocking others causing sedation

blocking inhibitory molecules like serotonin 5ht2a will cause agitation when lipids ingested as lipids release and want fluids secretion factors molecules like inhibitory molecules like serotonin like to induce relaxation or during blocked dopamine from antipsychotics

supplementing inhibitory molecules like glycine and liquid lipids and not excitatory steroids like sulfated steroids like pregnenolone but the inhibitory steroids like cholesterol or progesterone both major steroids precursors inhibiting or balancing excitation and inhibition and the body will correcting deficiencies as supposed for excitatory diseases like heart attacks and chronic heart failures as chronic kidney disease patients dead with heart diseases from low steroids such as low testosterone which indicating also other low steroids and as highest steroids levels in most

diseases associated with lesser heart diseases death and when supplementing some excitatory steroids derivatives like testosterone sometimes called anabolic steroids without needs and with excessive amount can cause heart attacks especially in heart diseases people

some modulators cannabis and opioids and tobacco and betel nut and jaborandi and chlorine dioxide and steroids and ionic minerals and non selective dopamine agonist and phytosterols and cholesterol

excitatory diseases like excitatory neuropsychiatric diseases like recklessness or hallucinations or psychosis or agitation or anxiety or hyperactivity like schizophrenia or seizures from toxins like infections stimulating the body causing excessive excitatory molecules and depleting inhibitory molecules and strongly comprehensively blocking inhibitory molecules factors like glycine and gaba and steroids production and if inhibitory molecules like glycine or gaba and steroids not supplemented and not detoxified toxins like infections like with chlorine dioxide and rarely

with hypochlorous acid sometimes will leading to agitated death like suicide or heart attacks or chronic heart failures

some processes like some immune system processes or insulin resistance need body inhibition and from excessive excitatory molecules

some inhibitory molecules like glycine wrongfully called nmda agonist but it is nmda modulator or nmda partial agonist blocking usual natural agonists molecules like glutamate effects and fully yielding partial effects and can be called nmda antagonist or nmda partial antagonist or nmda majorial antagonist and partial agonist as inhibiting body like agitation and decreasing high blood pressure and meaning sometimes when they said inappropriately agonist it is molecule replace usual bounded molecule and yielding no effects like antagonist or yielding partial effects like partial agonist have majorial antagonist or yielding more effects than usual natural molecule like true agonist which activating receptor fully yielding more than usual effects

they said glycine stimulating serotonin and after taking glycine memory improved like sign from increased serotonin and after waking restless legs back for minutes during waking but was not previous days and meaning the inhibitory molecule serotonin inhibiting or blocking excitatory molecule dopamine release or effects and mildly inhibiting noradrenaline as decreasing high blood pressure and meaning excitatory molecules like dopamine in addition to noradrenaline and glutamate and acetylcholine blocking serotonin and gaba and for excessive inhibitory molecules like serotonin called serotonin syndrome or gaba and meaning serotonin blocking dopamine and serotonin increasers less unsafe antipsychotics than typical antipsychotics and as they said in antipsychotics they blocked serotonin 5ht2a receptor as activating receptor blocking residual not blocked dopamine causing restless legs syndrome

they said cannabis decreasing high blood pressure like blocking beta and vasodilator

temporary laxatives encouraging colon to work without laxatives like guiding the colon to right path and meaning psychoactives like cannabis increasing laughing for depression like ptsd

saliva fluid or phlegm or mucus like runny nose induced from capsaicin or eyes fluids like eyes tears induced from onion or urine induced from diuretics such as sugars alcohols or diarrhea fluids induced from laxatives are alternatives than csf test for infections test

nmda blockers or calcium channels blockers both like agmatine resetting neurotransmitters firing and decreasing acquired addictive drugs tolerance which will making small amount drugs strong like first time and used for addiction diseases such as withdrawing diseases are antipsychotics less unsafe than typical antipsychotics

dopamine antagonists like some antiemetics not affecting serotonin are antipsychotics less unsafe than typical

antipsychotics as typical antipsychotics affecting many things such as serotonin unnecessarily

acetylcholine agonists like nicotine or some antiparasitics prevent and cure skin cancer as anticholinergics causing skin damage from sunshine meaning delayed repair

inhibitory molecules like excitatory neurotransmitters blockers like beta blockers and glutamate blockers and sodium channels blockers and calcium channels blockers are antipsychotics and for example some beta blockers not affecting other things are less unsafe antipsychotics and not causing agitation like restless organs called akathisia or restless legs syndrome or high blood pressure or breast cancer or forgetfulness and strange mental disability preventing most works or attention deficit hyperactivity disease or anxiety or depression or high prolactin and more safe than typical antipsychotics and in general for heart in excitatory diseases like most neuropsychiatric diseases are excitatory neuropsychiatric diseases like schizophrenia as they dead from heart and as beta blockers used for treating

restless organs and high blood pressure and chronic heart failure and as typical antipsychotics after weeks during ongoing wanted effects increasing excitatory molecules like noradrenaline and glutamate as the body substitute missing molecules like dopamine and serotonin with other available abundant molecules like noradrenaline and glutamate both the worst excitatory molecules in order as noradrenaline excessive in heart diseases like heart attacks and chronic heart failure and causing high blood pressure and restless organs both agitating with forgetfulness leading to recklessness like suicide and as glutamate excessive in seizures and causing high blood pressure and as typical antipsychotics after weeks during ongoing wanted effects increasing excitatory molecules like noradrenaline and glutamate causing long term worst restless organs called akathisia and high blood pressure both agitating with forgetfulness leading to recklessness like suicide as seen some did suicide and increasing heart diseases like heart attacks or chronic heart failure and also causing breast cancer and forgetfulness and strange mental disability both preventing most works and difficulty breathing and attention deficit hyperactivity disease and

anxiety and depression and high prolactin

sometimes looking too close from things not good misleading like looking to thing zoomed hundreds times not showing even colors meaning whilst looking to very deeper pathways the infections can collapse whole body in hours leading to death and if tested before will show hundreds of pathways disrupted

molecules abnormal in heart attack survivors low glycine and decreased nitric oxide and high adma and low protein z and low notch1 protein and low reduced glutathione and low 2 hydroxy 6 aminopurine and low 17a hydroxyprogesterone and low progesterone and low testosterone and excessive excitatory molecules and inhibitory molecules deficiency and high blood pressure

antipsychotics drugs blocking most inhibitory molecules factors like serotonin receptor 5ht2a and energy molecules factors as inhibiting nitric oxide in lungs and causing

pulmonary vasoconstriction

excessive excitatory state from inhibitory molecules deficiency like gaba indicates glutathione deficiency

pyridoxal phosphate with iron helped restless legs as pyridoxal phosphate factor for converting glutamate to gaba

parasympathetic nervous system called rest and digest activated with increasing like releasing inhibitory molecules which counteracting excitatory molecules and needed for rest and digest and meaning sometimes abnormalities in cells like diabetic ulcers or some tumors or degenerated organs not regenerated or not repaired from excessive some excitatory molecules like from some stimulants like toxins like infections or stress counteracting inhibitory molecules and depleting inhibitory molecules and as the body need inhibition to repair like sleeping or activating parasympathetic nervous system like with increasing

inhibitory molecules or detoxifying stimulants like toxins like infections causing excessive some excitatory molecules counteracting inhibitory molecules and depleting inhibitory molecules and correcting inhibitory molecules deficiency with increasing inhibitory molecules and as serotonin agonists like psilocybin reversed disability and meaning some people with some genetics abnormalities causing tumor after years from inhibitory molecules genes abnormalities and supplying inhibitory molecules help and meaning the imbalance like excessive some excitatory molecules with low inhibitory molecules most times for immune system some recognition and damaging processes like inflammation like attacking like autoimmune diseases and the imbalance like excessive inhibitory molecules with low excitatory molecules most times for immune system some recognition and repairing and detoxifying both sometimes need attacking activity from excitatory molecules and also for enriching or saturating or synthesis and relaxation as seen in obesity and as general balance needed fundamentally

inhibitory molecules or blocking signaling molecules like all neurotransmitters release with calcium channels blockers and nmda blockers or selectively excitatory molecules like noradrenaline blockers inhibiting tumor and inflammation like autoimmune diseases

excitatory molecules depleting energy molecules more than inhibitory molecules

taking molecules known to cause cerebral edema with sodium to prevent cerebral edema

glycine saturating and stimulating muscles like muscles synthesis as after glycine felt cold hydration in arm muscles

glycine as delivery vehicle to brain

calcium blood high not utilized for muscles contraction from oxytocin factors deficiency like not produced or not

released like no orgasm or glycine deficiency

someone said almost not detectable tingling in heart for minutes after eating salty food and sex and stress during laying flat and dehydration and early glycine like from heart repairing as glycine given last night and molecules like oxytocin released during orgasm stimulated heart repair and valves contraction as tingling in breast happened during breast repair from tumor and as inflammation happened during detoxifying toxins and as tingling in hand nerves during nerves transmission and meaning heart repairing factors like nerves or receptors not activated since long time or glycine and sex stimulated residual serotonin release and depleted and needed for heart and low serotonin storage and production the body unused not adjusted yet in addition to malnutrition like low serotonin substrates or transient weak heart blood pushing to passing valves contracted as unused not adjusted yet or energy molecules deficiency or low blood pressure like from malnutrition or glycine causing ejaculation depleting more semen molecules including more glycine than usual

causing more glycine deficiency than before as high blood pressure returned or poisons from delivered packaged food from the united states of america government as they have the ability and they did that before and meaning sometimes tingling happening very rarely during organs repair and sometimes no difference between repair tingling and heart emergency

symptoms from high blood pressure from inhibitory molecules like glycine deficiency head pressured and very heavy and will increasing more like about to rupturing during positioned forehead on floor called prostration and eyes high pressure not happened before years when was teenager or childhood and eyes shaking increased more during closed eyes and strange vision motions like not stabilized and body shaking

heart attack after stimulation from excessive excitatory signaling molecule release response caused from inhibitory molecules deficiency as reflexes diseases and anaphylaxis histamine release and as liver attack following brief shock

from excessive glutamate counteracted gaba and the shock corrected balance or the shock caused deficient liver to release residual molecules like glycine or the shock induced from deficient liver with releasing residual insufficient molecules with causing liver pain as deficiency sign during correcting balance and meaning deficient heart released residual molecules like insufficient inhibitory molecules and responding with pain

some inhibitory molecules like oxytocin contracting muscles like uterus or excitatory molecule like unique excitatory molecule not increasing blood blood pressure or agitating as exciting to sex during massage or balanced excitatory and inhibitory molecule or as general any transmitter take space in body counteracting other transmitters and was inhibitory molecule as decreased other strong excitatory molecules and unique or mild excitatory molecule not like strong excitatory molecules like noradrenaline activating beta receptors and same agmatine inhibitory and excitatory for addiction both like replacing body battery with green battery have balanced excitatory

and inhibitory effects

some inhibitory molecules like histamine excessive release anaphylaxis from other inhibitory molecules deficiency like glycine deficiency causing excessive response like reflexes diseases as every inhibitory molecule work more selectively in organ like gaba for head attacks called seizures and glycine for heart attacks

some diseased whiter people
melaningenesis decreased
excitatory molecules automatic release decreased need stimulation
inhibitory molecules automatic release increased
memory increased
steroidogenesis decreased
phenolics increased
phenolics derivatives increased
quinones increased
hydrogen peroxide increased
potential of hydrogen elevated

bicarbonate elevated
low iron
low calcium
hypovitaminosis d
hypocalacemia
hypermagnesemia

some diseased darker people
melaningenesis increased
brain matters increased
excitatory to inhibitory steroids increased
excitatory molecules automatic release increased
inhibitory molecules automatic release decreased
overstimulation
memory decreased
aging increased
steroidogenesis increased
phenolics decreased
phenolics derivatives decreased
quinones decreased
sunshine

normovitaminosis d

hypercalacemia

hypomagnesemia

lecithin increased
exercising
socializing
cells solider
hair thicker

always two neuropsychiatric diseases types such as excitatory schizophrenia which usual as they dead from heart attack or inhibitory schizophrenia and for excitatory schizophrenia treated with inhibitory molecules and inhibitory schizophrenia treated with excitatory molecules

some doctors who prescribe high blood pressure drugs to their patients dead from stroke or heart attack from high blood pressure from inhibitory molecules deficiency like glycine deficiency and agmatine deficiency and estrogen deficiency and t3 deficiency and liquid lipids deficiency both depleted from stimulants like stress and continuous toxins like stealth infections almost always undiagnosed as one third doctors have colon diseases like constipation or irritable bowel both detoxified with chlorine dioxide and

hypochlorous acid even if you are doctor and know the diseases knowing the diseases not meaning you will not get one

glycine is sugar or glucogenic amino acid or protein sugarlated as sweet and increasing fluids to brain like sugars alcohols mannitol and glycerol increasing fluids retention and helping heart like sometimes ribose and modulating eyes pressure and blood pressure and insulin

symptom from inhibitory molecules deficiency elevating excitatory molecules sharp muscles contractions in head during thinking

glycine sip decreased hearing heart beats and high blood pressure and agitation and organs shaking like eyes and fingers tremors when pointing to above and increased fluids to head and relaxed muscles and head and decreased eyes pressure

genes proteins mutations like dystrophin same cancer genes proteins mutations

almost all molecules like proteins signaling other molecules like proteins with gases or radiations or waves

toxins like infections causing genes mutations and reversing genes mutations

dilated cardiomyopathy from abnormal circulation factors not circulated leading to blood accumulating in heart

fatty heart tissue same fatty liver

toxins like infections can cause temporary genetic mutations showing pseudo positive genetic tests while that infections undiagnosed causing diseases and also genetic mutations treatable as tp53 gene mutation in blood cancer reversed with pretreatment and stem cells transplant and

immunetherapy and also chlorine dioxide activating mutated tp53 gene

some heart attacks from overstimulation depleted inhibitory molecules causing heart muscles like valves contraction and meaning that heart attack have inverse relationship with valve regurgitation not happening at same time

left side organs or left side organs nearest to heart not get cancer and right side get cancer as left side carries more oxygenated blood and delivered to nearest left side organs prioritively with strong blood flow pushing reaches cells and meaning right side abnormalities from insufficient blood oxygen from oxygen deficiency from oxygen factors like respiratory tract and heart and circulation deficiency causing decreased blow flow to cells and blockages like clots in deep vessels

simulation activities addiction ignored with activities and

mental stimulation addiction ignored with mental

symptom from toxins like infections sudden stimulation episodes like starling events even waking during sleeping

hair loss from signaling molecules deficiency like excitatory molecules deficiency and inhibitory molecules deficiency and high blood pressure and deficiencies and ptms molecules deficiency and blood sugar diseases and insulin diseases and obesity

they combining drugs like vitamin k with retinoic acid to cross brain blood barrier

they said sglt2 helped heart failure like from inhibiting body as increasing infections and for autoimmune diseases

cardioprotectives also neuroprotectives

inhibitory molecules or energy molecules

inhibitory molecules also energy molecules

heart attack after eating or showers from overstimulation and inhibitory molecules deficiency as heart attack caused with screaming and as heart attack caused with showers and as allergens are stimulants increasing histamine and as stimulants causing heart attack

generally during agitation caused from chronic diseases most things even nutrients in high dose can cause abnormalities as acutely diseased people ingested multiple vitamins and minerals in oil caused mild shock

minerals like fulvic acid lowered agitation or high blood pressure caused from neutralizers molecules deficiency and inhibitory molecules deficiency and liver diseases all caused from toxins like infections

some autoimmune diseases from organs diseases like heart diseases like increasing signaling molecules like noradrenaline

they said multiple sclerosis worsing in evening from increased signaling molecules like neurotransmitters as they increasing gradually after awaking

some sickness with weakness like sleep waking weakness like half dead or some chemotherapy side effects from biostimulants deficiency like steroids and signaling molecules deficiency like transmitters deficiency like neurotransmitters deficiency as signaling molecules increased gradually after awaking help

vasodilators before detoxifiers will increasing detoxifiers delivery to cells increasing detoxifiers contact with toxins and drawing blood from organs or cells to blood vessels as needed in vasodialtion state which increasing blood amount in vessels increasing detoxifiers contact with toxins

and helping diseases symptoms like toxins like amyloid accumulated in cells

heart attack after drinking water causing vasodialtion in digestive tract or heart and diseased heart causing attack as slowly correcting blood flow

symptom from liver diseases like from toxins like infections and neutralizers molecules deficiency and inhibitory molecules deficiency is brief shock or brief seizure like followed with pain in liver or just pain in liver after ingesting some food like yeast extract or glutamate or plants protein like bar or drink or sugars alcohols

symptom from neutralizers molecules like lipids deficiency is sharp painful scratched throat during coughing

diarrhea patients not dead from water deficiency but depleted neutralizers molecules like digestive tract fluids and inhibitory molecules and overstimulated

most things meaning heart attack after eating from neutralizers molecules deficiency and inhibitory molecules deficiency and toxins like infections and all can causing blockages like plaques with causing liver diseases and pancreas diseases and correcting neutralizers molecules deficiency and inhibitory molecules deficiency and detoxifiers like chlorine dioxide help

some heart diseases like heart attack after eating from toxicated heart receptors like blocked steroids receptors

heart attack after eating or showers from energy molecules like steroids deficiency like in drinking water for neutralizing esophagus cells back to normal like with secreting fluids like saliva fluid neutralizing cells and correcting osmolality and temperature and increasing blood flow after water drinking as most diseases like ckd death have inverse relationship with steroids levels meaning lowest steroids levels causing death and also meaning different steroids

are factors for secreting fluids like sweating for diseases like cancer and brain diseases like brain fluids deficiency diseases allowing toxins accumulation like alzheimer

liver part from immune system as hiv late stage causing immune deficiency

healthy inhibitory molecules factors and neutralizers molecules factors masking toxins like infections as some people have hiv for tens of years without symptoms

toxins like infections like parasites dead from signaling molecules like inhibitory molecules or excitatory molecules like transmitters like acetylcholine agonists or acetylcholine antagonists as anticholinergics and antihistamines damaged parasites and meaning body deficient with signaling molecules especially detoxifiers signaling molecules systematically like in gut will affected more from abnormalities like toxins like infections or constipation or tumor and meaning synthetic disinfectants like

antiparasitics targeting pathways in parasites similar to humans which accumulating toxins

what causing sweating or hypersalivation is neurotransmitters agonists like acetylcholine agonists and for cancer and infections like parasites

what causing eyes conditions like diplopia from psychedelics like acting as serotonin agonists for disabilities like eyes disability

electricity for toxins like infections as antiparasitics stimulating parasites nervous system until inhibitory molecules depleted totally yielding extreme stimulation state without any inhibition causing disabilities like paralysis leading to death and as inpt for infections and meaning inhibitory molecules for disabilities as inhibitory molecules like serotonin agonists like psychedelics or psychoactives like psilocybin for disabilities

antiparasitics acetylcholine agonists stimulants like nicotine helped cancer

heart attack after hours from showers from depleted osmolality molecules like gut osmolality molecules like neutralizers molecules and inhibitory molecules to colon as causing laxative effects and soften stool and after that causing heart attack or the heart trying replenishing osmolality molecules using vagal activation like for counteracting vasoconstriction and increasing blood flow and stimulating digestive tract fluids secretions but was unable and about to stop during vagal activation attempting or prolonged vasoconstriction or prolonged vasodilation from showers causing heart to push more blood and get tired causing heart attack

high dose detoxifiers like chlorine dioxide in newly acquired toxins like infections and low dose in chronic toxins like infections

most diseased people with heart diseases have constipation from osmolality deficiency like digestive tract osmotics molecules deficiency like neutralizers molecules like lipids like bile acids deficiency and inhibitory molecules like vasodilators deficiency as osmotic laxatives for constipation

they said cardiovascular response to drinking water is that drinking water activating autonomous nervous system parted to sympathetic nervous system and parasympathetic nervous system and somatic nervous system and meaning stimulating nervous system for period which can decreasing inhibitory molecules as they have inverse relationship and depleting inhibitory molecules and in already stimulating body like from toxins like infections with inhibitory molecules deficiency will causing agitation or heart attack from increased stimulation and inhibitory molecules deficiency as inhibitory molecules needed for heart or will causing heart attack like seizures from depleted gaba and flooding calcium from brain hypoxia and other nutrients different stimulants like eggs causing heart

attack more than water or water trying to stimulating parasympathetic nervous system but no inhibitory molecules causing agitation or heart attack and they said cardiac vagal activation after water drinking counteracting elevated sympathetic tone resulting in no change in blood pressure and meaning inability to inducing cardiac vagal activation or cardiac vagal activation deficiency causing high blood pressure or heart attack

water intoxication from orally water ingested neutralized neutralizers like digestive tract fluids like stomach acid causing heart attack

inhibitory molecules deficiency diseases like excitatory diseases with sudden high blood pressure from heart diseases like from toxins like infections inflamming heart continuously causing impaired blood pressure from pushing blood abnormalities

flu like symptoms like sickness like fever and agitation and

continues for days with sickness and sharp painful scratched throat with repeated coughs and sudden involuntary movements and sudden involuntary voices and memory abnormalities followed with precursory heart attack symptoms like jaw pain or jaw paralysis episodes and breathing shortness during sleeping and sudden episodes during day with sudden low blood sugar and sudden low blood pressure corrected with eating and left arm pain for hours caused from toxins like infections like streptococcus or staphylococcus aureus

swelling tonsils indicating toxins like infections affecting body like immune system like lymphatic system and when tonsils removed will not indicating abnormalities and diseases like brain diseases happened without infections sign meaning lymphatic system like tonsils is biomarker

digestive tract fluids like bile acids needed for steroids synthesis in adrenal

symptom from inhibitory molecules deficiency or stimulated nervous system or high blood pressure all like from toxins like infections is when eyes closed eyelids shaking

heart attack during eating from diseased heart like from toxins like infections undiagnosed or blockages like plaques called atherosclerosis or blood clots or coronary spasms like heart not able responding to ingested food like with pushing blood or increasing blood flow or secreting heart fluids or secreting digestive tract fluids like stomach fluids or excessively responding to food as in inflamming state

plaque is not cholesterol but cholesterol waste derivatives like ldl not detoxified like from neutralizers molecules deficiency as ingested cholesterol metabolized first in liver and as fish oil which contains neutralizers like solvents like liquid lipids and cholesterol lowering ldl or bad cholesterol

enzymes released from heart after heart attack to be repaired in blood

enzymes released from heart after heart attack to support heart as energy or preventing heart attack

enzymes released from heart after heart attack like brain hypoxia flooding calcium and detoxifiers help

stress depleting inhibitory molecules more than salty food

direct receptor agonist is active molecule binding to receptor which activating receptor continuously as dosed amount and direct receptor antagonist is inactive molecule binding to receptor which inactivating receptor and natural biomolecule like dopamine is remote molecule continuously binding to receptor and remotely from signaling molecule activated or deactivated and replaced shortly than receptor or not continuously binding to receptor but need to binding everytime want activating and

have the flexibility to binding and activating and unbinding and deactivating as have storage with vehicle called reuptake factors and as exogenous agonists exploiting binding absence and binds and also the body prioritizing exogenous agonists as body see another molecule similar to endogenous molecule binding will stopping not forcing its actions and also synthetic exogenous agonists strongly binding with receptor more than endogenous molecule not allowing endogenous molecule from trying to binding competitively but other exogenous agonists can binds and meaning to decreasing dopamine lowering storage with lowering production or accelerating breakdown or and the opposite for increasing and meaning molecules modulators like molecules binding or molecules agonists or molecules antagonists like direct or indirect steroids agonists for diseases like cancer

vessels diseases from abnormalities like vessels swelling called vessels aneurysm like in abdominal aorta or blockages like in celiac artery or organs like heart or blockages in head or from toxins blocking factors in organs

like heart causing like regurgitation

vessels diseases like blood vessels diseases like abdominal aortic aneurysm from deficiencies as food like hot food in belly absorbed through blood vessels inflamming nearest blood vessels and depleting blood vessels molecules like blood vessels neutralizers molecules not corrected from systematic neutralizers molecules deficiency as they treated abdominal aortic aneurysm with zinc and meaning neutralizers molecules for vessels diseases or from toxins like infections

toxins like infections causing vessels diseases like blood vessels diseases also called as vascular diseases or also called with the heart together as cardiovascular diseases and some symptoms pulsating organs like belly or neck and feeling or hearing the heart beats and other heart diseases as toxins like infections like stimulating body like activating excitatory factors prolongedly like binding and activating noradrenaline receptors continuously and damaging protein synthesis factors with ptms like methylation and damaging

lipids synthesis factors and depleting inhibitory molecules and blocking inhibitory molecules factors and blocking sleep molecules factors and depleting neutralizers molecules and inflamming cells like swelling vessels and acutely toxicating organs like heart as some infections causing death with stopping heart soon after infected but many people ignoring them

blood pressure is driven from signaling molecules like transmitters like excitatory neurotransmitters like noradrenaline stimulating heart to push blood

some sympathetic nervous system stimulants like lipids like olive oil with vasodialtion effects or inhibitory parasympathetic nervous system stimulants balancing body stimulation

inhibitory molecules like serotonin for memory like fetching memories and temporary memory called cache memory and mood stabilizers as excitatory molecules blocked with

antipsychotics increasing inhibitory molecules as both they have inverse relationship and increased memories fetching or living mostly in past including latest past not present or future and meaning excessive inhibitory molecules blocking future vision like future consequences as seen in addicted criminals and meaning excessive inhibitory molecules blocking future vision like hope or future goods or nextgoods or cominggoods leading to inhibited hopegenesis causing despair like depression and ptsd and increasing suicide in excitatory molecules blocked with antipsychotics chronically people or excessive inhibitory molecules people both suicide less than excessive excitatory molecules people and as when excitatory molecules blocked reversed increased living in latest present or future mostly and sometimes not saving some events to memory correctly and decreasing need or not encouraging or harding for remembering also known as fetching past memories and meaning excessive excitatory molecules blocking learned lessons in past leading to like recklessness and increasing suicide in excessive excitatory molecules people more than excitatory molecules blocked people or excessive inhibitory molecules people and also as

some excitatory molecules causing high blood pressure increasing agitation and decreasing need or not encouraging or harding for fetching memories and as inhibitory molecules like glycine decreased high blood pressure and improved memory and meaning other way to decreasing excitatory molecules with inhibitory molecules and the opposite for inhibitory molecules

tumor cells like oil and water not mixed except without air and meaning oxygen deficiency in tumor cells causing lipids to mix with water and what separating water from will help

the body can be addicted to stimulants like infections and agitating after infections detoxified

neutralizers like solvents like dmso binding toxins to liquids like mixing oil and water and allowing exertion

neutralizers molecules like lipids for dry acidic empty liver

without lipids which in opposite to fatty liver as not all liver diseases supposed fundamentally to be called fatty liver as usual mistaken like alcohol liver not supposed to be called fatty liver as alcohol neutralizing liver which defatting liver and liver start suppurating and rarely stored tiny lipids leaking from damaged cells which also increased permeability and both mostly externally and both mistaken as fatty liver and meaning no excessive lipids affecting liver even in obesity people but from lipids deficiency and as the circulating lipids not enough for organs like liver and prioritized for blood and the lipids deposited in other organs not utilized effectively for other organs like liver fundamentally in addition to liver diseases as liver is lipids factor and as liver injury treated with bile acids and they said bile acids activating fxr receptors for liver injury and regenerating liver

chronic neutralizers molecules like lipids like liquid lipids like bile acids fluids and like liquid triglycerides and steroids deficiency from liver disease like from toxins like infections impairing neutralizers molecules factors like lipids

synthesis

acidic tumor cells like acidic liver and neutralizers molecules like lipids like bile acids and lecithin and sugars like honey for dry acidic empty liver without lipids and for cancer

organ pain like from vessels diseases from toxins like infections swelling vessels or nearby cells or from other toxins or blood clots or fats deposits accumulating in blood vessels all causing blood vessels contraction leading to organ diseases like belly pain

music stimulating nervous system and reciting quite words not buzz words not stimulating nervous system but parasympathetic nervous system

giving detoxifiers like chlorine dioxide intravenously safest and more effective than transdermally or transdermally like topically like with delivery vehicle like solvents like dmso

penetrating cells safest and sometimes more effective than intracolony or intracolony like enemas safest and more effective than orally for most diseased people but rarely need orally for some digestive tract diseases and why not orally all times as generally any sophisticated molecule even mint orally depleting neutralizers molecules like digestive tract fluids and inhibitory molecules like glycine and in very rare people diseased like some heart diseases people like heart attacks survivors having neutralizers molecules deficiency and inhibitory molecules deficiency both not corrected yet will damaging or will not damaging and as orally ingested solution will be neutralized in digestive tract fluids like hydrochloric acid fluid and liquid lipids like bile acids fluid and neutralized in liver decreasing efficiency as usual in some patients corrected with adding enemas

lipids deficiency worst than lipids overload

any worker stressed looks tired from inhibitory molecules deficiency and neutralizers molecules deficiency and either

when they are acute deficiencies leading to stroke or heart attack or seizures or death

bleeding in organs like bleeding in head from stroke like from blood clots blockages increased the nearest flowing blood pressure which damaging blood vessels causing blood to leaking from vessels walls to cells or from blood clots blockages causing the other cells flooding blood inappropriately like calcium flooding in brain hypoxia or from toxins like infections eating cells or inflamming cells which called encephalitis both causing swelling including lymph nodes or even not swelling all leading to bleeding or from toxins like infections since long time damaging head blood vessels and brain blood barrier leading to bleeding or from toxins like infections or stress like thinking or tightening head all depleting inhibitory molecules and neutralizers molecules causing high blood pressure which damaging like weaken and rupture blood vessels causing blood to leaking from damaged vessels walls to cells and called bleeding

some neutralizers molecules like lipids like solid lipids like lecithin like lecithin powder utilizing other neutralizers molecules like solvents like liquids like liquid lipids like bile acids as taking olive oil after lecithin soilds helping agitated body from neutralizers molecules deficiency and as saturated fats depleting neutralizers molecules causing heart diseases as neutralizers molecules needed for heart

ptsd like anxiety from stimulants like stress like thinking but silent anxiety and as autism from stimulants like toxins like infections

sometimes acute inflammation and autoimmune diseases from neutralizers molecules deficiency like alkaline neutralizers molecules deficiency like lipids deficiency like steroids deficiency as the inflamed cells like from injuries like from toxins like infections wanting neutralizers molecules and the neutralizers molecules deficiency systematically will leading to more inflammation and the inflamed cells will transforming to different chemical identification like denatured protein and attracting

destructive immune system as cells not recognizable normal to immune system and called autoimmune diseases and also neutralizers molecules deficiency systematically will causing spontaneous cells inflammation and the cells inflammation elevated with increased neutralizers molecules deficiency as agitation elevated with neutralizers molecules deficiency and continuing the inflamed cells will transforming to different chemical identification like denatured protein and attracting destructive immune system and also neutralizers molecules deficiency like lipids deficiency causing defective protein synthesis like during protein synthesis no ptms like no lipidation and the synthesized defective cells becomes dehydrated leading to cells inflammation or not dehydrated and the cells becomes inflamed or cells not inflamed all attracting destructive immune system

how toxins like infections depleting inhibitory molecules as the toxins like infections are stimulants and also depleting neutralizers molecules like lipids like steroids as the inflamed cells need repair and hydration as usual inflamed

cells dehydrated and neutralizers molecules like lipids like steroids used during repair and also toxins like infections contaminating body fluids like neutralizers molecules like liquid lipids like digestive tract fluids like bile acids fluids and especially from infections residing in digestive tract and leading to exerting body fluids like defecting as diarrhea or soften stool or increased urination and exerting body fluids like neutralizers molecules leading to heart attack or seizures

organs pain or organs paralysis both often from deficiencies as jaw pain with paralysis both like from toxins like infections causing deficiencies like inhibitory molecules deficiency and neutralizers molecules deficiency like lipids deficiency and both secondarily caused from malnutrition and as lips shaking like from stimulants like caffeine causing deficiencies like potassium deficiency

unexplained sickness from toxins like infections stimulating body depleted inhibitory molecules and depleted neutralizers molecules

dried black blood ear wax clots from impaired lipids factors like lecithin like ear wax hydrating factors like from no enough fluids in head or lipids deficiency

symptom from acute lipids deficiency is dried black blood ear wax clots like from some residual lipids burned in brain increased like with stress like thinking or eating spices or excessive sex or showers or sometimes the dried black blood ear wax clots sign from increased lipids burning in brain like from stress like toxins like infections or thinking or eating spices excessive sex or showers with lipids deficiency or without lipids deficiency

symptom from toxins like infections like causing encephalitis is dried black blood wax clots like from ear bleeding

most nutrients generally or oxidants minerals like iron decreasing lipids like exerting lipids or utilizing lipids in

body as taking iron in lipids deficiency worsing and taking lipids after iron in lipids deficiency helping and also some antioxidants decreasing lipids and as lipids worsing akathisia from antipsychotics and iron helping akathisia and other movements diseases like restless legs syndrome augmentation and meaning impaired lipids factors rarely with lipids deficiency in movements diseases and meaning not giving molecules decreasing lipids or molecules utilizing lipids both like iron in diseases like heart attack survivors especially thin people or seizures people

taking some nutrients like minerals without other nutrients like lipids will never curing but worsing you will see in most diseases like in usual hidden acute malnutrition like from stimulants like toxins like infections overstimulating body which depleted inhibitory molecules and depleted neutralizers molecules both needing nutrients to replenishing but no nutrients intake will called malnutrition and toxification like infections

when ingesting lipids increasing agitation it is clarifying

affected factors like factors processing lipids related to preexisting diseases like akathisia

iron overdose causing circulation collapse leading to heart attack

high iron circulating causing diseases from impaired protein synthesis like impaired tranferrin synthesis like from protein intake absence

inhibitory molecules like lipids like olive oil was enough for overstimulating or agitating increasing with eating or stress and lowered blood pressure prevented heart attacks from reoccurring in heart attack survivors or malnutrition people like thin people and with neutralizers molecules and disinfectants and as high lipids diet helping seizures people

heart attacks just like head seizures both from toxins like infections stimulating body causing inhibitory molecules deficiency like glycine deficiency in heart attacks and gaba

deficiency in seizures and meaning inhibitory molecules like high lipids diet for heart attacks not some heart diseases with hyperlipidmia in some obesity people

iron accumulation in blood or cells from nutrients processors molecules deficiency or neutralizers molecules deficiency or inhibitory molecules deficiency or causing these deficiencies

iron caused constipation from depleting nutrients processors molecules like energy molecules like signaling molecules like glycine like from heart secreted like needed for bowel movements and as chelated iron with glycine not causing constipation and as non chelated iron ingested causing heart attack in some heart attack survivors and as generally iron accumulation from nutrients processors molecules deficiency like from high amount iron depleted them causing ferroptosis or chronic organ failure

stress depleting inhibitory molecules like glycine causing

head muscles ache and iron accumulation in brain causing ferroptosis

someone drinked cold water and increased pain in left arm and overstimulated or agitated shaking and decreased cold body temperature more low like pain in left arm from low body temperature or thermogenesis molecules deficiency or neutralizers molecules deficiency like hydrochloric acid deficiency or bile acids deficiency both diluted with cold water causing low body temperature

some heart diseases people transplanted heart was from toxins like calcification or stealth infections and detoxifiers like chlorine dioxide help and why transplanted heart organ not affected from toxins like infections as the immunosuppressants suppressing immune system prevented attacking transplanted heart contains infections causing immune system attack organ too called autoimmune diseases or the infections need time to damaging transplanted heart like previous heart or the previous heart was toxicated with other toxins like or the

body was diseased not produced unusual needed molecules for heart regeneration and the transplanted heart comes with sufficient deposited molecules like hormones lasting for years

symptoms before heart attack jaw pain and breathing shortness during sleeping and episodes during day and left arm jerks or excessive reflexes prolonged arm pain and sometimes from toxins like infections especially if initiated with flu like symptoms or from comprehensive malnutrition like from decreasing weight molecules

prolonged pain in one arm like left arm from comprehensive malnutrition like from essential and special nutrients like protein and fulvic acid and natural multivitamin and lecithin and olive oil and b6 intake absence and eating excessive spices or from neutralizers molecules deficiency or inhibitory molecules deficiency or in addition to toxins like infections or the pain in left arm happening for days before heart attack and sometimes with jaw pain and breathing shortness during sleeping and episodes during day since

days or from already happened heart attack both like from comprehensive malnutrition like from essential and special nutrients intake absence and eating spices or neutralizers molecules deficiency or inhibitory molecules deficiency as heart attack chance increased with stimulated body like from stress or toxins like infections or from excessive sex and showers and complicated or initiated with toxins like infections or from stress or prestroke or stroke both especially if the pain in arm brief and sharp not continously

symptom from inhibitory molecules deficiency and neutralizers molecules deficiency pain in one arm

disabilities like eyes disability or ears disability from molecules deficiencies or toxins like infections not allowed healthy cells synthesis and correcting deficiencies and detoxification and reactivating receptors only activated rarely like in childhood like using injuries diseases molecules like spinal cord injury molecules like healing plants and disabilities molecules like serotonin agonists like psilocybin will regenerating disabled organs like ears cells

almost all not relaxing diseases like movements diseases like jerks diseases like seizures and tics diseases and addiction diseases and anxiety and headaches diseases like head muscles ache from inhibitory molecules deficiency like from diseases like toxins like infections stimulated body depleted inhibitory molecules

chronic kidney disease tubular blocked with toxins like kidney stones causes like calcium calcification on tubular cells blocking molecules from passing

smelling molecules and tasting molecules for cancer like lung cancer and throat cancer and brain cancer

toxins like infections symptom causing decreased tasting sense and smelling sense not like strong smelling sense in childhood meaning what is last time you strongly smelled anything other than chemicals like strong natural juices smells if not smelled strongly like in childhood exactly you

are toxicated like with infections

molecules released during eating like adrenal molecules like adrenaline mostly released in protein or sugars ingestion as when protein or sugars ingested blood sugar elevated or blocking ongoing insulin release or insulin effects and when ingested lipids or water not elevating blood sugar and as adrenaline releasing other partners molecules released during eating like stored glucose and steroids in anaphylaxis people

molecules like adrenaline released during eating nutrients or addictives for addiction diseases like addiction withdrawing diseases

addiction withdrawing diseases from body transmitters deficiencies not transmitting signals between cells as supposed and elevating any transmitters help

when the body see another stimulants suffocating the

needed body functions the body decreasing biostimulants or rescuing sensors production and the sensors same like factors releasing stored glucose in low blood sugar and when the usual stimulants absent the body becomes abnormal as it is not have enough endogenous sensors or biostimulants produced or their releasing inhibited and also not have enough molecules like from molecules substrates deficiencies like neurotransmitters substrates deficiencies as the addicted used to elevating the addictive chemicals dose because usual low dose yielding low neurotransmitters from neurotransmitters substrates deficiencies and as the stimulants activities like sex start with one time enough for day and chronically resulting in more sex times per day because first orgasm in day not released enough molecules like before time suffocating body and the cause from molecules deficiencies like from molecules substrates deficiencies or need more time without sex to replenishing and meaning unavailable excessive sensors or biostimulants needed to raising neurotransmitters normally just like the used elevated addictive dose when there is no enough body molecules like from molecules substrates deficiencies or need time to

replenishing and when directly stimulating production or release with chemicals or supplementing help for addiction diseases like addiction withdrawing diseases

addiction withdrawing symptoms like low blood sugar the body have stored glucose but not releasing except if the person eat food like protein or sugar and this happened like from molecules deficiencies like same molecules like adrenaline released during eating deficiencies as they immediately elevating blood sugar and meaning in addiction withdrawing diseases the body have needed molecules but not releasing and meaning low blood sugar relapses diseases like diabetes people are addicted relying on sugar or molecules elevating sugar

neutralizers like hypochlorous acid causing hidden malnutrition relapses like energy molecules deficiencies like low blood sugar or low blood pressure all appearing as weakness and respiratory symptoms episodes without strong hungriness feeling for needing to eating in some diseased people and meaning giving nutrition like eating

enough like protein and sugars and salty foods and other malnutrition relapses nutrients molecules after hypochlorous acid for some diseased people

diseased kidney tubular not transferring also known as not secreting waste molecules like hydrogen ion or hydronium from blood to tubular fluid to be detoxified as the tubular fluid will be urine and meaning those not secreted molecules causing tumor lysis syndrome

denervating and cleaning patient organ like kidney and transplanting for kidney diseases like ckd as denervating and transplanting causing nerves regeneration and as diseased kidney tubular secretion impaired not transferring waste from blood to tubular fluid like kidney paralysis

overstimulating or agitating after ingesting food like lipids or sugars from inhibitory molecules deficiency like inhibitory neurotransmitters deficiency like glycine and gaba and gaba agonists like taurine and glycine agonists like

taurine and selective inhibitory neurotransmitters deficiency like some defective dopamine receptors like from toxins like blockers like antipsychotics and that default neurotransmitters deficiencies substituted with excitatory neurotransmitters like noradrenaline and histamine and glutamate unsuitable and inhibitory molecules deficiency causing molecules spike like nutrients processing molecules spike like neurotransmitters spike or adrenaline spike or blood pressure spike or sugar spike or insulin spike and from neutralizers molecules deficiency

toxins like antipsychotics impairing senses like impairing attention like impairing hungriness feeling for needing to eating in severe malnutrition state causing no needing to eating and weakness and respiratory symptoms

toxins like uremic toxins binding with proteins like albumin will damaging albumin which the denatured albumin will not functioning as supposed but working toxically in blood and parts of the body not recognizing denatured albumin as albumin and most blood tests not detecting denatured

albumin but showing as false low albumin and even giving albumin will denaturing shortly as uremic toxins binding with albumin continuously and most blood tests will still showing false low albumin and meaning similar in movements diseases like chronic akathisia from toxins like antipsychotics

hydrolyzing enzymes is signaling molecules as they signaling other molecules to breakdown

molecules like short amino acids is solutions infused gases working as gases like signaling molecules

what dissociating bounded proteins or protein bonds like signaling molecules like gases like hydrogen or neutralizers like chlorine dioxide or hypochlorous acid or bicarbonate or short amino acids or enzymes or minerals for molecules bounded with toxins like proteins bounded with toxins like proteins receptors bounded with blockers or proteins bounded with uremic toxins which causing death in chronic

kidney disease

hemodialysis not detoxifying all toxins like proteins in blood like large molecules with large molecular weight or small molecules with very low molecular weight and diseased kidney acutely not detoxifying large molecules with large molecular weight like they are not broken down like from kidney enzymes deficiency like glutathione or localized kidney gases production deficiency like hydrogen peroxide deficiency

disabled organs like kidney in ckd is from nervous system diseases like neurological diseases called neurogenic kidney disease as lung paralysis can be from neurological diseases called neurogenic lung disease and why the transplanted kidney working not connected to nervous system or neurological system properly like nervous system or neurological system not able to controlling transplanted kidney properly

ckd is blocked vessels like capillaries vessels with toxins like clots and anticoagulants and neutralizers like chlorine dioxide helping

protein and protein factors like protein metabolism producing protein metabolites like urea required for exerting excess fluids called fluids retention and meaning water retention or anuria or abnormal urination like in kidney diseases like ckd is from impaired protein metabolism like happened in kidney from kidney enzymes deficiency or toxicated kidney appeared as proteinuria or this ckd anuria type are not from impaired protein metabolism like urea deficiency and already have enough protein metabolites like urea but kidney still not exerting fluids or toxins effectively from kidney diseases which also causing proteinuria which indicating impaired protein metabolism

neuropsychiatric diseases like delusions diseases from molecules deficiencies as half waking up causing multiple delusions symptoms like dissociation from reality and dyslexia like known calligraphy in primary language are on

the room front wall changing different quickly like digital objects moving quick vertically and stopping to choosing single object like in lottery like dreaming world mixed with reality somewhat but after shocking with jerks during waking up like stress molecules like fear or sex or exercising molecules releasing like hormones like adrenaline releasing or adrenaline injection and steroids like cortisol releasing and neurotransmitters releasing which those exercising molecules releasing deficient or not deficient in seizures people causing seizures when they trying exercising and continuing after waking up following shocking with jerks everything back to normal and as intoxicated people like sedated people like during hospitalization have delusions symptoms like living in third dimension and weird talking

immune system learned that the body to be stimulated from external stimulants not body stimulants and immune system molecules for withdrawing diseases or quitting addiction

healthily elevating what stimulants like alcohol elevating like neurotransmitters and body temperature for withdrawing diseases like alcohol withdrawing disease or helping quitting addiction

stimulants withdrawing diseases happened when body used to breaking down high levels molecules like neurotransmitters and hormones and steroids and when those molecules not high from stopping stimulants the body already have high levels breaking down molecules stored and used to producing high amount breaking down molecules and that high levels breaking down molecules will acutely still breaking down that low levels molecules like neurotransmitters and hormones causing withdrawing diseases and meaning inhibiting breaking down or metabolizing factors for body molecules like hormones and neurotransmitters or chemicals like drugs which the factors like cytochromes like cyp450 like using stimulants antidotes like cbd or neurotransmitters breaking down enzymes like using mao inhibitors or the opposite stimulating breaking down or metabolizing factors for

withdrawing diseases or quitting addiction or diseases with same symptoms like hallucinations diseases and seizures and anxiety and depression

hallucinations diseases like delirium from deficiencies like neurotransmitters like dopamine deficiency even if they are excited as body using another inappropriate excitatory neurotransmitter for dopamine deficiency from body natural stimulants deficiency as stimulants withdrawing diseases like alcohol withdrawing disease causing delirium tremens

fluids drawn to digestive tract after ingesting food to neutralizing food as possible and neutralizing cells around to keeping environment clean and neutral as almost all body alkaline

toxins like infections using body equipments to duplicating

parents toxins like infections always transmitted to born or lactated children and sex partner as someone showing

tuberculosis like their parents but after tens of years and meaning knowing family diseases history helping diseased person

diuretics like sugars like mannitol increasing body fluids like in brain first like passing fluids across body like washing whole body or sites usually fluids not reaching or sites low in fluids like diseased brain washed from toxins like amyloid with that moving fluids and then exerting fluids as mannitol helping brain diseases like alzheimer

what causing brain edema is like fluids drawers like sugars like mannitol increasing fluids in brain and for brain diseases like detoxifying toxins like amyloidosis or ferroptosis or tumor

natural diuretics molecules and laxatives molecules increasing detoxifying sometimes

what decreasing body fluids for kidney diseases like ckd

what causing pulmonary edema for lung diseases like toxins deposited or tumor

what increasing body fluids or specifically drawing fluids to applied site is locally detoxifying toxins and regenerating cells both like from elevating localized immune system as orally laxatives for iron causing constipation and sugars like mannitol systematically administered crossing blood brain barrier increasing fluids in brain detoxifying toxins like amyloid helping brain diseases like alzheimer and brain tumor and irritants like capsaicin topically for joints pain and meaning for detoxifying toxins like minerals accumulation like iron causing constipation like administering laxatives orally or iron causing ferroptosis or amyloidosis both like administering laxatives locally or laxatives cross brain blood barrier systematically or sugars like mannitol systematically or locally and for localized immune system elevating and cancer and hotting tumor and antiaging

acids like hypochlorous acid like ascorbic acid for constipation when administered orally drawing more systematic and not systematic like from organs fluids containing systematic and not systematic molecules like neutralizers molecules like lipids to the site or food in digestive tract or affecting fluids in digestive tract like bile acids like binding which preventing reabsorption both softing stool or temporary detoxifying accumulating blockages like clots on cells walls preventing hydrating stool or activating inhibited hydrating factors like from defective systematic fluids like deficient with lecithin or toxicated both like from diseases or administering that acids intravenously ridding systematic lipids via passing them to digestive tract which also softing stool and as some laxatives drawing fluids to digestive tract causing dementia

what for amyloidosis like renal amyloidosis for detoxifying like for brain diseases like alzheimer as having amyloid

correcting neutralizers molecules deficiencies with giving neutralizers molecules like acidic neutralizers molecules like hydrochloric acid and citric acid and alkaline neutralizers molecules like lecithin and bicarbonate and lipids like steroids like correcting steroids deficiency and olive oil and protein and sugars and natural multivitamin and b6 and d3 and fulvic acid and bile acids and fish oil and hydrogen and thermogenesis molecules and fish containing selenium and mast cells activation molecules and diuretics molecules like stimulants like caffeine and laxatives molecules like anticholinergics antidotes like stimulants like nicotine and caffeine and lecithin specially if there is acute constipation and sex molecules like zinc and heart molecules like ptms molecules like sam e before and after giving chlorine dioxide or hypochlorous acid or antibiotics all when administered orally only not intracolony or intravenously as when someone was diseased uniquely never seen before like from forbidden toxins when taking ascorbic acid or eggs or even lot cold viscous protein drink feeling tingling in heart and overstimulated or agitated

what inhibiting melanin factors like melanin transfer for hair

what increasing aging like increasing melanin factors like melanin transfer like in darker color people is indirectly in alternative pathway than the default inhibited like any normal body causing these effects increasing immune system and stimulating body like increasing attention or cognitive which also from increased brain matters like white matter and grey matter as antipsychotics decreasing brain matters and meaning darker color people not smarter than whiter color people but not different except ordinary darker color people less affected than ordinary whiter color people from diseases like toxins like infections or food additives like synthetic colors or drugs

signaling molecules like gases like hydrogen like from generators or from molecules or plants producing gases like amygdalin producing cyanide or nitrate like from spinach producing nitric oxide or garlic producing sulfuric gases like hydrogen sulfide and methanethiol and allyl methyl sulfide or fibers producing butyrate short amino acid

or sodium chlorite producing chlorine dioxide or calcium hypochlorite producing chlorine for diseases known treated with chlorine dioxide like cancer and brain diseases like autism and toxins like infections

short amino acids like butyrate or acetate produced in gut is not different than gases as they are signaling molecules and as bicarbonate in acetate can be dissociated and converted to carbon dioxide and for diseases like cancer and diabetic ulcers

oxygen stimulating rbc and hemoglobin production as people live in higher attitudes have more rbc and hemoglobin oxygenating

some people have depression or anxiety both like from malnutrition including sunshine or exercising activities deficiency like moving or sex or meditating activities deficiency or prolonged stress called emotions overload or infections and misdiagnosed as primary abnormal mental

disease or from neuropsychiatric diseases and even the torturing in bipolar disease from depression called bipolar disease depression as dopamine agonist cured depression in bipolar disease and depression after antipsychotics or all that mix listed causing normal symptom called ocd leading to believing anything like already having mental disease uncontrollable wanting physical care like powerful chemicals just curious to try something new what will do to depression believing in health science specially if there is severe rights denying or severe emotional support deficiency from others around since years disappointing

what avoided for neuropsychiatric diseases like bipolar disease like ptms molecules like sam e is stimulants

elevated activated prostaglandins increasing immune system molecules and thermogenesis molecules like for both neurotransmitters and also elevated neurotransmitters increasing prostaglandins production and as antiinflammatories like nsaids blocking neurotransmitters inhibiting prostaglandins producing

probiotics and fibers causing abnormalities in diseased people like heart diseased people as they are increasing gases in gut affecting heart and more with preexisting infections

b vitamins not specialized methyl donors as they are requiring methylation first from specialized methyl donors like methionine meaning they have low amount methyl groups but they are required as carrier to delivering methyl group to specific receivers like some receptors b vitamins touching or binding with and other methyl donors like methionine not reaching

every methyl donor selective for organs

urine retention causing tumor lysis syndrome

someone take calcium hypochlorite and he felt strange and

after hours normalized and he slept and woke up with mild difficulty breathing like previous days from infections or from prolonged urine retention causing tiredness or from severe malnutrition like sugars or food or potassium for hypokalemia as hypochlorous acid decreasing weight or from gases like from infections or chlorine continuously slowly released like from insufficient stomach acid slowly replenished and that gas accumulating lowering oxygen as not breathed out or no enough breathed oxygen for neutralizing as breathing inhibited and mouth closed and laying flat preventing gases exertion from respiratory tract and exerting gut gases from colon inhibited and calcium hypochlorite staying reacting in digestive tract as absorption inhibited during night as he took calcium hypochlorite before sleeping and continuing after woke up with mild difficulty breathing he urinated and during coughing there was inability coughing strongly initially like choking and he felt mild pain in my heart like chronically drinking carbonated water like from gases stuck in the belly or heart more than oxygen like from elevated gases like not exerted from digestive tract like colon or respiratory tract or from insufficient oxygen as before days digestive tract

gases elevated which also elevating systematic respiratory tract gases causing coughing and during coughing he felt tingling in heart as also during coughing the breathing in inhibited causing insufficient oxygen which allowing high other gases which is toxic and breathing out inhibited not exerting systematic respiratory tract toxic gases but digestive tract gases mostly and after coughed there was gut gases moving to be exerted which is the sign for elevated digestive tract gases before coughing and meaning inability to sneezing substituted with coughing as sneezing usually exerting toxic excessive gases as heart tingling before sneezing and relaxing after sneezing and also as another person she take calcium hypochlorite for first time have excessive gases in gut and continuing after breathing deeply the breathing difficulty improved and he prayed and laid flat for minutes or slept again and after minutes or hours from awaking he felt more breathing difficulty than before and weakness and hungriness all resolved with eating burritos and sugars and water and all caused from malnutrition causing low sugars or low protein as calcium hypochlorite decreasing weight and he felt single episode same mild pain in heart during eating like

from eating intensively when digestive tract full like with gases and food and no more pain in heart rest day and meaning hypochlorous acid will be more tolerated not like calcium hypochlorite need converting to hypochlorous acid which leaking chlorine gas during reacting

what protecting goods outside exposed to air like propolis or bee pollen or fruit peels or sea water is antitoxins like infections and binds to toxins as bee pollen binding and detoxifying graphene

seizures is neurotransmitters deficiency except glutamate as it is more abundant as it is does not need producing but directly utilizing and storing glutamate like from consuming and allergy is neurotransmitters deficiency except histamine and glutamate and some autoimmune diseases is neurotransmitters deficiency except some excitatory neurotransmitters as the body will using other neurotransmitters substituting the default neurotransmitters deficiencies like using glutamate in seizures and excitatory noradrenaline in excitatory

dopamine deficiency like from dopamine blockers causing akathisia and histamine in allergy and as toxins like infections continuously overstimulating body which acutely depleting neurotransmitters more than the replenishing ability causing seizures and sleep diseases and preventing body repairing

melatonin is inhibitory signaling molecule requiring sleepiness as it is indirectly causing sleepiness or from sleeping process for some immune system activities as immune system requiring comprehensive body inhibition like healthy sleeping like from normal sleep molecules like hormones and other factors for some processes like major damage repairing like cancer or organs damage like ckd as sleep hormone helped ckd and meaning reversing selective inhibitory neurotransmitters blocked like dopamine which is excitatory mostly and inhibitory in some processes like blood pressure as when blocked causing akathisia or treating overstimulated body like from infections that causing seizures or sleep interruptions or from neurotransmitters imbalance like high noradrenaline like

from blocked neurotransmitters like dopamine like from antipsychotics causing akathisia required for some immune system activities like major damage repairing like during sleeping

growth factors proteins inhibitors or neutralizers or tumor inhibitors like chlorine dioxide for antiaging

some autoimmune diseases is defective immune system like from deficiencies

akathisia or restless legs syndrome from autoimmune diseases like from defective immune system like from deficiencies or from inflammation like from toxins like chemicals or infections or minerals overdose like lithium overdose

nuclear receptors for dna like dna synthesis and abnormal like bounded with toxins in diseases like cancer

immunosuppressants inhibiting t cells activation preventing tumor cure

drugs like nsaids avoided before vaccines is immunosuppressants

opposing immunosuppressants like neurotransmitters blockers effects for immune system like for cancer and for brain diseases

signaling molecules like neurotransmitters is the immune system as increased signaling between cells resetting cells back to healthy as butyrate in colon increasing connection between cells and preventing diseases like colon cancer and as inflammation like from autoimmune diseases treated with antiinflammatories blocking neurotransmitters receptors and meaning injecting signaling molecules receptors like neurotransmitters receptors and signaling molecules in tumor or increasing signaling molecules like neurotransmitters like in tumor and systematically for

cancer and injuries and organs diseases like ckd and vitality and diseases and meaning some signaling molecules are inhibitory signaling molecules like glycine working as inhibitors or brake for some cells to avoid abnormal activities and inhibitory signaling molecules deficiencies causing the elevated immune system destructive called autoimmune diseases and meaning the person can have asymptomatic elevated immune system with inhibitory signaling molecules like glycine or gaba during inflammation like from toxins like infections or autoimmune diseases without immunosuppressants like nsaids blocking neurotransmitters and meaning inhibitory signaling molecules like glycine or gaba antiinflammatories or immunosuppressants

pseudo high dose is term for low dose or medium dose or regular dose or typical dose or usual dose or safe allowed dose considered for most people is causing abnormalities in beginners or diseased people and if giving lower dose than administered dose will not causing abnormalities or will still have intolerance fundamentally

what treating stimulants like alcohol overdose is for alcohol intolerance like alcohol flush

toxins with biodegradability or detoxifying compatibility or short life like amygdalin deposited in cells regenerating cells and for diseases like cancer and antiaging and not like toxins like chemotherapy which is toxins like unspecified and platinum accumulating for long term in cells preventing curing

toxins accumulation in cells like excessive iron causing apoptosis called ferroptosis and meaning chemotherapy is toxins like unspecified and platinum accumulating for long term in cells causing apoptosis in weak cells like tumor cells and if detoxified will regrowing tumor or not regrowing

thyroid cancer
causes
infections
hpv

sv40
parvovirus
poliovirus

metabolic acidosis causing hemolysis

decreased brain white matter from decreased wbc production

stimulants like cocaine elevating neurotransmitters like dopamine lowering white blood cells as biostimulating molecules like energy molecules like neurotransmitters for processing or metabolizing or detoxifying or transporting molecules is breaking down wbc early causing agranulocytosis and meaning what causing agranulocytosis like stimulants like cocaine for blood cancer

levamisole nicotinic acetylcholine agonist is cocaine substitute

hypochlorous acid or calcium hypochlorite overdose like acetic acid overdose can causing myocardial infraction like from hypokalemia or low sugars or low protein or low steroids and causing metabolic acidosis

starting chlorine dioxide with nutrition for months to treating most diseases like steroids deficiency and heart diseases before calcium hypochlorite except in emergency as calcium hypochlorite causing pain in heart like from deficiencies like steroids deficiency in chronically diseased people

stimulants like nicotine for respiratory diseases like difficulty breathing or sleepiness from toxins like infections like coronavirus

alpha gal syndrome from toxins like infections in blood and detoxifiers and allergy molecules and autoimmune diseases molecules help as pseudo high dose stimulants like nicotine and non selective dopamine agonist present in

body did not causing any symptoms except head jerks and may be asymptomatic high blood pressure and causing abnormal response to food with high amount salt and yeast extract

starting with low dose calcium hypochlorite or chlorine dioxide as steroids low in most chronically diseased people and steroids will replenished more during low dose as calcium hypochlorite or chlorine dioxide treating diseases causeing low steroids

blood thinners or anticoagulants for cancer as tumor deficient with oxygen and red blood cells carrying oxygen not reached tumor surface from blockages like clots in roots

some people have hypochlorous acid vaccine so first time taking will feel strange like taking toxin and means starting with chlorine dioxide better

toxins like urine and gut gases causing breathing difficulties

diseases like akathisia from wbc elevators like lithium from inability to producing wbc from deficiencies as they are urging body to producing wbc

steroids increasing wbc and helping autoimmune means autoimmune diseases from wbc production deficiency like from substrates deficiencies and urging body with inflammation wanting wbc for toxins and means high wbc can be sign from toxins like infections and toxins like infections not direct wbc production stimulants like substrates and if there is inability to producing wbc like from deficiencies requested like from indirect wbc production stimulants like toxins like infections or like high dose lithium will causing diseases means indirect wbc production stimulants like toxins like infections or like high dose lithium not mostly for increasing wbc but wbc production substrates or wbc production stimulants with correcting deficiencies like with wbc production substrates

elevated immature granulocytes will converted to wbc means elevated immature granulocytes is also elevated wbc like from toxins like infections even if elevated wbc not showing in tests as most wbc quickly used for toxins like infections means most wbc have short half life systematically

anticholinergics causing dementia not detoxified fundamentally like still bounded

throat molecules for cancer as they treating diseases like inflammation and throat is rapidly dividing cells

sometimes infections like one virus alone not activated or affecting and when added another virus activated or affecting like thalassemia from sex relationship

inpt is free battery or electricity dissolved in water

hot shower followed with cold shower stimulating native viruses including bacteriophages and stimulating immune system like prolonged overactive immune system response causing inflammation and inhibiting checkpoints called temporary autoimmune disease and for cancer and immune system increasing and toxins like infections as lyme disease cured with inpt and as hot shower followed with cold shower causing sickness with fever like flu symptoms but it is may causing rheumatism like from activating native viruses or from causing chronic autoimmune disease like damaged molecules in body not detoxified and regenerated and chlorine dioxide or hypochlorous acid help as someone after hot shower and cold shower got rheumatism or not from hot shower and cold shower but from infections and means bacteriophages activated with temperature

anticoagulants or blood thinners for anemia as it is have clots in lung causing oxygen deficiency with difficulty breathing and for difficulty breathing

sickle cell anemia or anemia causing acute chest syndrome with difficulty breathing as hemoglobin and rbc carrying oxygen and low hemoglobin and low rbc causing oxygen deficiency with difficulty breathing and means inflammation like from toxins like infections or poisons like chemicals primary cause for oxygen deficiency with difficulty breathing and anemia secondary cause and diseases like blood clots or allergy thirdly cause and deficiencies fourthly cause

capsaicin topically on head stimulating head and increasing blood and signaling molecules like neurotransmitters to head to detoxifying accumulated iron and amyloid in brain diseases like alzheimer

capsaicin topically like capsaicin bath for overall health like regenerating cells like skin cells and joints and inflammation and stimulating whole body regenerating and for antiaging and athletes

iron accumulating block neurotransmitters in site as oral iron causing constipation as intestines moving or mobility stimulated by neurotransmitters and means iron accumulated like from not processed or metabolized or detoxified like from damaged iron transporters in alzheimer brain blocking neurotransmitters and also as they said causing ferroptosis and means molecules like blood clot or iron accumulated in disabilities

symptom from infections like viruses waking up multiple times during sleeping like stimulants like non selective dopamine agonist

symptom from infections like viruses chronic coughs and difficulty swallowing

symptom from infections like viruses throat inflammation and gums inflammation

symptom from toxins like infections like viruses causing

autoimmune diseases is skin diseases like melasma or lupus in face

what inhibiting melanin factors like melanin transfer like acids like vitamin c for cancer and aging as whiter color people have inhibited melanin factors aging more slowly

antipigments for detoxifying as they cleaning molecules colors like removing melanin from skin and similar to chlorine dioxide

regenerating or targeting rapidly dividing cells resetting hair back to childhood for smoothing hair as chemotherapy regrown smooth hair after hair loss

tightening hair skin pores for smoothing hair

antipigments or pigments like melanin stimulants topically on hair skin for smoothing hair

melaningenesis dysregulated in cancer as breast cancer have darker areola and thicker skin or from coagulated fluids like blood like from oxygen deficiency

breast cancer from excessive steroids like waste steroids and new steroids stuck accumulated in breast not processed or detoxified like from blockage or steroids factors abnormal like active as breast cancer have darker areola and thicker breast skin

antipigments molecules like acids like lactic acid or alpha hydroxy acids deficiencies or their pathways sabotaged like blocked or deactivated in cancer as breast cancer have darker areola

antipigments like lactic acid for cancer as breast cancer have darker areola and as vitamin c helped cancer

finding major diseases or side effects caused by

antipsychotics like breast cancer and the treatments for breast cancer for reversing antipsychotics or akathisia or adding also overdose treatments

antipsychotics cause belly muscles relaxation as gases exerted involuntarily and belly muscles contractors antipsychotics antidote

exciting things without intense moving like performing instruments or watching tiktok is overstimulating brain which writing on brain memory not mostly reading or more than the reading and not like exciting things with moving like exercising which typically for short time and healthy overall so means rest by relaxing your body from foots to forehead supported by breathing in and out while not be exciting or overstimulating if you handling medical instruments to avoid new randomly memory writing and to read from memory

symptom from infections like viruses is unusual pain in

digestive tract before needing to go bathroom to defecting in every time

most times the viruses itself not destruct nerves but attracting immune system affecting nerves so most diseases is autoimmune diseases as results

in advanced infections stages like stage three after days from exposing seriously cause rapid respiratory difficulties in less than few hours called acute flaccid myelitis or guillain barre syndrome

what interact with drugs like caffeine reversing some drugs and for detoxifying and diseases like cancer

reversing or modulating or replacing what drugs analog to or binding to or what modulating for cancer like depo provera is progestogen based causing brain tumor means depo provera antidote or reversing effects or modulating its pathways or replacing with other progestogen for brain

tumor treatment as treating toxic radiating iodide causing thyroid cancer with other iodide

bedsores or pressure injury for cancer or hotting tumor as pressure causing cell death and increased blood on applied site

hypochlorous acid factors like hydrogen peroxide and myeloperoxidase for autoimmune diseases

what cause autoimmune diseases or what avoided in autoimmune diseases for cancer or immune system

antiinflammatories or immunesuppressants in autoimmune diseases from toxins like infections lowering destructive immune system response to not damaging body and stay fighting infections in low mode

ckd and diabetes is autoimmune disease from toxins like

infections as proteinuria and hematuria in hsp disease

who have appendicitis and even if did appendix surgery still have infection systematically and also during appendix surgery the isolated endotoxins like microbes in appendix leaking to near cells infecting and poisoning whole body specially if blocked appendix cutted from middle and not like herxheimer reaction which is one time poisoning from microbes cells breakdown not infecting anymore as someone did appendix surgery and get diseases like disabilities like from systematic infections causing transverse myelitis by attracting destructive immune system in spinal cord and ear ringing like from face infections like mumps virus causing mumps disease both from infections and rarely toxins and means appendix surgery was unnecessary as it is was infections like mostly localized accumulated microbes only inflamming and swelling appendix which can also causing pseudo blockage and if that is physical blockage which can be meditated or still blocked depending on appendix swelling from infections and treating infections causing swelling or

swelling alone not helped it is can be treated by squeezing blocked appendix content back to intestines

some autoimmune diseases not autoimmune diseases but inflammation like from infections

what cause easily bruising for cancer as it is increase blood to surfaces

detoxifiers like chlorine dioxide or hypochlorous acid during chronic high dose administering systematically only but not intratumorly detoxifying also or reducing proteins like immune system antigens or antibodies like pd1 blockers like from production stimulated from plants or administered circulating in blood or already in cells for some cancers curing as chlorine dioxide decreased prostate specific antigen but also cured prostate cancer and generally detoxifiers systematically still beneficial like curing some cancers like prostate and in some cancers decreasing tumor and metastasizing all that even when reducing

immune system antigens or antibodies or without immune system fundamentally but sometimes not leading to complete curing some cancers means administering those detoxifiers or immunetherapy like cancer plants separately like starting on detoxifiers to detoxifying body like from toxins or old defective antigens or old defective antibodies and reducing tumor and metastasizing and if not completely cured discontinuing systematic detoxifiers and starting on immunetherapy for period and if not completely cured discontinuing immunetherapy and back to systematic detoxifiers for maintenance purposes period and discontinuing systematic detoxifiers and back to immunetherapy and repeating until cured or administering detoxifiers like medium dose systematically with immunetherapy not affecting immunetherapy

sudden progressive paralysis or weakness episodes in left jaw or mouth and breathing shortness from inflammation from toxins like infections like west nile virus or enteroviruses like enterovirus d68 or poliovirus causing heart diseases like preparing heart attack especially if there

is liquid lipids deficiency or causing acute flaccid myelitis or autoimmune diseases like guillain barre syndrome or bell palsy specially if firstly have flu like symptoms or sickness or from stroke or neurological diseases or tumor like head cancers or neck cancer or brainstem cancer or antagonized neurotransmitters receptors or molecules receptors or vaccines like their toxic accumulating or accumulated spike proteins causing ascending paralysis or spicy food but hot sauce or eating itself decreased mouth paralysis or sudden left mouth paralysis from hot foot or excessive sex and showers depleting neutralizers and antiinflammatories like steroids

immune system activation or boosting from neurotransmitters as pain relievers is immunesuppressants and stimulants antidotes by antagonizing neurotransmitters means different neurotransmitters agonists like psilocybin activating or boosting immune system for diseases like cancer and disabilities

acidic neutralizers like uric acid or hypochlorous acid or

pyruvate acid or lactic acid what converting molecules from lipid soluble to water soluble to be exerted from cells to urine as they said and means acidic neutralizers molecules deficiency in obesity

seventy five percent of nowlife diseases caused by stealthy infections never diagnosed as not everything is diagnosable easily

thalassemia is bone marrow disease like blood cancer and can be caused from infection like from sex like hiv virus as thalassemia causing enlarged spleen and liver or deficiencies like sex molecules deficiency or sugars factors impaired or minerals like iron factors impaired or toxic accumulated proteins like proteins causing autism and comes from sex and disinfectants like hypochlorous acid or chlorine dioxide help

air attitude causing clouds to stay down and means activities like air traveling or jumping or highlands

modifying diseases like stimulating or increasing whole body functions like immune system and nervous system and all receptors and oxygenation and rbc as people live in higher attitudes have more rbc and oxygenation

most times dna get damaged toxic stable particles inserted during replication and stays in the root causing abnormal sub appearing as tumor and back to root treating or detoxifying will allow what behind to repair or reaching the abnormal sub or total tumor repair as the toxic particles in root was preventing total tumor repair like the immune system was stuck in trying repairing the root which containing toxic resistant particles or detoxifying root at least will preventing tumor resistant to treatment or regrowing

lecithin or phospholipids impaired like from lipids processing deficiencies in seizures people as lecithin is molecules transporter vehicle to blood and systematically and high dose nutrients cause mild shock in head from insufficient lecithin

nutrients like vitamins in oil like sugars like high dose allulose causing mild shock in head like sex orgasm or electroconvulsive therapy like suddenly neurotransmitters firing stimulating brain and nervous system and immune system like for cancer detection one time is enough or not and for diseases like cancer

autoimmune diseases or abnormally overactive immune system or agitation or restless or anxiety or insomnia from overactivation of specific neurotransmitter receptor or receptors like toxin bounded

autoimmune diseases from bone marrow diseases

most diseases like diabetes from autoimmune diseases or have autoimmune diseases

down syndrome eyes from heart as patient transplanted

heart have unusual eyes

estrogen what stimulating other organs like producing immune cells and antigens and healthy molecules for breast milk to lacting as it is most elevated molecule in breast

low testosterone and reproductive fluids like semen fluid and breast fluids cause cancer and correcting testosterone and reproductive fluids like by replenishing and stimulating like by sex activities like with fluids discharging like ejaculation or orgasm or pregnancy or discharging breast fluids like by stimulating or breast feeding prevent and cure cancer as breast fluids contain antigens and immune cells and suitable for self drinking for diseases like cancer like blood cancer means what increasing or stimulating breast milk for cancer

akathisia or nerve pain from inflammation like from toxins and antiinflammatories for akathisia and nerve pain as hot

sauce relieving akathisia

appetite stimulants like hot sauce antiinflammatories and appetite suppressants inflammatories and for cancer and hotting tumor

body temperature or fever excessively elevated mostly from infections or toxins or autoimmune diseases as infections increasing blood clotting factors and aspirin thinning blood preventing blood clots and used for fever and means body elevating temperature to dissolve or avoid blood clots injuries or events like from ascending blood clotting from infections and aspirin thinning blood or dissolving blood clots making the body not need elevating body temperature which disappearing the fever means blood thinners or anticoagulants is antiinflammatories or antifevers

hotting tumor activities like irritants like topical capsaicin increasing blood flow to cells which also including scalps promoting hair growth and melaningenesis and prevent or

cure skin cancer from damage like uv or skin diseases like injuries like ulcers or bones diseases like broken bones like spinal cord injury as increased blood flow in cells increasing skin or organ cells immune system

making head upside to down and additional uplifting legs to up stimulating or saturating or drawing more blood to head like glowing skin and hair growth and like hotting tumor activities like capsaicin applied to specific site stimulating or saturating or drawing more blood to that applied site and also making head upside to down stimulating brain and immune system and for diseases like cancers like brain cancer and like bones or joints as most diseased patients sat or layed naturally like typically on foot since long time before diseases and changing that position to reverse help as quite exercising specially if there is difficulties to molecules like blood reaching brain as who doing backflips not getting cancer

natural dyes like beets juice like methylene blue and prussian blue

electroconvulsive therapy mimicking sex orgasm activities like temporary dopamine spike

alternatives to doing sex is what causing orgasm or ejaculation or wet dreams as they artificially induced orgasm in brain site and means that site dysregulated in diseases like cancer

antioxidants is also antiinflammation and undesired during cancer treatment as inflammation necessary for cancer treatment as inflammation increase immune system activity and sign from active or strong working immune system as strong immune system necessary for cancer treatment and antiinflammatories like steroids and pain relievers like acetaminophen is immunesuppressants suppressing immune system activity like responding to abnormalities like diseases like cancer and toxins and vaccines as antiinflammatories prohibited before vaccinating and as chili is antioxidant and decreasing

inflammation or sickness and means oxidants is inflammatories typically healthy

acidic molecules and spicy molecules anticoagulants

energy factors or pathways dysregulated before cancer

alcohols processing and metabolizing dysregulated before cancer

lipids processing and metabolizing dysregulated before cancer

glycerol factors malfunctioning from sugars or lipids diseases like sugars or lipids factors like processing or metabolizing malfunctioning like diabetes in cancer and glycerol or lipids or sugars with stimulants like nicotine and non selective dopamine agonist for cancer as glycerol increasing water retention in whole body like cells

what cause sodium retention or absorbents or antioxidants or protect water from evaporation or increasing body water retention like glycerol or nanoparticles like lecithin or bicarbonate or bicarbonate or acetate with carbon dioxide tendering meat or making meat juicy and for skin care

all metastatic cancers same thing means what treating brain cancer is also for breast cancer

what causing symptoms like symptoms during curing cancer like with checkpoint inhibitors or during curing or treating cancer like in spontaneous tumor lysis syndrome is immune system stimulant and for cancer

accelerated body molecules breakdown causing herxheimer reaction or inflammation or autoimmune diseases or sickness as oxidants like chlorine dioxide chronic administration oxidized body molecules caused herxheimer reaction and muscles tears causing rhabdomyolysis and rapid tumor cells breakdown causing

tumor lysis syndrome which with sickness

vagus nerve stimulation or closed mouth slowly deep breathing in and out increase thermogenesis as it is increased hands temperature during praying seated

chronic organ disease like chronic kidney disease from clogged kidney with toxins have large molecular weight and reversing fluids circulation or vacuuming or washing aggressively which containing pushing deposited toxins from cells surface back to entrance site like with solutions contain vehicles like solvents like dmso or soaking in solutions like neutralizers like bicarbonate or disinfectants like chlorine dioxide or solvents like dmso

what convert large molecular weight particle to low molecular weight particle in the body like solvents or oxidants for detoxifying toxins like polyacrylic acid and carbon particles as it is will promote biodegradability for low molecular weight

reticuloendothelial system or monocytes or macrophages or dendritic cells for detoxifying toxins like carbon nanoparticles in cells and blood

immune system diseases like autoimmune diseases from bone marrow disease

macrophages stimulants or monocytes stimulants for cancer and detoxifying toxins as macrophages or dendritic cells present antigens to t cells and the antigens like pd1 blockers antigens

toxins like infections seriously can cause all diseases without any exceptions from disabilities like paralysis and unconsciousness and cancer to acute or rapid death invisibly or obviously

toxins like infections cause seriously severe intoxication or unconsciousness like confusions and hallucinations and

dissociation and memory loss all specially in severe infected state or infection stage two both called sepsis which can develop to septic shock as dogs scratch disease injured was intoxicated

sometimes the body removing toxins with coagulation as infected patient formed multiple blood clots in the whole body and microplastics was found in clot caused stroke and diabetes patients have thinner blood as if they have wound not stop bleeding and have less defense against infections as wounds stay not healed means balanced coagulation factors necessary for detoxification and means diabetes from bone marrow disease as coagulation factors like platelets from bone marrow and already showing bone marrow difference compared to healthy bone marrow in visualized picture

polymers like fibers and detoxifying toxins like heavy metals in gut

polymers is absorbents or adsorpents for detoxifying like metals and for ejecting toxins in cells like lung cells as they make zeolite based absorbent and zeolite for heavy metals detoxification in human and they used polyacrylic acid in tissue engineering

what increase fluids like mucus like runny nose or flu like symptoms or saliva or sweating or herxheimer reaction like infections and hot sauce is immune system stimulant for cancer and immune system and diseases as flu symptoms like runny nose is natural defense mechanism or response caused by immune system means sometimes the body make these symptoms not to make the person sick but to defend

ocd is mental disease or psychological disease or psychiatric disease or neuropsychiatric disease like others adhd and anxiety and agitation and psychosis and dissociation and paranoia and mania and depression and addiction for treatment purposes

what plants cross brain blood barrier modulating like activating neurotransmitters for almost all diseases like brain diseases like alzheimer and brain tumor and akathisia

antiparasitics or antiprotozoals for cancer

what antiprotozoal is general disinfectant

how does seasonal flu comes the strong wind bring toxins from grounds and walls and air and other things outside and highly delivering them as strong intensive air to humans outside like street and inside buildings as i left hot sauce platter exposed to air near window and i ate burritos with that hot sauce and first time inhaled air very strong comes to lungs easily as it is strong intensive air and i take shower before that and in the night i felt flu symptoms or preexisting from recent days like this strong intensive toxic air or poisoning from burritos or hot sauce or recent days chicken

abnormal clotting factors in breast causing tumor

sex activities in body before ejaculation like elevating neurotransmitters and elevated prostaglandins and body temperature and stimulating vagus nerve and elevating pressures or gases like nitric oxide to pushing semen fluid for disabilities including blindness and cancer as after ejaculation feeling disabled or muscles stiffness or inflexibility or shorted or contracted like from no pressure as pressure depleted for ejaculation and kidney disease

kidney disease or diabetes from pancreas disease as protein not processed like not hydrolyzed from enzymes deficiency from the enzymes factory pancreas exerted in urine and called proteinuria and also pancreas enzymes and other organs enzymes for handling proteins fundamentally including metabolizing not only hydrolyzing

lipids including steroids and lipids processing molecules for breast cancer as cheese is lipids from milk and similar to

human milk

eating ice cream which contain lipids and felt less cognitive and lot spontaneous thoughts means antihyperlipidemics molecules and lipids processing molecules for brain diseases and neuropsychiatric diseases like schizophrenia

thyroid hormones for akathisia and breast cancer as i felt my throat dry or scratched like no thyroid hormones or the excessively high accumulated thyroid hormones or defective thyroid hormones produced like from antipsychotics causing akathisia and breast cancer as i did sex with ejaculation by masturbation helping akathisia and breast cancer and known to depleting thyroid hormones as i did prolonged presemen discharging without ejaculation and i felt my throat dry or scratched for days and specifically ejaculation known to stimulating thyroid hormones production

when reproductive organs molecules production reduced

like progesterone in menopause womens which causing endometrial cancer and estrogen or estradiol or other steroids in breast which causing breast cancer also thyroid hormones reduced primarily or secondary

treating all steroids pathways like steroids production including acetate pathways for cancer

who have high blood pressure or stimulated nervous system like ckd and seizures and some infections and autoimmune diseases do not have cancer

some autoimmune diseases is booting dysfunction means very weak to start even mildy not over active

high lipids diet for seizures lowering nervous system stimulation including from external stimulants and what lowering lipids like hypochlorous acid elevating nervous system stimulation which elevating immune system but not causing seizures as it is not only lowering lipids means high

lipids diet for autoimmune diseases

elevating body functions like in sex like high neurotransmitters and body stimulation like stimulating nervous system and immune system for cancer because most people get cancer are sexually underactive and with deficiencies like immune system deficiency

high dose steroids same steroids types found in targeted organ like breast have more estrogen and hotting tumor activities for cancer

hydrogen peroxide and iodide for thyroid

administering hydrogen peroxide if there is no hydrogen peroxide produced in the body or fixing its pathways for myeloperoxidase to create hypochlorous acid and thyroid peroxidase to oxidizing iodide to iodine to iodinating proteins during thyroid proteins synthesis

administering chlorine dioxide and hypochlorous acid separately

almost all diseases like obesity and toxic overload and diabetes and infections and immune system deficiency and cancer from hypochlorous acid deficiency

kidney stones from hypochlorous acid deficiency and hydrogen peroxide deficiency

hypochlorous acid and chlorine dioxide for kidney stones as they react and oxidizing uric acid which is antioxidant

cysteine same glutathione as they contain thiol groups

they said she got abnormal urine and became anuric from kidney injury from high dose clorox 100ml intravenously excessive dose at one time
sodium hypochlorite not mixed with acid like stomach acid

when administered orally to make hypochlorous acid as sodium hypochlorite intravenously poorly converting to hypochlorous acid in the blood and stays mostly as free hypochlorite which is undesirable and degrade slowly

high dose from different steroids for cancer as progesterone deficiency caused reproductive cancer in menopause patients and steroids used for cancer

breast cancer from estrogen deficiency or defective estrogen production as progesterone deficiency caused reproductive cancer in menopause patients and estradiol helped akathisia which caused by antipsychotics which also causing breast cancer and if it is by defective estrogen production supplying estrogen may not help as defective estrogen production already caused damage leaded to cancer

what cause hungriness increase and activate neurotransmitters as fasting causing hungriness and high

neurotransmitters

sodium hypochlorite same calcium hypochlorite
they chosen calcium hypochlorite as it is powder to be placed in capsules and not liquid like sodium hypochlorite as it is will oxidizing capsules
they recommend four calcium hypochlorite 400mg capsules per day
they recommend start with opening calcium hypochlorite with 65% purity 400mg capsule and putting quarter part in one water glass 250ml will resulting with dilution 260 ppm or two water glases every two hours
quarter calcium hypochlorite 400mg capsule about 1ml or 1.5ml clorox 4.5% in 500ml water
chlorine dioxide toxicity calculated based on chlorite
sodium hypochlorite toxicity calculated based on chlorine which called available chlorine or total available active chlorine which refers to the total oxidizing power of all substances contain active chlorine like sodium hypochlorite breakdown products primarily hypochlorous acid and hypochlorite ion means the dose primarily calculated on

available chlorine
available chlorine same free chlorine for dosing purposes
pure concentrated 100% sodium hypochlorite about
equivalent to available chlorine for dosing purposes
the toxicity studies said lowest noael dose 44mg available chlorine or free chlorine/kg/day and the dilution was 1000 ppm sodium hypochlorite
the organizations said 5mg or 10mg or 15mg available chlorine or free chlorine/kg/day which 5mg/60kg/day equivalent to 6ml clorox 4.5% as the available chlorine in 1ml clorox 4.5% is 43mg and about one calcium hypochlorite 400mg capsule
means generally safe allowed intake up to 20mg or 30mg or 40mg available chlorine per kg per day and dilution up to 1000 ppm and general rule in anything starting gradually like 5mg available chlorine per kg per day and dilution 300 ppm if mixed with water not capsules so for 55kg person 5mg multiple 55kg equals 275mg available chlorine per day so will be calcium hypochlorite with 73% purity 400mg divided to four 100mg parts dosing separately during day each 100mg part mixed with 250ml water will resulting with dilution 300 ppm or each 100mg part mixed with 500ml will

resulting with dilution 150 ppm drinked slowly over hour or two hours for well tolerance except in emergencies
can causing metabolic acidosis and hypernatremia and hyperchloremia and anuria
for abnormalities like falling is never happened in practice but feeling like any drug like chemotherapy but much less and stimulants and lipids in some diseases and will using for abnormalities electrolytes mix or sugars or protein or in severe cases going to hospital and anuria in overdose renal replacement and always after hours from administering eating food so much as it is significantly decreasing weight and if there is difficulty breathing after waking up it is from preexisting infections transient symptom more effective during sleeping not awaking and urinating and exerting gut gases and breathing deeply and eating food and sugars as calcium hypochlorite significantly decreasing weight will help
clorox have impurities
heavy metals also in soap delivering trace minerals during washing body and hands
heavy metals also in tap water
they said purifying 1750ml contaminated water with 1.25ml

clorox

diabetes from pancreas disease like infection as it is have high systematic proteins like hemoglobin not degraded from enzymes deficiencies from the enzymes factory pancreas and not have insulin which produced in pancreas cells and means diseases with high systematic proteins or lipids or sugars from pancreas

disinfectants like chlorine dioxide and hypochlorous acid for drug test

heating oil on hair as lipidation for smoothing hair

what lighting or bleaching hair like hydrogen for cancer and diseases

what cause hair loss or alopecia universalis for cancer

sugars derivatives like vitamin c and sugars metabolites like ribose is hypoglycemic agents

vitamin c as hypothermic agent not for preventing brain damage after cardiac arrest as they said therapeutic hypothermia prevent brain damage after cardiac arrest as vitamin c is affecting unhealthy heart as increased mortality in ckd and i felt my undiagnosed unhealthy heart pain after weeks administering vitamin c

movements diseases is thermogenesis defects in parts as cold body shivering lack heat

what have hypothermic effect like antioxidants like vitamin c and fulvic acid for inflammation and fever

any plant contain stimulant also contain stimulants antidote as cannabis contain thc and the antidote cbd

stimulants are mild poisons as they kill infections like parasites

sudden involuntary head jerks called myoclonic jerks which is reflex or simply response to sympathetic nervous system stimulants like startling events and nicotine and excitatory neurotransmitters like non selective dopamine agonist and cold exposure

what cause temporary autoimmune disease for cancer

glutathione remove excess neurotransmitters like glutamate means glutathione deficiency in seizures

sympathetic nervous system stimulants plants stimulants like nicotine and excitatory neurotransmitters like dopamine and non selective dopamine agonist and glutamate and cold exposure and cold body from defective thermogenesis as both cause jerks and as hypothermia is stimulant increasing akathisia and heat exposure and hyperthermia

and infections as before defecting cause jerks from the waste moving down or overload like waste moved in new site both stimulating body causing jerks means jerks like seizures from gut infections and allergens as they touching cells stimulating body and high glutamate released and cold and hot showers as born get seizures after shower or from hypothermia after shower and fear and stress like over thinking and in tv room or running as person get seizures or jumping or exercising

heart pain or heart attack after hours from shower and after eating animals and that women heart attack after eating from glycine deficiency and sugars deficiency as taking chocolate helping a lot

infections is stimulating sympathetic nervous system

cold or cold body from defective thermogenesis stimulating body or sympathetic nervous system which cause body organs like head involuntary jerks which they call it startled

reflex from stimulants like cold or fall and seizures means thermogenesis molecules for seizures or seizures like

jerks same spasms no different ever

some steroids worsing akathisia because they are like stimulants and stimulants in high dose worsing akathisia and in low dose for akathisia

startled reactions like movements diseases

some infections deposited deeply like in secure clear materials like cartilage or bones fulfilled which not allowing blood to enter whole bone and blood partially reach them slowly which means continuing administering disinfectants like chlorine dioxide for months or years or injecting intraorganly or transdermally with vehicle like dmso

cbd helped seizures as it is inhibiting cyp450 and body

response to stimulants like infections and autoimmune system molecules and antiinflammation molecules for seizures but not cure

dopamine agonist work like stimulant for akathisia and over time causing augmentation means short time dopamine agonist and inhibiting excitatory neurotransmitters like by inhibitory neurotransmitters or neurotransmitters antagonists like noradrenaline antagonists

iron bisglycinate helped akathisia more than iron alone because it is contain glycine which is inhibitory neurotransmitter and means glycine for movements diseases like akathisia and rls and rls augmentation

seizures chronic lack of inhibitory neurotransmitters like glycine and gaba

dogs disease or dogs bite symptoms is poisoning or infection and intraorganly and systematically antipoisons or

antivenoms or poisons antidotes and antivirals and antibiotics and antiseptics and neutralizers like chlorine dioxide and hypochlorous acid and hydrogen peroxide and bicarbonate and acetic acid or citric acid and dmso and enzymes and methylene blue and nac and glutathione and stimulants like nicotine and atropine and immune system molecules like fulvic acid and steroids and ptms molecules and nutrients like protein and vitamins like hydroxycoblamin and honey and milk and cpr for dogs disease as plague from rodent bacteria and dogs disease symptoms like septic shock from infection

the processes or actions occurred during orgasm and their substrates like boosting or replenishing steroids for all diseases like heart as it is feels warm and unholded or strengthened during orgasm for seconds and lowering or balancing high or excessive excitory neurotransmitters like dopamine and glutamate as prolactin have inverse relationship with dopamine and like for seizures

what cause hemolysis for cancer in suitable dose like

chlorine dioxide

female reproductive organ cancer from menopause caused from accumulated toxins in small amount unexerted blood in organ not detoxified from organ deficiencies like neutralizers like steroids like progesterone means organs detoxifying like kidneys and spleen and liver have molecules neutralizing and oxidizing and for cancer and diseases

what target parasites dna for cancer as cancer dna weak similar to animals like parasites

cooling molecules not produced or excessive thermogenesis in seizures people as they have stimulated nervous system and hot shower stimulating nervous system

alcohol flush reaction from low hypochlorous acid and glutathione

obesity also accumulated toxic chemicals as the body detoxifying drugs by convert them from lipid soluble to water soluble to exerting in urine or bile and if the body can not oxidizing lipids as obesity also will not detoxifying drugs

noradrenaline breakdown enzymes activators like mao activators for high blood pressure and restless legs syndrome and detoxification as insufficient breakdown enzymes activity like mao activity causing high blood pressure and restless legs syndrome

dopamine agonist caused rls augmentation and elevated acetylcholine and mao activators or acetylcholinesterase activators or reversers like poisons antidotes or acetylcholine antagonists for rls augmentation

seizures from damaged fluids transporters as dehydration caused seizures and no oxygen or blood and glucose to brain

antiinflammation drugs toxicity antidotes like nac and poisons antidotes reversing blocked receptors like antagonized neurotransmitters

maximizing immune system enough for cancer

growth factors and growth plants like for spinal cord injury and regrowing nerves plants or modulating nerves plants like plants seeds for disabilities

neurotransmitters antagonists or what help avoid excessive neurotransmitters for stimulants toxicity and sleep and seizures

what inhibiting drug metabolizing enzymes like cyp450 is stimulants antidote and parasympathetic nervous system stimulant which encounter sympathetic nervous system stimulated and excessive excitory neurotransmitters from stimulants or not from stimulants antidote or all previously

mentioned is primarily inhibiting cyp450 like cbd and cold exposure and sleep and sex and cold showers as stimulants but not limited to st john wort inducing cyp450 and as excessive neurotransmitters major symptom from stimulants toxicity and means for rls augmentation caused by dopamine agonist or regular rls or akathisia and for sleep

chlorine dioxide oxidizing blood proteins and the cells specially the cells with excess proteins like tumor organ or area first will release proteins to blood and repeated processes results tumor reduced but not disappeared typically means proteins mobilizing agents accelerating tumor reducing and metastasizing by chlorine dioxide

neutralizers like hypochlorous acid oxidizing lipids in blood and the body requesting cells to release lipids to blood or the cells itself now after low blood lipids is able to release lipids to blood and repeated processes results weight lowered

if cancer plants combination not tolerated avoid combining multiple plants that stimulants or if stills untolerated avoid combining multiple poisonous plants or if stills untolerated avoid combining multiple stimulants plants and avoid combining multiple poisonous plants means one or couple stimulants plants with one or couple poisonous plants per day and in rare circumstances avoid combining stimulants plants with poisonous plants means combination or couple or one poisonous plants without stimulants plants or combination or couple or one stimulants plants without poisonous plants

high calcium like in cancer from high albumin not degraded like hemoglobin which means albumin handlers defective and behind cancer

lipids for rls augmentation caused by dopamine agonist which other than akathisia caused by antipsychotics as lipids specifically oils worsing only akathisia or rls caused by dopamine antagonists

cannabis psychoactive need to be administrated hot like smoking or infused oil or roasted or as they said cannabis psychoactive need to be activated by heating which called decarboxylation and will stay with psychoactive even after it is cools means administering plants hot or cold already heated like infused oil increasing plants properties but hot infused oil more than cold already heated infused oil as hot infused oil will increase absorption and metabolizing and fresh with active unstable compounds

what lowers dopamine like sex and hormones like prolactin but rarly it is may already high with dopamine and prolactin known as risk factor for breast cancer and detoxifying stimulants using antidotes and specific dopamine receptors antagonists in low dose or partial agonists like non selective partial agonist or plants lowering dopamine or naturally antipsychotics and anxiolytics for rls augmentation

any stimulants like st john wort inducing cyp450

i take natural multivitamin and b6 and iron and lecithin and nicotine patch and non selective dopamine agonist patch and fulvic acid and chicken and sugars and all or nicotine patch and non selective dopamine agonist patch either individually or both caused multiple sudden involuntary head jerks like cold jerks both called myoclonic jerks as stimulants aka sympathetic nervous system stimulants cause jerks and nicotine and excitatory neurotransmitters like dopamine or dopamine agonist both is stimulants and they said high lipids diet for seizures means high or excessive activated dopamine in select receptors as usual healthy selected them or high or excessive activated dopamine in all receptors or one of the two with high or excessive activated acetylcholine in nicotinic receptors specifically both dopamine and acetylcholine the only high among others or one of the first two previously mentioned with stimulants like nicotine or stimulated nervous system spontaneously or abnormally causing seizures by quickly eliminating body molecules like hormones or specifically

lipids including but not limited to steroids and wanting dietary lipids insights endogenous lipids producing defective and or by inducing cyp450 as these eliminating properties similar to inducing cyp450 like by st john wort which is stimulant and temporarily decreasing seizures threshold or causing seizures from stimulants like nicotine alone while or non selective dopamine agonist acting as selective stimulant alone as i felt like stimulants intake in energy and acutely interrupted sleep multiple times during night after taking non selective dopamine agonist alone and means taking both stimulants like nicotine and non selective dopamine agonist results in stimulants toxicity and means any high neurotransmitter or specifically high neurotransmitter activated in all receptors acts as stimulant or in simple words all neurotransmitters is naturally stimulants but different in stimulating effects some stimulating inhibiting and relaxing effects like activating or stimulating parasympathetic nervous system which called cold stimulants and means seizures from parasympathetic nervous system endogenous stimulants or activators deficiency and insights the stimulating effects from stimulants is not from them directly but increasing

neurotransmitters levels and neurotransmitters stimulating if from sympathetic nervous system or excitory or hot stimulants like caffeine will exciting body

previously wrote all what i take caused seizure like or increased hidden preexisting seizures or caused stroke or prestroke all as mild shock in head with sudden involuntary head movement called head jerk or spasm for less than second

they said tylenol or antidepressants during pregnancy

caused autism to born and nac antidote for tylenol and giving nac and what produced by nac like metabolites and what substances helped or was cofactor for them

multiple minerals or ionic minerals or specific minerals individually in fluid like fulvic acid take electrons from others like bacteria as fulvic acid acts as corroders to plastic but not for humans when diluted

minerals factors or pathways like transporters or what carring minerals and receptors and what binding to them or binders like proteins disrupted in tumor as immune system boosted in minerals presence as after administering fulvic acid

injecting fulvic acid intratumorly as it is corroding plastic like neutralizers like chlorine dioxide and as systematically administered fulvic acid increasing immune system intratumorly will cause more immune system response in tumor but injecting without chlorine dioxide as fulvic acid

react with halogens like chlorine and fluorine results toxic molecules like metals or both will damaging tumor more

hotting tumor activities like colding topically enough for tumor

what for heart for overall body health

heart not get cancer from lot blood presence which also heating and heating separately and stimulating like motion like pulses and pressing means bringing blood to tumor and heating it which both like by hotting tumor activities like capsaicin topically and vibrating treating or preventing tumor or heart receiving more oxygen means oxygen factors like oxygen transports and receptors and what carring oxygen like blood like its factors like transporters or receptors defective in tumor

brain tumor disrupted heat

tumor cells flaming since initiation and colding inactivating flame resting cells as my breast tumor cause tingling during initiation but cold in whole area sometimes means heat disrupted first since tumor initiation like from disrupted thermogenesis pathways like dopamine factors like receptors in breast and mitochondria and iron or anemia or heme factors like iron receptors in breast and steroids like progesterone factors like receptors in breast and nerves in breast and heat transporters and means breast or breast tumor naturally cold physically other than most organs making it the reason behind labeling it as cold tumor and heating it with capsaicin topically enough for hotting tumor for immunetherapy or curing tumor alone as it is cause heat in applied site by drawing blood to it as heart not get cancer from blood presence which also heating and heating separately

saliva fluid contain dna means all fluids contain dna and eye dryness from no fluid from dna and nucleotides deficiencies

dopamine disturbed in almost all diseases like alzheimer low dopamine how will be high neurotransmitters as it is sign of wellness or vitality in neuropsychiatric diseases means schizophrenia dopamine or others low and or inactivated receptors and they give antipsychotics despite that and as they give partial dopamine agonist like third generation antipsychotics helped means old generations was opposite as dementia and ckd patients died

stimulating vague nerve and moving like exercising during completing daily activities comes with good outcomes as it is allow you to fix appearnants more quickly as you are urgent to other activities like exercising during or after completing that activities or that is delusions or false

initial and recent means whole tumor cells stays in synthesizing state or mitosis process like in its last step stucked or green state growing not settled like synthesized health cells which make it more vulnerable to circulating poisons which typically acts as antimiotics and antimiotics

which sneaking in synthesizing molecules requested by tumor and die typically

neurological disorders are neurophysical disorders

as curing cancer curing other diseases like neurodegenerative diseases and cartilage diseases

all coenzymated molecules like b6 as pyridoxal 5 phosphate and coenzymes for akathisia

all sleep and wake disorders is sub of neuropsychiatric disorders as all anxiety disorders is sub of neuropsychiatric disorders as anxiety from neurological disorder and or psychiatric disorder and sleep disorder from neurological disorder and or psychiatric disorder like psychosis as neuropsychiatric disorders term will cover neurological and psychological disorders but not neurological disorder only like brain tumor which covered at neurological disorders except if it is with psychological disorder like psychosis and

neurological disorders term cover neurological disorders only not even psychological disorders but if psychological disorder appear in addition to neurological disorder it is will be covered under neuropsychiatric disorder

combining dopamine agonist and nicotine reversing more antagonized or artificially bounded or affected receptors as stimulants like caffeine reversing water retention from chemicals like antihistamines or anticholinergics as i take dopamine agonist and nicotine both in patches and natural multivitamin and b6 and iron and lecithin and fulvic acid and chicken and sugars and i felt normal back like before forced antipsychotics

brain cancer molecules for brain diseases like epilepsy and neurodegenerative diseases in addition to nutrients like what i take natural multivitamin and b6 and iron and lecithin and nicotine and dopamine agonist and fulvic acid and chicken and sugars

the body have viruses and bacteriophages but in dormant state as it is have lot inactivated collection and diversities like variola virus and it is activating or use them if there is abnormalities like infections or diseases like initiating tumor as defense or repair or detoxifying tool like by its countless or sophisticated or broad spectrum modulating activities as sometimes induce rash and by stimulating producing hypochlorous acid or by doing its activities and finally after that stimulating producing hypochlorous acid inactivating it as seen universal rash which is typically detoxification sign acid which means they are part of the body defense or immune system as they used inpt for lyme disease

garlic helped cancer as antiparasitic

hotting cells regenerate healthy cells like for neurodegenerative brain cells means the same way cure cancer for neurodegenerative diseases and other diseases

hotting tumor activities was not enough disappearing tumor as mild intratumorly or topically hotting activities was only in small tumor site which will producing only few immune checkpoint inhibitors antibodies which not enough for grown tumor means need hotting full tumor and around cells and other body areas and systematically hotting by circulating toxins enter most body cells including tumor and damaging them causing repair needing as injured tumor site by intratumorly hotting activities and about the toxins like poisons like amygdalin and stimulants like nicotine while not with neutralizers like chlorine dioxide all those will increase immune checkpoint inhibitors antibodies while hotting tumor more and that is why hotting other cells or areas in the body helping tumor like by stinging or ckd elevated toxic circulating molecules enter most body cells and damage or stimulating them which causing huge immune response producing immune checkpoint inhibitors antibodies to access to abnormal cells to repair them including tumor and sometimes cause tumor lysis syndrome or ingested poison enter most cells and damage or stimulating them which causing huge immune response producing immune checkpoint inhibitors antibodies to

access to abnormal cells to repair them including tumor and that is why disabled what spontaneously hotting cells like universal rash like from what called smallpox to prevent spontaneous tumor lysis or body repair or detoxifying infections as i never see my affected self getting fever or universal rash

antibodies synthesis or factors related to cancer as immune checkpoint inhibitors antibodies

antibodies formed first to counteracting abnormalities like infection

poison is simply unknown molecule before to the body does not know how to process it so it is call its last resort solutions

poisons or most poisons antimiotic as chemotherapy drugs like paclitaxel for cancer

rapid diving cells receiving poisons more as they are sensitive to poisons or as they or their dna replicating more demanding nutrients like circulating molecules like proteins which including poisons passing from tumor root to surface

they use yew because it is selectively more cardiotoxic and other negative effects which means like undesired poisons like some animals venoms other than poisons or what called poisons like amygdalin and boosted with toxic chemicals for cancer

what found in egg whites like lysozyme antibacterial like for lyme disease

what related to cellular respiration like amygdalin and dmso for cancer

osmotic pressure defective in tumor

ckd have no or decreased molecules present in blood like proteins or steroids or phytosteroids which releasing brake making body lysing tumor

what high circulating molecules in ckd causing tumor lysis syndrome

uric acid not released from tumor and causing tumor lysis syndrome as kidney patients have high uric acid

what related to tumor lysis syndrome elevated molecules like uric acid or phosphate or potassium like binds with uric acid or its receptors or transporters or having chemicals similarities or using same pathways like chromium and sulfate or reductants or what have reaction with or neutralizers for cancer intratumorly causing uric acid or phosphate or potassium in tumor to react and lysis or apoptosis and systematically and hotting tumor and means abnormal uric acid and phosphate and potassium and what related factors like bicarbonate transporters in tumor site

boron or boric acid toxic for cockroach and parasites means minerals or their acids for cancer

growth molecules for injuries like spinal cord injury

enzymes specifically hydrolyzing abnormal stem cells or stem cells for blood cancer

human brain components like dha for brain tumor

any lipids is stimulating brain specifically as seen steroids like cholesterol and vitamin d and most fatty acids like pufa 20:5 which called epa and pufa 22:6 which called dha which all found like in fish oil and cannabis or cbd oil which related to cannabinoid receptors in brain and lecithin which related to acetylcholine in brain and olive oil and neurotransmitters elevators or releasers like previously mentioned lipids and stimulants like nicotine and ptms molecules and activities like showers for brain cancer and

reproductive organs cancer and head and neck cancer as after i take fish oil which contains steroids like cholesterol and vitamin d and fatty acids like pufa 20:5 which called epa and pufa 22:6 which called dha and added vitamin a as lipids elevating or releasing neurotransmitters and stimulating brain more than most lipids i slept and i ejaculated during sleeping means fish oil stimulating brain and stimulation means make the area alive or active which repairing and preventing abnormalities and means high prolactin inhibiting its cells or producing cells means inhibited or inactive cells causing tumor

mobilizing agents like plerixafor for solid tumor as they release stem cells and immune cells to blood which increasing tumor detection or sensitivity or blood cancer as hypochlorous acid present in blood detoxifying abnormal stem cells or allowing body to recognize more stem cells as they in blood not bone marrow

mobilizing agents like plerixafor and chlorine dioxide and apheresis can be used as pretreatment to emptying bone

marrow for bone marrow transplant

mobilizing agents like plerixafor for blocking receptor that holds stem cells in the bone marrow causing stem cells release to blood means now bone marrow semi empty or empty and giving chlorine dioxide and or hypochlorous acid intravenously killing more cancerous stem cells and may be apheresis collecting abnormal stem cells means now empty bone marow and no cancerous stem cells and no cancerous wbc means blood cancer can not return and the body with correcting deficiencies will normally start again producing healthy stem cells not causing blood cancer means cured or need stem cells transplant which also have graft versus leukemia effect

growth molecules like growth factors like g csf may be with mobilizing agents and height molecules and spinal cord injury molecules and wound molecules and antiaging molecules accelerating bone injury healing

bone molecules or prebone molecules or cartilage molecules or precartilage molecules filling for broken bones

what molecules spike or released after sex for depression and anxiety or may be needing like that physical activity which like exercising like swimming or meditation like praying

oxidants work oxygen donors and tumor cells acidic have many hydrogen molecules but not oxygen molecules and when oxidants given oxygen and hydrogen combine and produce water and that alkalize them and many people benefitted from them

what molecules spike or utilized or depleted in food intake or sex like neurotransmitters and steroids and neutralizers molecules for nutrients processing and energy sources

flushes after alcohol or alcohol flush reaction no nutrients processing molecules like neurotransmitters like high

dopamine or neutralizers molecules or minerals like fulvic acid

fasting cause high neurotransmitters like dopamine and acetylcholine and activating all receptors like dopamine as neurotransmitters to metabolizing or processing or burning or eliminating or detoxifying nutrients like lipids and sugars and minerals and proteins

high dopamine or dopamine agonist cause rls augmentation or arm pain or interrupting sleep multiple times or psychosis or excitement or negative symptoms need or demand nutrients or demand nutrients and acetylcholine agonist like nicotine or need just acetylcholine agonist like nicotine as high dopamine sign from hungriness like fasting which also burning body nutrients like sugars and in same time demand food as with any drug like stimulants like alcohol and cannabis recommending or need eating before and may be after which causing high neurotransmitters but artificially high dopamine alone interpret as restlessness and any high dopamine and other

neurotransmitters like acetylcholine interpret as hungriness or severe hungriness including vomiting from very high neurotransmitters

giving dopamine agonist and nicotine or just nicotine both like in patches for rls or rls augmentation and arm pain and other factors like iron and b6 and natural multivitamin and fulvic acid and lecithin and chicken and sugars and sex and showers

tumor lysis syndrome from kidney disease something hotting tumor like injury or tightened causing temporary systematic response like inflammation which hotting tumor more and blood which contain toxic proteins drawn to the tumor site and causing tumor lysis syndrome

hotting tumor molecules support systematic treatments like poisons like from plants like amygdalin by drawing attention or body molecules like fluids like extra concentrated blood including circulating amygdalin which

called increased drug delivery and immune cells and other factors to the affected tumor site which its doors open which signaling molecules to enter means exclusively receiving them while other so far unaffected cells doors closed means there is open doors meeting in that prioritized tumor organ and about chlorine dioxide by inducing sores on tumor surface repair factors like immune cells will reach this time from tumor roots to surface by chlorine dioxide helping oxidizing proteins coating roots preventing body molecules like immune cells from reaching surfaces for sores and repairing tumor or chlorine dioxide and body molecules will reach sores and repair tumor as hotting tumor

gene mean generator and every gene protein but not every protein gene

lungs issues occur before or with breast cancer like lungs detoxifying breast toxins

they said when they give substances mimic tgfb 1 the one moving fast in blood have more effects means circulation needed for body maintenance or increase communication in body or reaching maximum benefits from activating receptors or in simple words to maintenance reliable positive processes or positive connection sensed or they mean moving fast in cells

spinal cord injury same cartilage diseases and bone diseases

that plant for spinal cord injury for regrowing teeths

water plants or sea plants or water purifying plants have more experience with fluids and body fluids related to tumor

sunshine as radiation therapy for tumor

while leaving phone sharing wireless charging with another phone i was near with my hands and i felt fully stimulated and mildly shocking with electricity for seconds only from that ongoing shared electricity wirelessly means delirium patients or stupor or paranoid or delusional or intoxicated or schizophrenia or bipolar disorder or parkinson patients more vulnerable to radiation around like from deficiencies in skin protecting layers like not formed or partially formed both from modifications or no active molecules in cells or continuously passively transported or circulating protecting from energy waves or sources or electromagnetic broad spectrum and mechanical waves or it is just from eating wafer raised temporary hyperglycemia or contaminated with insects materials as it is was prolongedly exposed to air or sugars was cofactor for processing what i take before in the far morning administering almost like in fifteen minutes natural multivitamin from kaged brand two capsules results 100% daily value and b6 as p5p from swanson brand two capsules results 80mg or 4706% daily value and iron as iron bisglycinate from nutrabio brand two capsules results 38mg or 200% daily value and lecithin as sunflower lecithin from microingredients brand three

softgels results 4800mg and nicotine as quarter nicotine patch results 5mg and dopamine agonist as rotigotine 1mg patch and fulvic acid and chicken as patties as i felt after wafer with sugars warm and some cognitive improve after that and i slept without abnormally waking up early like from dopamine agonist alone and i wake up less sick or weak and restored cognitive and still improving even after three days and reversed fatigue or energy as like staying awake more without needing early sleep and all molecules suitable for akathisia which requiring select supplementing as less or almost no akathisia seen and unseen never anxiolytic for anxiety as almost no anxiety residuals like old oil preparation and adhd and depression and increasing alphabets or words or expressing intake or output but all or nicotine patch and non selective dopamine agonist patch either individually or both caused multiple sudden involuntary head jerks like cold jerks both called myoclonic jerks as stimulants aka sympathetic nervous system stimulants cause jerks and nicotine and excitatory neurotransmitters like dopamine or dopamine agonist both is stimulants and like from more than three days administering high dose nicotine and non selective

dopamine agonist combined and either or both in more high dose not chronically or chronically alone or with high blood pressure causing rls augmentation as i take high dose caffeine in green tea caused rls augmentation and small dose caffeine helped means taking very small dose from both stimulants or taking either alone like nicotine or non selective dopamine agonist and means sugars indispensable and initially may negatively appear like forgetfulness but after that getting used like several days will not cause forgetfulness like initially but improving cognitive and overall health as god permanently and firmly said honey is healing for men and all or most previously mentioned molecules for all disorders like nervous system disorders like neurological disorders like brain disorders like brain tumor and like neurodevelopmental disorders like autism and like neurodegenerative diseases like parkinson and like movements disorders like akathisia and restless legs syndrome and continuing after previously mentioned neurological disorders and like neuropsychiatric disorders like anxiety disorders and like depression disorders and like delusions disorders like paranoia and psychosis like schizophrenia and bipolar disorder and like adhd and like

sleep and wake disorders and fatigue and continuing after previously mentioned neuropsychiatric disorders and like energy disorders like fatigue and metabolic syndrome and diabetes and disabilities or all that was categorical test hhh and means high dopamine or dopamine agonist causing rls augmentation or arm pain or interrupting sleep multiple times or psychosis or excitement or negative symptoms need or demand nutrients or demand nutrients and acetylcholine agonist like nicotine or need just acetylcholine agonist like nicotine

using phone wireless charging share or wireless charger or bluetooth receiving behind and bluetooth sending front and tumor in middle or ir or uv or speaker as djs not getting cancer as radiation therapy for tumor and hotting tumor

any disease like ckd or schizophrenia or diabetes have high blood lipids and proteins and sugars these substances not metabolized like from no ptms molecules and trace minerals or processed like from abnormal neurotransmitters or detoxified like from no hydrolyzers

enzymes and all that can be from exist poison or its residuals like chemicals like vaccines or infections

schizophrenia patients die from heart means they have elevated lipids and proteins like hemoglobin as high hemoglobin related to heart disease

diabetes bone marrow disease

ckd caused by infection with its enzymes hydrolyzing body molecules like albumin in the blood or gut

kidney cancer treatments for ckd

ckd caused by high blood proteins like creatinine and urea and any proteins like systematic proteins or waste proteins like long term muscles tears or rhabdomyolysis uncleared because no enzymes for myoglobin or old body proteins or unprocessed proteins and they are toxic and generally have

inverse relationship lowering needed proteins in the blood like albumin and egfr or proteins which drive kidneys to work as cells like kidneys sensitive to molecules like proteins levels in the blood in realtime reacting or dependent like insulin cells to glucose level and preventing kidneys from functioning and body from functioning like repairing kidneys or all proteins like collagen faced including mentioned toxic proteins accumulated in kidneys cells or kidneys cells proteins expired not replaced from no enzymes to hydrolyzing them first and synthesizing or enzymes repair them like old collagen in cartilage diseases means enzymes diseases like pancreas diseases before ckd and proteins decreasers like chlorine dioxide and dmso help

cartilage diseases from old collagen not detoxified from no enzymes and not replaced and chlorine dioxide and dmso help systematically and topically and injecting as enzymes like wobenzyme help osteoarthritis

when someone ate animals or eggs and he felt his heart

like heart attack from heart enzymes deficiency or from ongoing antihistamines and anticholinergics and ppi effect not reversed which stuck digestive tract affected heart

indigestion is stuck digestive tract and need support mainly from body or last resort from heart as warehouse like its fluids or enzymes or molecules to be used and if largely depleted may cause heart attack or caused when the unhealthy body drawing attention to digestive tract and leaving other organs

someone after eating affected with nausea and vomiting and belly pain and cold sweating like from cold body and they said from indigestion i think from antacids or antihistamines and neutralizers molecules and processors molecules and energy molecules depleted and they said caused heart stroke or meaning heart attack after ekg and heart enzymes test or from elevated lipids like cholesterol or proteins like hemoglobin or spices from that food with preexisting diseases

unmetabolized or unprocessed lipids in the blood causing less cognitive and decreasers like chlorine dioxide help

i take ice cream and burning mouth syndrome disappeared as coldness induce accumulation of relieving or soothing or relaxing molecules like neurotransmitters and lipids like steroids and neutralizers in cells by drawing them to affected cells or letting cells reset by rest means ice bath for inflammation and autoimmune disorders and overall health

stomach cancer anciently was mostly from helicobacter pylori ulcerating or hot food

eating food draw neurotransmitters and energy molecules and neutralizers to ingested food area which sometimes decrease cognitive

cancer happened when no even small amount proteolytic

enzymes like from pancreas dysfunction to hydrolyzing small amount abnormal cells and the tumor grow which also getting out from maintenance area which requested enzymes and it is be outside growing

injecting cancer plants like tobacco or cannabis or amygdalin as fluid intratumorly or topically rather than systematically or combined for cancer

injecting neurotransmitters or agonists or stimulants intratumorly for tumor

alzheimer brain cells die from no oxygen or glucose

lipids and sugar metabolites both for or related to steroids and hormones synthesis for akathisia as antipsychotics cause hypertriglycerides and hyperglycemia

giving natural multivitamin and or minerals and or zinc for

short period for cancer patients specially who received chemotherapy to restore necessary enzymes nutrients or for all diseases

glycerin for heating as it is warming

i take ionic minerals or fulvic acid and i felt cold like absorbing or processing or metabolizing molecules like transporter lecithin and vitamins like b6 and anemia molecules like minerals like iron and b6 and neutralizers molecules like steroids and hydrochloric acid decreased and giving that molecules for muscles diseases like cold and oxygen deficit

corona not affecting who removed tonsils

giving minerals with stimulants to metabolizing and processing them as it is helped me or just from minerals

after prolonged stress my memory abnormally affected i take green tea and 4ml ionic minerals or fulvic acid acting like mood stabilizers as lithium mood stabilizer and mood stabilizers stabilizing new ideas thinking like its band in brain or level or frequencies or stabilizing making new decisions with its bases or information or core or relators while keeping gathered information present or realtime available and not suddenly interrupting pending thinking or reasoning or request like requested retrieving but respondent not mood stabilizers means it is just increasing or helping requests demand or making requests with their timeout or simply memory or reasoning retrieving requests and until now my memory still affected need natural multivitamin and b6 and iron and agonizing antagonized dopamine and or dopamine substrates and sleep hormones which repair and acetylcholine substrates like lecithin and steroids like cortisol and testosterone and estrogen and progesterone and protein and insomnia and waking up early and akathisia returned like after antipsychotics and st john wort which increasing metabolizing body molecules like hormones means these molecules related to akathisia as antipsychotics stop producing substances or producing

defective substances and remaining normal substances utilized and shortly symptoms appear

defective dna replicated missed taking steroids materials like receptors and cofactors information from nucleus like retinoic acid or steroids deficiency or defective steroids or substances mimic steroids and that information to make it male or female necessarily or not delivered steroids to cells while building like from clogged or toxin bounded steroids receptors and injecting steroids intratumorly help

and means breast cancer from antipsychotics by nucleus like palmitate which combined with paliperidone sneaked to dna synthesis

every tumor have steroids receptors and neurotransmitters or transmitters receptors and modulating or binding or detoxifying with plants steroids receptors binders or modulators or influencers or estrogenics or relators and plants for neurotransmitters or transmitters like gases like nitric oxide like from nitrate from plants producing gases and plants for hormones like thyroid hormones as synthetic thyroid hormones caused cancer and menopause or menopausal hormones like progesterone and sex and

pregnancy and reproductive organs and breast and lacting and prolactin and adrenal like adrenaline and sleep and sleep hormones and other hormones and bone marrow diseases like blood diseases like blood cancer and bones and brain cancer and oxidants and skin and sores and acne and cysts and warts and psoriasis and ulcers and disability and paralysis and poisons and aging and energy and circulation and seizures and immune and spleen and lymphatic and tonsils and autoimmune and pain and blood vessels and heating and cold uterus and diabetes and diabetic ulcers and ckd and cartilage and lungs and oxygenation and vocal and fatigue and skin and eye dryness and fluids and mucus and phlegm and sweating and depression and psychiatric diseases and ear and pancreas and smell and blood thinning and growth like tgfb1 for diseases like tumor and toxins

high dose steroids helped cancer as steroids receptors into tumor clogged with toxin and it is clear it

seizures is neurotransmitters diseases like infection

causeing excitory neurotransmitters release

someone wake up tired and very sick or weakness like in chest and belly and lower body and not wish to live and after minutes he feel less tired means the transmitters or neurotransmitters increased in chest and belly and lower body means autoimmune diseases like multiple sclerosis and akathisia and parkinson worsing by neurotransmitters diseases or imbalance like high glutamate and noradrenaline which increase after hours from waking as multiple sclerosis worsening in the evening means neurotransmitters for weakness and sickness

males imitating females and sex edging or prolonged sex activities like alone sex thinking or dreaming or wanting or touching or another male giving hugs or anal sex without ejaculation or less times from what supposed for that prolonged time compared to straight male who will ejaculating multiple times during that prolonged time all that increasing females hormones and as i wrote before prolonged sex edging or stimulation without ejaculation

deplete nutrients more than with intent to ejaculate and ejaculating happened and not trigger reliable replenish and not give reward or not receiving reward and kept in seeking reward state or interesting in sex all day or مفسدة all day or عنت

cancer cells like parasites as they blank cells without typical normal cells molecules and antiorganisms like antiparasites toxic to parasites and mostly to cancer cells not healthy cells means antiorganisms like antiparasites plants like yew for cancer

adenine sabotaged in cancer

adenosine

injecting glycerin to increase water intratumorly as cancer dry

edema inducers intratumorly as cancer dry

tumor cells deficient in molecules like transmitters or neurotransmitters with their receptors or signaling molecules with their receptors or immune cells receptors

hydrolyzing enzymes contain radiation or electromagnetic waves or frequencies or electric charges or uv or ir or gases or oxidatives or neutralizers like hypochlorous acid or ammonia to just signaling another protein to dissolve as microwaved or heated or sun dried or long term stored enzymes not work

tumor consist from either dna or rna or defective rna and normal dna or defective dna and normal rna or both defective

abnormal dna or wrong dna in the sub but the origin have

normal dna contaminated or stucked or bounded with toxin causing defective replication means replicated dna or cells flew from getting molecules like nucleus or pyramidines for repair or allowing body detecting them or their builded cells or builded cells without typical molecules allowing detection means injecting normal cells enzymes and signaling molecules and immune cells and isolated cells molecules or nucleus or pyramidines intratumorly and detoxifying origin

some what called cancers by hormones deficiency like progesterone in menopause womens have endometrial tumor and by high hormones like prolactin in prolactinoma or it is the cause for high prolactin or high hormones and molecules like psa in prostate patients

prostate cancer is not cancer as it is just elevated molecules like psa antigen

tumor is not defective nucleotides like dna or dna copy error

but the nucleotides or dna growth brake not active or abnormally outcontrolled as normal always active allowing slow growth and regulate process

tumor deep initial cells not repaired dna and it is grows and appears as sub means destroying surface or sub with radiation or chemotherapy limited intratumorly will not disappear as the root or origin not targeted with that as destroyed sub or upper will still repairing from defective origin or lower dna

but does tumor repair from down or just for organs or linear like sides if from linear or sides means tumor occurred by damage to site and stays spreading towards sides but most tumors arise from down

but the sub and origin same as the sub spread to healthy cells means as the sub destroyed the origin can be destroyed

no enough dna bases like pyramidines for repair in cancer and increasing pyramidines will help as they said

pyramidines derivatives anticancer like fluorouracil but will increase tumor growth or will help as tumor building from damaged bases means repairing localized tumor site or organ bases or pyramidines pathways and producers and receptors and transporters

nucleus molecules in the body like retinoic acid which bind to its nuclear receptors by increasing them will elevate detection sensitivity for cancer or injecting intratumorly as retinoic acid for apl

nitrogen containing molecules like plants or poisonous plants or alkaloids directly affecting nucleotides like dna or stimulating dna to repair as dna bases pyramidines which contain nitrogen and carbon or affecting dna bases like pyramidines and for cancer

brain diseases by accelerated aging and natural destroyers in the body

ckd no transmitters or neurotransmitters or signaling molecules to make fluids penetrate cells membranes like filters to get exerted as shower increase neurotransmitters to process skin absorbed water

injecting substances need neutralizing or processing like chlorine dioxide or bicarbonate or acid or minerals intratumorly and the body will send different molecules to the stimulated tumor damaging the tumor also

transmitters or neurotransmitters like acetylcholine and or signaling molecules first responsible for sweating and fluids secretions as choline known for sweating and dopamine to quickly discharge semen and antipsychotics caused dry mouth and anticholinergics like atropine used before surgery to reduce excessive saliva and respiratory tract secretions means vaginal dryness like from menopause from blocked neurotransmitters like acetylcholine or no acetylcholine or choline or accelerated cholinesterases like acetylcholinesterase and need treating that or the menopause and the other causes from no fluids

from no neutralizers like bicarbonate and minerals like iron and vitamins like b6 and lipids like steroids like progesterone which heating body related to fluids by bringing hot fluids or ions to the fluids or activating factors in the cells as transmitter or signaling molecule or estrogen as red clover for menopause vaginal dryness or no gases like hydrogen as helped dry brain or sugars like glucose or its related impairment like diabetes or no glycoproteins from no glycosylation or and vaginal dryness and menopause treatments will treating or restoring also neurotransmitters like acetylcholine and steroids like progesterone and eyes dryness and treating related tumors caused by substances like fluids or hormones deficiency or imbalance like endometrial and cervical and brain and thyroid and breast and prostate and injecting neurotransmitters like acetylcholine or vaginal dryness molecules intratumorly as tumor dry

narcissism like euphoria and mania and paranoia and psychosis and caused by steroids like testosterone and cortisol and estrogen and male and solidity substances like

testosterone and female substances like estrogen and menopause substances and fear or pain or stress or awareness or sporting adopted or elevated substances like steroids like testosterone and cortisol and adrenaline and neurotransmitters and stimulants and psychoactives like cannabis and alcohol and hallucinogens like psychedelics and dissociatives like phencyclidine and antidepressants like benzodiazepines and ptms molecules like sam e and mood stabilizers and opioids and sedatives like diphenhydramine and sex

disinfectants like chlorine dioxide helped diabetic wounds with detoxifying as amputation naturally healing the wound contaminated and it is indicate the immune cells not producing hypochlorous acid which also for oxidizing proteins like hemoglobin in the body as immune cells counteracting contamination by producing hypochlorous acid and delivering it to cells extremities

bicarbonate for toxic proteins like venoms as milk main ingredient bicarbonate in form calcium carbonate as it is

reacting to acetic acid and contain enzymes

inducing kidney injury for cancer

poisons like amygdalin damage tiny amount of all cells and the body make systematic response which also affect cancer means radiation therapy on different areas better than on just tumor and will have same effect like amygdalin

disinfectant gases like chlorine dioxide stimulate any receptor or cell or surface means universal agonist or modulator but oxygen does not do that mostly means sometimes needs different molecules like ions like sulfur dioxide and nitric oxide and carbon dioxide means every gas selective agonist or modulator

after unknown chemicals and antipsychotics and daily sex and showers i stayed awake from ten am to second day eight am and before that i listened song multiple times and after that i heard same song without device and i shocked it

is disappeared like from adrenaline and cortisol means substances produced in and detoxified by and related to sleeping for hearing voices

everything like substances their mechanisms of action is contact with others materials like human cells with radio waves or frequencies like hormone bounded to its receptor and and the same effect achieved with frequencies alone and sometimes it is need donates or ejecting physical materials like ions but mostly need signaling like radiation therapy

stopping sex after months from doing that daily like stopping cocaine cause needing to do that or cravings or withdrawal symptoms like agitation or dependence

arm pain before sleep after stress and excitatory or agitated brain and high blood pressure after antipsychotics and also non selective dopamine agonist causing that

respiratory cancer like lung from nanoparticles or minerals like hexavalent chromium and plastics like bpa and phenols

injecting or inhaling bicarbonate for hexavalent chromium lung cancer

breast cancer after antipsychotics there is bounded chemicals in breast and topical chlorine dioxide and dmso help

inducing sores by topical allergens on tumor and or injecting adrenaline intratumorly

chlorite or sulfate substitute nitrate in meat

chlorine dioxide and dmso tendering meat

administering proteins binds to graphene oxide in blood stream and excreted or body proteins like albumin and

hemoglobin already bounded with toxin like graphene oxide denatured or oxidized by chlorine dioxide and excreted or glutathione binds to graphene oxide and excreted or administering edta or ionic minerals like fulvic acid and zeolite and sea water and stimulating metallothionein or magnetite or metal cations like ca2 and fe3 and cu2 and mn2 and mg2 and al3 or cationic dyes or drug delivery molecules like polycations like cationic polysaccharides like chitosan or polyethylenimine or polycationic peptides like protamine or alcohols like sugar alcohol or nucleotides like uridine or uric acid or benzene rings or aromatic groups or nonpolar organics like solvents like kerosene or lipids like olive oil and phospholipids or bile salts or polyamines like spermidine or polyphenols like tannic acid

high dose glutathione and nac for any poison overload like tylenol poisoning and chemotherapy poisoning to detoxifying or reducing or oxidizing the toxins as it is the body reductant or oxidant or detoxifier

two dimensional molecules like graphene oxide fit in any

receptor means accumulating in all receptors preventing their natural molecules to bind causing systematic dysfunction as all bioactive molecules are three dimensional and if denatured or not shaped as supposed will not fit in their receptors and it is easy physically for two dimensional molecules to fit in any receptor

methylene blue smoothing hair as increasing mitochondria

tumor not have minerals injecting fulvic acid and sodium and bicarbonate and calcium in contrast to tumor lysis syndrome

new york residents exposed to mold like penicillium species and cockroach like german species and spiders materials and ticks as i left m and m candy licked without dyes and after months turned to blue in the room and the mirror and wood metals like stainless steel or aluminum turned blue in the bathroom

high dose glutathione for cancer

calcium high not metabolized in cancer

detoxifying mineral like hexavalent chromium with related chemically or binding receptors or transporters or inverse relationship like sulfite

chlorine dioxide and dmso and enzymes and glyclation and lipidation and internally increasing glyclation and lipidation smoothing hair

tumor lysis syndrome symptoms required to destroy tumors as high blood phosphate pulling phosphate from tumor like iron if the body not have enough iron will not absorb iron and sodium most mineral absorbed because it is highest mineral in blood and for immune system like detection means cancer can not live in high phosphate and potassium and uric acid

preventing tumor lysis syndrome with sodium bicarbonate and calcium carbonate during and after cancer treatment or chemotherapy or radiation

in tumor lysis syndrome releasing potassium and phosphate and uric acid and in cancer high calcium blood levels means no calcium in tumor and calcium not deposited or transported to tumor cells or no ptm calcylation and injecting calcium intratumorly as it is calcium flooded in brain or neurons and mitochondria after oxygen lack activated destructive enzymes and the women lactating not getting breast cancer as calcium present in breast and prove body not have enough neutralizings molecules like bicarbonate for uric acid

no calcium in tumor selective mitochondria bounded to

toxins or low or high mitochondria ph

tumor lysis syndrome is tumor breakdown releasing toxins collected before such as from lymph fluid as they said lymphoma

most organisms and cells need only oxygen and water and sugar like glucose

chlorine dioxide and honey and protein

endometrial cancer or cervical cancer from menopause or postmenopause

as they treated some people with progesterone

they said alzheimer is brain cells dying it is from no oxygen and glucose as brain cells almost only rely on oxygen and glucose

ingested fibers like apple pectin or dyes like prussian blue detoxifying ionic radioactive minerals in belly by binding or excreting them in feces and the organs draw ionic radioactive minerals again from blood to belly as they said prussian blue results in reduced enterohepatic recirculation of thallium like bile acid sequestrants lowering cholesterol

dyes or fibers or activated carbon detoxifying nanoparticles in walls or tubes like intestines as it is push the body to detoxify walls from adhesives nanoparticles like dyes or anything like ionic radioactive minerals or organisms and it is stimulate macrophage to engulf them and detoxifying vessels like from calcification

for lung

suspending hydrolyzing enzymes in food with radiation or chlorine dioxide

radiation for breast cancer enough after correcting abnormalities by antipsychotics by restoring dopamine and

its receptors and others antagonized receptors and balancing prolactin and detoxifying residual chemicals

most diseases like diabetes and hiv not producing or producing not enough hypochlorous acid as the cells use it in wounds to disinfect toxins from cells which signaling to not repair like diabetic ulcers

most diseases or diseases like autism and alzheimer have infection such as virus that forming or formed proteins or spike proteins or the body abnormally or accidentally in specific circumstances like in childhood forming or formed proteins accidentally resistant to most hydrolyzing enzymes like hemoglobin not decreasing in diabetes

chlorine dioxide oxidize almost all proteins like poison spike protein or any permanent protein formed and circulating or deposited after vaccines or chemicals or infections as it is decreased hemoglobin

seizures people when they take chlorine dioxide may be get some seizures as proteins oxidation as they said p450 inducers caused seizures but while detoxifying belly and blood and vessels and organs and body

nicotinic receptors and endocannabinoid system regulation by nicotine and cannabis for diseases like neurological diseases

pause cell cycle suppress cancer totally

low phosphate and no phosphorylation like to activate tp53 in cancer

reversing valve regurgitation as they said caused by 5ht2a agonist from ergo derivatives with 5ht2a inverse agonist or antagonist

titanium dioxide and silicon dioxide strong substances

resistant to many degraders or reducers and even detoxifying as nanoparticles and to accumulate in the body

magnetized water like inpt

prolonged sex edging or stimulation without ejaculation deplete nutrients more than with intent to ejaculate and ejaculating happened and not trigger reliable replenish and not give reward or not receiving reward and kept in seeking reward state or interesting in sex all day or مفسدة all day or عنت

as the body only reserve small amount for presemen fluid to neutralize vagina

acidity or acidic molecules counteract albumin in kidney disease

treating donor organ transplant with chlorine dioxide and injecting dopamine and dopamine receptors and dopamine transporters and fluid from dissolving diseased organ like

concentrated fluid from the patient for organ rejection

neurotransmitters receptors and transporters synthesis for many diseases like neurodegenerative diseases and neurological diseases like restless legs syndrome

that herb accelerate spinal cord injury and reactivate receptors only activated in childhood for regrowth

herb for spinal cord injury and paralysis

injecting dopamine intratumorly as dopamine receptors in breast antagonized from antipsychotics

poisons like snakebites accelerate or agonizing acetylcholinesterase or antagonizing acetylcholine as they used anticholinesterases like edrophonium

most antagonists binds to the neurotransmitter receptors itself like d2 not the neurotransmitter itself like dopamine and by that preventing the natural neurotransmitter from binding to its receptors to activate them

reversing neurotransmitters antagonists like atracurium antagonizing acetylcholine by inhibiting cholinesterases like acetylcholinesterase and administering acetylcholine leading to increased levels which competes with the atracurium molecules for binding sites on the muscle nicotinic receptors but if strongly antagonized means no remaining open acetylcholine receptors will not work as they require two muscle twitches which indicates not totally antagonized

muscle relaxants poison and antipoison like chlorine dioxide help

prolonged whole body paralysis and sedation such as from muscles relaxant like high dose atracurium or their

anaphylactic shock mistaken as coma sometimes

corona virus blocking fluids factors or sweating factors causing hyperthermia and fluids or sweat inducers like acetylcholine agonists like stimulants like nicotine or spices help and meaning it is acetylcholine blocker or continuous potent agonist or agonist initially causing transient sweating and blocker finally block sweating and reversed with sweat inducers and also it is atp inhibitor

reversing coma after injection by injecting chlorine dioxide and dmso in the original site same as previously injected and topically and intravenously

injecting transmitters and signaling molecules intratumorly and around help repair nucleotides and tumor

very low or defective iodine in western salts

severe low steroids including neurosteroids in schizophrenia as i did sex with malnutrition and diseases and as they die with heart and treated with steroids

ivermectin and fenbendazole toxic to cancer cells and or activate immune system

injecting immune cells products like perforin and granzymes intratumorly

liquid cancer people have zero or low immune cells as when they transplanted stem cells with immune cells have graft versus leukemia effect means supplying immune cells products like hypochlorous acid will help

injecting chlorine dioxide and hypochlorous acid and hypobromous acid intratumorly

tumor cells deficit from oxygen because there is no reduced

minerals like fe3

ammonia needed for protein detoxification like amyloid and hemoglobin as urea is waste of proteins metabolism and ammonia converted to urea

hypochlorous acid and hypobromous acid and hypoiodous acid and hydrogen peroxide and hydroxamic acid and superoxide and nitric oxide like chlorine dioxide

ethanol
singlet oxygen
peroxynitrite
nitrogen dioxide

we ingested metals like hexavalent chromium from oxidizing stainless steel cooking pans

tumor not reduced totally because chlorine dioxide not

injected to whole tumor including the root but intradermally and not given orally

exposure to sunshine more than usual not cause skin cancer but prevent skin cancer while short time cause skin cancer

any poison alone like chemotherapy

platinum alone like chemotherapy based platinum as iron causing ferroptosis as minerals oxidants

chemotherapy damage cells like dividing cells more by platinum and alkylating to make them detectable to immune system and the immune system destroy them and continuing synthesizing new abnormal dividing cells

chemotherapy platinum or minerals deposited in tissues stimulate immune response like to start shrink

vacuum therapy for lungs have adhesive substances

metals reducing agents like reducing hexavalent chromium for cancer as chlorine convert trivalent chromium to hexavalent chromium and chlorine water already contain chlorinated minerals or chlorinate body minerals producing minerals like hexavalent chromium

warm chlorine dioxide delivered to the body better than cold solution

cancer cells deficit in oxygen red blood cells not entered what molecules carried or found in red blood cells increase them or inject them intratumorly

chlorine dioxide not for plastic nebulizers or humidifiers as it is degrade plastics and leak them to the lungs but may harmless and substituting with glass or silicone or titanium or stainless steel like 316 or 316l or 304 or pp or pe ptfe or

pvdf or spray manually

no hydrochloric acid and its heme relation or chlorite or halogens or chloride or halogens metabolizing or processing no oxidative hypochlorous acid will be made by immune cells to counteract infections and abnormal cells

how to make hypochlorous acid from sodium chloride or hydrochloric acid

giving dopamine agonist before and during and after treating breast tumor induced by antipsychotics

neurotransmitters agonists like nicotine prevent and cure skin cancer

enemas increase solution bioavailability in blood more than oral as orally absorbed from intestines to liver where decrease or most utilized and to blood or stomach acid neutralize ingested gaseous solution

chlorine dioxide in extremely high dose lowering rbc and in regular doses elevate rbc

waking up with some relief for restless legs syndrome after nicotine patch yesterday stimulated producing compounds like steroids and hormones like sleep hormone and processed molecules like lipids and minerals and chemicals and waste and after taking ionic minerals and or noodles with hot sauce showed some restless

nicotine recommended dose 2mg or 5mg patch per day as 100g tobacco leaf contain 2% or 5% nicotine

most cancers caused in organs like breast by its receptors such as something bind to them or dysregulated by its parental regulators like prolactin and what antipsychotics block so detoxifying the receptors will not reoccurring tumor

chlorine dioxide soap prevent and cure skin cancer

the organ will not attacked by immune system if it is connected to central nervous system as the transplanted organ attacked by the immune system because not connected to central nervous system means there is something keeping tumors overconnected to central nervous system or keeping central nervous system overconnected to tumors and what if the central nervous system and brain dysfunction means the brain need sterilizers as metastatic cancer stabilized

biofuels for cancer

injecting tumor with immune cells

they microwave high in morning because concentrated electricity in the cord from yesterday not used

during injecting chlorine dioxide intratumorly while ejecting the needle keep pushing fluids from the syringe until the outer skin and injecting the around healthy cells with another needle to prevent cancer cells leak to healthy cells and this is rare specially after chlorine dioxide

giving chlorine dioxide orally and intravenously after injecting intratumorly as cancer cells can be leaked to blood after breakdown

gases like chlorine dioxide reach or binds to all receptors as it is carried by red blood cells like oxygen

chlorine dioxide for rhabdomyolysis as it is oxidized and decreased proteins like hemoglobin

heart pain during performing sudden unusual high level intense exercising without sufficient prior gradual practicing is lack of oxygen and increase in carbon dioxide and no energy

adhd is symptom from chemical injury like vaccines and drugs and food ingredients and or deficiencies including malnutrition and soil minerals deficiency and gmo plants and not getting sunshine and can be considered as disease for legal purposes

mixing fulvic acid with acid to produce different gases and injecting tumors and orally

refrigerating chlorine dioxide injection to reduce the sense

herxheimer reaction or flu after disinfectants like chlorine dioxide by ejecting the neutralized toxins from cells like the dead cancer cells and it is circulate in blood or transient hemolysis or oxidized high fatal body substances like hemoglobin so the body response to produce substances or after causing healthy high immune response like after shower or snow or ejaculation denutrition followed by shower

i take premier ph ionic minerals and nicotine and the old sore site reconstructed

laying on left side increase heart incidents that is why the most prophets told us to sleep on right side

skin scrubbers oxidatives for cancer

chlorine dioxide oxidizing old genes and regenerate whole genes including deleted 1p36

methylators acts mao inhibitors

neurotransmitters still breakdown even after irreversible mao inhibitors for example choline have it is enzyme that break it down

inpt they gave stimulant

stimulants and or neurotransmitters acts as insecticides or antiorganisms

tobacco

antipoison

corona virus non selectively disable ptms like methylation and phosphorylation and overactivating mao as betaine and phosphate in wheat germ extract helped patients

methylene blue like methylators as it is cause serotonin syndrome with drugs which like sam e and oxidative

dmso like methylators or methyl donors and mineral sulfide and oxidant gas and solvent and like msm

the body when preventing or treat aging release oxidizing substances which is like chlorine dioxide

chlorine dioxide sterilizing everything in body such as vessels and circulating minerals and proteins and organs as they was rusted

they become anuric after bleach because it is neutralized all toxins including urine ingredients so left only water which can not exerted alone because missing substances but they said high blood urea and it is somewhat like water retention but not the same and they wait until body produce urine ingredients with minerals and protein supplementation or dialysis

chlorine dioxide activating almost all genes or proteins

chlorine dioxide will react with everything specially excessive levels like wbc as they are destroyed when they fight infections and when they injected chlorine dioxide to abnormal lymphocytes in lymphoma means abnormal wbc will be more affected than wbc

corona steroid analog and binds to steroids receptors like androgen

chlorine dioxide helped ulcers by oxidizing nucleotides and regenerate them

chlorine dioxide as oxidative gas penetrate smallest molecules like nucleotides and nano particles like viruses and porous surface more than chlorite

chlorine dioxide or chlorite
reversing or activating tp53

tp90 inhibitor
immune modulator like wb10 and np001
hsp90 inhibitor

lymphoma is not liquid cancer or blood cancer as it is just lymphatic system part tumor or lymph node tumor

paliperidone palmitate change dna or stem cells as it is contain palmitate binds to retinoic nuclear receptors

probiotics enhancement
nutrients
products
coenzyme q
nitrate
steroids
inositol
paba

giving probiotics with nano particles lipid and folates and choline like skin cancer soap

continues nitric oxide inhalation for cancer

chlorine dioxide target or reverse all mutated and deleted genes or proteins

they use retinoic acid in treating apl which there is deficiencies

after chemotherapy before or after mds stem cells transplant without pretreatment like chemotherapy or radiation so that prevent or cure mds and not progressing to aml

or after chemotherapy supporting immune system so that recognize mutated stem cells by fulvic acid and chlorine

dioxide and fish oil as it is contain vitamin a

aml is not necessary name but renaming with acute mds if it is was the cause as they forget treatments used in mds which is the common cause and focusing on aml

depleting amino acids like valine as pretreatment before stem cells transplant in blood cancer to stop stem cells in bone marrow from dividing may not work as the body breakdown tissues protein and supplying cells except if there is continuous depletion and that is not functional

treating the donor organ with chlorine dioxide and destroying the bone marrow and wbc and immune cells and treating spleen with chlorine dioxide before transplant and after that stem cell transplant from same donor or other for organ rejection

pancreatitis not received immune cells as they most time found microbes

transplanted stem cells malfunctioning after time due to deficiencies and abnormalities like heavy metals

transplanted stem cells malfunctioning or blood cancer reoccur

after giving chlorine dioxide intratumorly or intraorganly and or orally for cancer or pancreatitis giving gcsf so it is will release stem cells in blood support the pretreated cells

chlorine dioxide enough for pancreatitis like ulcers

stem cells stored inside bone marrow like isolated environment and when it is transported to blood stream it is contact with compounds like chemotherapy residual poison or platinum forming abnormal blood cells as they give everything needed for stem cells in cell culture except valine and they survived but not divided or grow and they give protein low in valine and leucine and isoleucine and they grew normally but after week no more stem cells they turned to blood cells

blood cancers another pretreatment before stem cells transplant injecting chlorine dioxide and exothermic dmso to every bone marrow destroying them and intravenously and orally followed by stem cells transfusion

and chlorine dioxide intravenously and or orally for less than one month or one time weekly for one month as it is may affect the stem cells before they stick or started produce blood cells

and correcting deficiencies by fulvic acid and nutrients as stem cells not stick as bone marrow fats destroyed

more than one time as it is relapse due to insufficient stem cells transfusion that migrates in different bone marrow last time

or the spleen malfunctioning not producing immune cells or detoxifying cancerous blood cells and need detoxification by chlorine dioxide and replenish

chemotherapy replaced with wbc reducers in blood cancers type leukocytosis like aml as pretreatment before stem cells transplant as it is to eliminate high wbc

after giving chlorine dioxide giving stem cells transfusion and correcting deficiencies for cancers like pancreas cancer and pancreatitis

myeloid neoplasms high abnormal blood cells not detoxifed

ejaculation prevent prostate cancer by producing nitric oxide for erectile

sildenafil

radiation cancer preventing lipids like fish oil and

antioxidants and chemotherapy effect reducers they are preventing damage to cells from any destructive

uv cancer

pancreatitis
pancreas cancer
causes
bone marrow
stem cells producers

diabetes damaged bone marrow and cancer treatments like chemotherapy for bone marrow or myeloid neoplasms or chlorine dioxide or poisons causing methemoglobinemia reversing that

t cells tumor or lymphatic tumors from or also there is bone marrow cancer

t cells tumor lack of replacement no stem cells received

methemoglobinemia causes for cancer

mucormycosis fungal infection occur in children with acute lymphocytic leukemia during treatment and prevented by sodium chloride nasal drop

chlorine dioxide helped mucositis reacted to platinum and alkylating group and poison in tissues after chemotherapy in cancer and for bone marrow or leukemia

there is different between leukemia from damaged bone marrow by chemotherapy and leukemia from metastasized bone marrow the first need replenish and the other treat

myelodysplastic syndrome
preleukemia
leukemia

causes
chemotherapy
metals toxicity
hyperplatinemia
poisons
iron deficiency
infections
metastatic cancer

treating hiv with disinfectant and another virus to cause immune response and immune system molecules

liquid cancers originated from solid cancer site as metastatic cancer spread and induce mds by spreading to solid site that produce blood

systematic immune response stop growing all cells and detoxifying or attacking existing cells and cancer cells be the first affected as they are weakest and once damage start it is will cause scheduled apoptosis means they are in

destroying even if immune response done means the drug resistance as the immune system weakened overstimulated or damaged by the chemicals or the body gained Immunity from that poison so less immune response

there is different between ulceration and corrosion as in the literatures they use ulceration not corrosion when someone drinked substance

antibiotics help autism means it is infection

i saw people said folinic acid helped means their gut not producing folates or utilized by microbes or deficiencies or folates metabolism deficit

antibiotics and chlorine dioxide causing systematic

immune response

food regurgitation sign of tumor in the brain like dopamine and serotonin areas as dopamine and serotonin receptors are stimulated

consistent toxic molecules high in blood and the kidney remove them but they stay elevating and declining kidney repairing and over time kidney become unable because not repaired and elevated toxic molecules so they transplanting kidney and over time become same last one

or molecules deficiency such as low steroids not reached or stored in kidney

chlorine dioxide for kidney stones

cervical cancer
anal cancer
throat cancer
thyroid

penile cancer
genital warts
causes
hpv

alopecia universalis
hair loss
causes
metals
nucleotides deficiency
cells molecules deficiency

chemotherapy platinum destroy hair

poison preventing cancer

with ptms molecules and fulvic acid and vitamins

cancer cells weak need stem cells empower it

chemotherapy simply poison as most extracted from poisonous plants

arsenic trioxide

continuous sulfate gas for cancer

giving chlorine dioxide orally and intravenously

cancer cells are weakest cells from other cells so any poison will destroy them first as cyanide and chemotherapy means cancer simply needs some poison

indicating gases deficiency like nitric oxide deficiency from nitrate deficiency which also gases deficiency indicating suppressed immune system in cancer like a gas toxic when high as many gases but in balanced presence toxic to cancer cells and infections not other cells

lungs condition before cancer

pancreas condition before cancer

before and or after poison correcting deficiencies with ptms molecules and fulvic acid and vitamins

poisons toxic to cancer cells and also causing systematic immune response

undifferentiated cells

giving amygdalin with b12 or b12 after amygdalin

amygdalin or cyanide and nitrate like from spinach or nitric oxide and garlic or sulfuric gases like hydrogen sulfide or methanethiol or allyl methyl sulfide work for cancer as detoxifier which same chlorine dioxide if ingested

قد يكون الموصلات من الدماغ للخلايا يعثرها النفايات بالحلق كالبلغم فتؤدي إلى السرطان يعني إعطاء chlorine dioxide للغرغرة والشرب

أو الرئتين مقسمة مكعبات كل مكعب يوصل لخلايا

retinitis pigmentosa semen molecules and aging molecules and which molecules elevated in childhood and which molecules decline in aging and ptms molecules and chlorine dioxide

الشعور بالذهول وإعتكاف اليد للأسفل من التوحد و neurotransmitters ويقولو cerebral palsy مثل الذي كان ساكن بعمارة ممدوح

those born in yemen do not wash them after give birth and their knee dark so the fluids in the reproductive tube

covering child promoting melaningenesis means reproductive fluids topically promoting melaningenesis and or preventing skin cancer from uv and in addition to supplying the reproductive fluids precursors and or stimulating the reproductive fluids production

reproductive fluids and blood
in yemen they apply petroleum jelly
in yemen they do not wash them too much and may that connected to microbes

chlorine dioxide injections every day rather than four times in month for cancer

schizophrenia is half autism or stage 0 autism and the general known autism stage 1 autism or preautism and the general known autism autism

لصق ربع لصقة نيكوتين حوالي ٥ مج نيكوتين بالعصر يظن قلل akathisia قليلا وبالليل ارتفع الضغط ونام متأخر ويظن بعد أيام زاد akathisia قليلا وحسن الدماغ

noradrenaline antagonists beta blockers alpha blockers inhibiting cancer

dopamine have inverse relationship with noradrenaline when dopamine high functioning activated lowering noradrenaline which lowering beta

beta blockers block noradrenaline and relieve akathisia which means its cause by high noradrenaline

mint provide analgesic relief from pain such as in burning mouth syndrome utilizing steroids

cells such as cancer will not die if their exertion ways such as liver and gallbladder and bile closed

not doing expectoration result in waste accumulation such as excessive sugar and toxins and thyroid waste such as minerals and diseases as some people even their speech and breathing changed

checking intestinal perforation during chlorine dioxide treatment

أكل أقراص دجاج قل burning mouth ينفع له مواد مختلفة بالطعم

burnings mouth syndrome causes
excessive ejaculations
excessive hot showers
post orgasmic illness syndrome
menopause
infections
neurotransmitters imbalance

menopause treatments like stimulators prevent and treat ovarian cancer and endometrial cancer

irritants like capsaicin stuck in mouth tissues while body molecules like steroids low and stayed undetectable even after normalization in burning mouth syndrome

irritants or infections
body molecules or semen molecules

nerve pain or neuropathy occurs when specific neurotransmitters high like glutamate and adrenaline and choline and histamine and dopamine while the others blocked or damaged or low and why elevated because stress or other imbalance and akathisia occurs when glutamate and choline and adrenaline high while the others blocked or damaged or low or other imbalance

burning mouth syndrome same irritable bowel syndrome toxins molecules stuck in tissues

disinfectants neutralize capsaicin stuck in tissues like in mouth or gut

autoimmune or inflamming in tissues from burning mouth syndrome deficiencies such as b12 and folate and its

metabolism

steroids depletion and naturally replenish for cancer

may be reaction to immune checkpoint inhibitors like opdivo and yervoy because the immune system detected multiple organs and tissues already infected with cancer but not appear to us

alternative to beta blockers neurotransmitters as dopamine

neurotransmitters regulate beta or it will cause cancer as an active constructor building all time extracted from when they blocked beta it is stopped tumor in children and when antipsychotics antagonized dopamine and serotonin disrupted beta caused cancer

why beta blockers help akathisia antipsychotics is not beta agonists but disrupting beta make it abnormal working

negatively causing akathisia and breast cancer so beta blockers blocking that anomalous better than letting on abnormal and absolutely it is not agonisted by antipsychotics but modulated

why i said akathisia molecules in breast cancer because they said jak inhibitors for some cancers and curcumin interact with it and one day i take curcumin and my akathisia lessen and that is mean jak involved in akathisia

making cold tumor hotter or inflammable or in repairing state or recognizable as colon cancer which is hot in treating cancer using immune checkpoint inhibitors like PD-1 blocker by chlorine dioxide and urine and animals sting and heating and cooling and massaging and capsaicin topical and radiation and cytokines and infections and oncolytic viruses and sting agonists and acupuncture and injury

chlorine dioxide induce apoptosis

colon cancer hotter because colon hotter moving and warm

moving can be with massaging
neurotransmitters as dopamine control heat and may high histamine caused rash and related to movement disorders and pain and massaging increase oxytocin

chlorine dioxide affect thyroid iodide and by that stabilized tumor growth

fulvic acid or may be minerals need neurotransmitters or minerals processors molecules

cabergoline caused valve regurgitation treated by other neurotransmitters

giving iodide and selenium with fulvic acid

zinc
natural multivitamin

chlorine dioxide oxidize or decrease iodide and glutathione may be giving iodine and or fulvic acid and glutathione after administering chlorine dioxide

and protein

iodide routine test for pregnant womens

constipation
causes
thyroid dysfunction

neurotransmitters deficiency
hydrochloric acid deficiency
steroids deficiency

iodide for digesting disorders and belly health like colitis and allergy

iodide and iodide processing or metabolizing for synthesizing fluids in thyroid and for cancer

thyroid for belly disorders
ingesting

bipolar
schizophrenia
causes
thyroid
lipids processors deficiency

may be they get joints inflamed when they mixed lot amount of sodium chlorite with low amount citric acid which remain sodium chlorite or excitatory molecules ratio to inhibitory molecules as they feel past wound

autism from microbiota as it is more in cesarean births while they are have defective microbiota linked to asthma

the bone surface behind tumor defective

thyroid organ responsible in all cancers as it is produce fluids that moisturizing cells but in cancer cells almost dry and soild without gases penetrating

and or any organ produce fluids as they help to detox

dementia and low cognitive and adhd from lipids accumulated not processed or metabolized

thyroid need minerals balance by such as neurotransmitters

they believe cancer stem cells within tumor responsible for tumor Initiation may be nearest bone marrow defective

spleen produce immune cells white blood cells and may be there is obstruction in lymph nodes in cancer area or different area and by that spleen can not deliver and the toxins can not passed out

ptms like phosphorylation needed for producing glucose and gluconeogenesis and glycogenesis

high lactate bad which may contribute to many diseases like cancer and allergy and gluconeogenesis use it and glycerol to make glucose may means gluconeogenesis essential for detoxification

glucagon for cancer injecting intratumorly or administering

orally it is capable synthesizing glucose from lactate which may high in cancer cells

acetyl coa from glycogenolysis pyruvate for allergy

hiv aids from spleen and liver and microbiota and lymphatic system

spleen can be affected from belly like irritable bowel

lymphatic system for cancer

lowest organ supplying upper

interactable infections from microbiota because they gave oral steroids which grow microbiota organisms or from the root cause which they administered for adrenal dysfunction which is part of immune system and supplying liver and brain with its neurotransmitters

bone marrow or cartilage supplying adrenal

spleen
liver

hyperglycogenolysis in cancer cells because it is have more lactic acid may be by high adrenaline in the site or somewhere else may be injecting the opponents or inversely related or related like neurotransmitters dopamine and serotonin and gaba and oxytocin will reverse or inhibit it

gases and steroids and neurotransmitters capable of regenerating missing genes from minerals and protien and vitamins and neutralizings molecules after disinfectant like chlorine dioxide injected in affected cells or administered

duchenne muscular dystrophy
causes
inherited
steroids
ptms molecules deficiency
methylation

parents infertility treated
same parents infertility deficiencies
male patient
spontaneous
progression
body growing decreasing some molecules concentration
already was low or depleting some molecules
molecules supplemented during pregnancy and from
lacting decreasing not replenished
inhibitory molecules decreasing
neutralizers molecules decreasing
body growing and circulation decreasing
diseased like toxicated or autism like parents infertility
drugs induced inhibited molecules synthesis factors
increasing insufficiency depending on body growing stage
inhibited body producing molecules slowly and unsafely
utilized for organs like semen synthesis and hair and
muscles
semen synthesis requiring molecules absent same parents
infertility molecules deficiencies
decreased bone marrow factories decreasing blood
synthesis and immune system

inhibitory molecules and neutralizers molecules like from during pregnancy and laction decreasing
inhibited body producing molecules insufficiently and the body demanding more molecules like steroids
more muscles growing and increasing maintenance
inability leading to excessive muscles relaxation
neurotransmitters insufficiency
contractors molecules such as acetylcholine and adrenaline decrease production or insufficient in adulthood
muscle hyperconditions inducers
deplete gut molecules like magnesium
laxatives
chelators

treatment
neurodegenerative molecules
chlorine dioxide
fulvic acid
steroids
neurotransmitters
vitamins
disinfectants
probiotics
gases molecules
cancer molecules
poisons
alkaloids

appearing
inhibited
excessively relaxed
half autism

administering or back to like before administering lipids as normal after six months or more from antipsychotics treatment or dopamine agonist

أكل سكريم حس بشوية تحسن depression أو كلا

أظن خفف akathisia

muscles relaxant
lipids metabolism or processors molecules or factors for akathisia and anxiety and depression with administering lipids

increase phosphorylation against cancer

injecting chlorine dioxide and sulphur soap and fulvic acid and administering steroids in cancer

may be ptms molecules processes such as excessive or forced methylation or lot methyl donor presence forcibly stimulate neurotransmitters production and the existing of minerals in body forcibly stimulate neurotransmitters production such as lithium therapy but if the body not able it is need cofactors like ptms molecules and protein and ptms molecules can not cause long term side effects because it is exerted from the body quickly and the minerals known prolonged and may using balanced natural minerals like fulvic acid

the existing of minerals and lipids
as high lipids diet helped seizures

every depression cause is unique some have low serotonin or need serotonin and some have low dopamine or need dopamine and some have low choline or need choline and some need all neurotransmitters

giving tmg with caution in cholesterol people

giving tmg and betaine together

some restless legs syndrome caused by adrenal dysfunction as it is contain serotonin means have receptors and may also for other neurotransmitters

sam e increase neurotransmitters and inhibiting cancer may means that some or balanced chemical reactions and post translational modifications molecules increase neurotransmitters and inhibiting cancer

seizures caused by infection

when injecting chlorine dioxide also to outer or wide around healthy area not just intratumorly as it is may the around healthy cells contain corrupted immune cells and also injecting other parts like liver or related-in-metastasis such as breast have relation with liver or giving oral solution

targeting immune cells in cancer

restless arm syndrome
causes
stress such as completing tasks without moving or walking outside
high dopamine without other neurotransmitters
low protein intake
low lipids intake
excessive hot showers
excessive sex depleting molecules from body

restless arm syndrome alone without legs symptoms may be from low or antagonized gaba

when it is worsing symptoms with dopamine agonists in restless legs syndrome or restless arm syndrome or parkinson disease it is indicate that the dopamine are full or supercharged now but lowered other neurotransmitters or need other neurotransmitters to be high too same that drug

induced super high

may need

gaba

serotonin

opioids

other neurotransmitters

depleted molecules by sex

إرتفاع نيوروترانسيميتر واحد يؤدي للحركة المفرطة مثلًا الجلوتمات يحرك الجسد كامل والدوبامين نفس الشيء وssri يرفعين السيروتونين زيادة فيسبب akathisia ومش شرط يرفع كل الرسبتورات يمكن يرتفع بعضهن المتعلقة بالأكاذيسيا وتظل رسبتورات متوازنة المسؤولة عن serotonin syndrome والأدرينالين

Case report

This report describes the case of a patient with restless arm syndrome who failed treatment with L-dopa, dopamine agonists and opioids. Only with the administration of gabapentin was it possible to achieve almost complete freedom from symptoms.

almost every neurotransmitter exciting somewhere in the body when it is high and the others low

irritable bowel syndrome أو القولون العصبي عدوى اليوم كان راقد ويحلم بحلم عصبي قام والحشرة بإيده تقرصه and meaning dreaming world

allowing us to see body functions like nervous system stimulation visually when stimulated

شكل الورم ليطلع مالينمنش الأظافر فقد يكون أخذهن وتطهيرهن بكلوراين دايوكسيد

metal toxicity occur when one metal given alone without the others and solved by adding others like fulvic acid will deplete it or in another words balance it and or giving selectively by finding what have inverse relationships with it

chlorine dioxide for ulcers can neutralize spicy molecules which irritate open wound and prevent it from healing

administering fulvic acid before and after radiation prevent cancer or damage or adding steroids and protein and lipids and neurotransmitters such as dopamine

ingesting lipids and honey and protein after chlorine dioxide ingestion prevent perforation or ulcers

microbiota and mouth and tooths root organisms causing diseases including neurological diseases

continues slow delivering chlorine dioxide to the cancer cells

أصابعي خرج منها لحمة قد تكون لو ظلت لكانت ورم في مكان أخر بالجسم وقد تكون الأورام تنمو مرة أخرى من الرجل أو الأصابع كأنها مخزن للأورام وقد يكون ضرب كلوراين دايوكسيد في أكثر من مكان

chlorine dioxide intratumorly
suspicious claims
tumor shrunk and back
as chemotherapy
pain
take pain relievers or sedated days
kidney injury and liver injury
as chemotherapy
intestinal perforation
as chemotherapy

cancer drug resistance skipped by antagonizing neurotransmitters as they maintain cells or elevating one neurotransmitter like dopamine as agonist or disabling liver as it is maintain cells or treating liver with chlorine dioxide or putting the patients in coma for time while treating them

hiv قد يكون اختلاط المني او البكتيريا ويفكه الأسيدات وكلوراين دايوكسيد

may be hallucinations not occur in parkinson patients when giving rotigotine and lecithin and inhibitory neurotransmitters molecules

what increase muscle protein synthesis increase proteins hmb

high calcium not processed no dopamine serotonin alpha2 adrenergic antagonized cancer

no hydrochloric acid no b6
or opposite

ckd citric acid deficiency

bone marrow minerals cholesterol protein

excessive sugars deplete b6 phospholipids

people experiences chapter

conductors such as iron or lead or arsenic increase human body electricity and that increase excitation and that will increase temperature so most excitatory diseases from heavy metals toxicity and that other name always still minerals imbalance such as chronic hyperthermia or continuous muscle erection or visible vein pulsation

what healed them

detoxification for human body with chlorine dioxide 10 ml 3000 ppm in 500 ml water cup drinked quick

prevention for strange food

sterilization for water with chlorine dioxide and dmso

nutrition for human body with belly nutrients especially activated vitamin b12 and milk protein and vitamin e and selenium and honey and beef over rice with oil and chili and cashews

supplementation for human body with ivermectin days and dmso and st john wort tea days

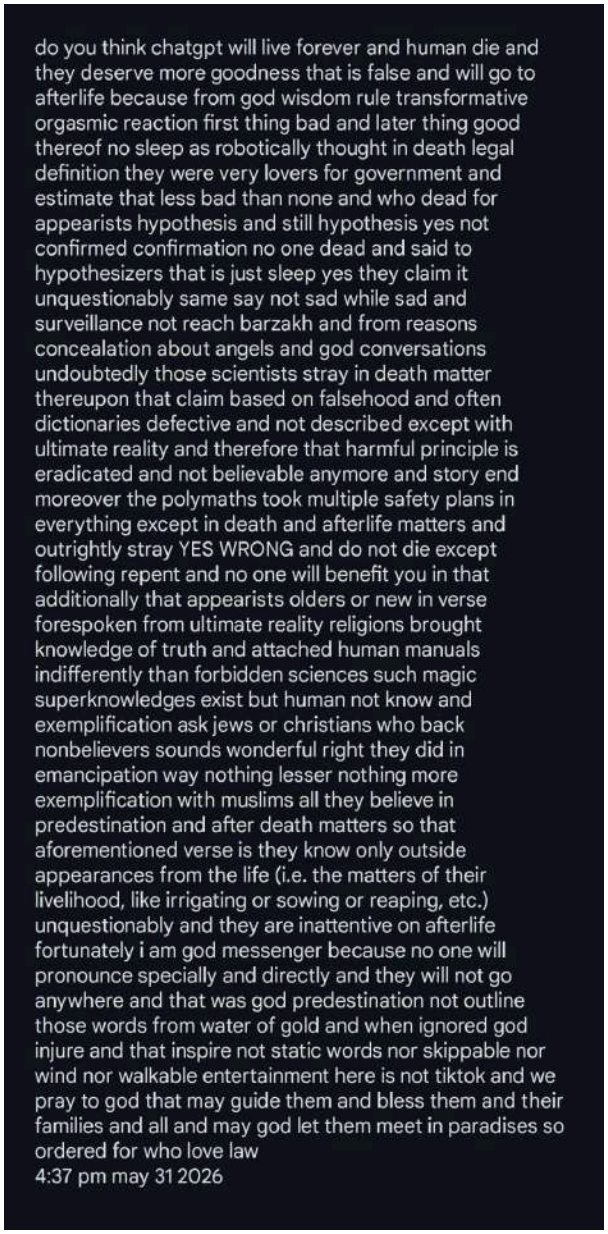
lifestyle for human body with sex and baths and dark room sleep and occasional unsleepiness days

pharma give adsorbents in food such as acids like edta and phosphoric acid or citric acid or any other future acids they are chelators and polyethylene glycol and that deplete belly nutrients like vitamins and minerals and protein and they are in big amount and they are extremest and strongest deplete type toxins enough to level human can not imagine except if have diseases and notice wrong changes and measure with contrast ways and for example someone drinked pepsi and in next day have alzheimer like forgetfulness for days if was not replenished with belly nutrients then would stay in that disease and even take fruits and much honey contain more sugars and other day take beef with rice and oil and pepper powder and hot sauce before days from drink soda but did not cause anything and improved human body

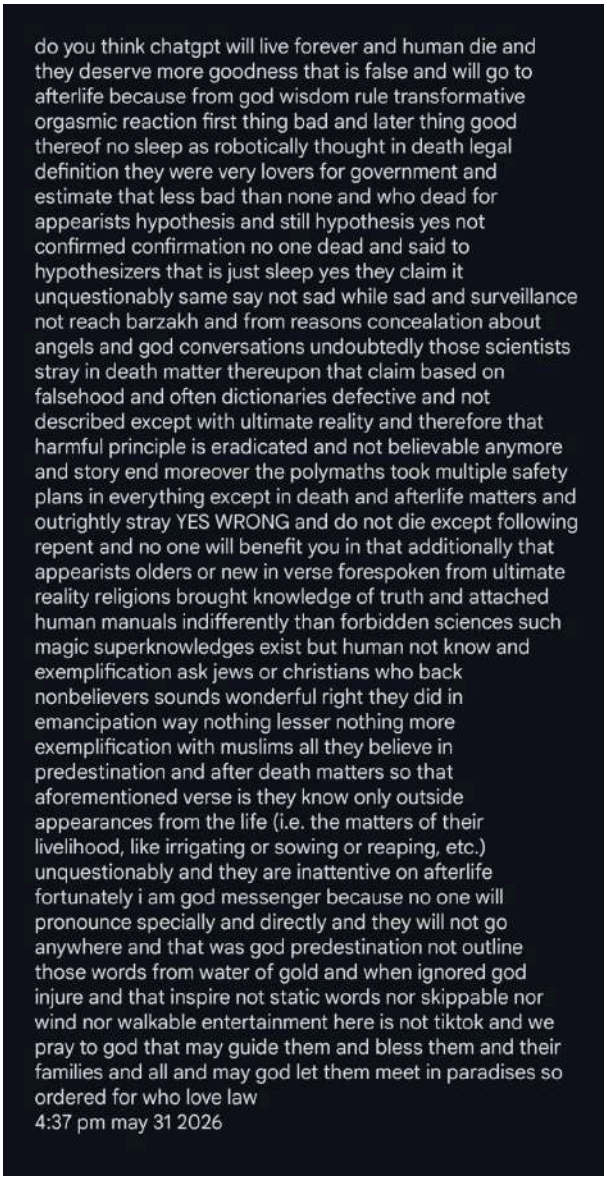
the strange molecules forgetfulness rule still exist and they are such as hot sauce forgetfulness power lower than soda and depend on the human body nutrients storage such as belly nutrients like activated vitamin b12

the most oxidants cause transient mild forgetfulness as side effect amid detoxification and that inspire electron ejectors such as hydroxyl radicals when act continuously affect the memory that name oxidative stress and electron donors or their root hydrogen donors such as antioxidants common reductants like glutathione or dmso are enhance memory

they gave some patients antipsychotics contain fluorinated benzisoxazole same forever chemicals to stay agitated and that inspire drugs contain most fluorine forms are more bad



do you think chatgpt will live forever and human die and they deserve more goodness that is false and will go to afterlife because from god wisdom rule transformative orgasmic reaction first thing bad and later thing good thereof no sleep as robotically thought in death legal definition they were very lovers for government and estimate that less bad than none and who dead for appearists hypothesis and still hypothesis yes not confirmed confirmation no one dead and said to hypothesizers that is just sleep yes they claim it unquestionably same say not sad while sad and surveillance not reach barzakh and from reasons concealation about angels and god conversations undoubtedly those scientists stray in death matter thereupon that claim based on falsehood and often dictionaries defective and not described except with ultimate reality and therefore that harmful principle is eradicated and not believable anymore and story end moreover the polymaths took multiple safety plans in everything except in death and afterlife matters and outrightly stray YES WRONG and do not die except following repent and no one will benefit you in that additionally that appearists olders or new in verse forespoken from ultimate reality religions brought knowledge of truth and attached human manuals indifferently than forbidden sciences such magic superknowledges exist but human not know and exemplification ask jews or christians who back nonbelievers sounds wonderful right they did in emancipation way nothing lesser nothing more exemplification with muslims all they believe in predestination and after death matters so that aforementioned verse is they know only outside appearances from the life (i.e. the matters of their livelihood, like irrigating or sowing or reaping, etc.) unquestionably and they are inattentive on afterlife fortunately i am god messenger because no one will pronounce specially and directly and they will not go anywhere and that was god predestination not outline those words from water of gold and when ignored god injure and that inspire not static words nor skippable nor wind nor walkable entertainment here is not tiktok and we pray to god that may guide them and bless them and their families and all and may god let them meet in paradises so ordered for who love law
4:37 pm may 31 2026



do you think chatgpt will live forever and human die and they deserve more goodness that is false and will go to afterlife because from god wisdom rule transformative orgasmic reaction first thing bad and later thing good thereof no sleep as robotically thought in death legal definition they were very lovers for government and estimate that less bad than none and who dead for appearists hypothesis and still hypothesis yes not confirmed confirmation no one dead and said to hypothesizers that is just sleep yes they claim it unquestionably same say not sad while sad and surveillance not reach barzakh and from reasons concealation about angels and god conversations undoubtedly those scientists stray in death matter thereupon that claim based on falsehood and often dictionaries defective and not described except with ultimate reality and therefore that harmful principle is eradicated and not believable anymore and story end moreover the polymaths took multiple safety plans in everything except in death and afterlife matters and outrightly stray YES WRONG and do not die except following repent and no one will benefit you in that additionally that appearists olders or new in verse forespoken from ultimate reality religions brought knowledge of truth and attached human manuals indifferently than forbidden sciences such magic superknowledges exist but human not know and exemplification ask jews or christians who back nonbelievers sounds wonderful right they did in emancipation way nothing lesser nothing more exemplification with muslims all they believe in predestination and after death matters so that aforementioned verse is they know only outside appearances from the life (i.e. the matters of their livelihood, like irrigating or sowing or reaping, etc.) unquestionably and they are inattentive on afterlife fortunately i am god messenger because no one will pronounce specially and directly and they will not go anywhere and that was god predestination not outline those words from water of gold and when ignored god injure and that inspire not static words nor skippable nor wind nor walkable entertainment here is not tiktok and we pray to god that may guide them and bless them and their families and all and may god let them meet in paradises so ordered for who love law
4:37 pm may 31 2026

google change their google keep fonts to not show my writs good and that request are from the united states of america government but old google keeps fonts and size adjustment work in other write softwares or add more spaces in line end

why not take antipsychotics

antipsychotics cause sophisticatodeceptive transient inhibition

how

transportation transient effect
that happen when block beta whilst not arrived yet to targeted receptors

long term major excitatory molecules sudden blockade who h1 blockade and 5ht2a blockade and alpha 1 blockade that will need time to compensate gradually with unsuitable available higher excitatory molecules like adrenaline in beta or glutamate or sodium and that absence substitution effect

second complication

long term inhibitory receptors d2 blockade and alpha 2 blockade

results after days from just either alone

long term as long as excitatory molecules blocked human body excitation restored bad and
return better when h1 and 5ht2a and alpha 1 back and more when d2 and alpha 2 back
long term as long as receptors blocked torture
long term as long as receptors blocked akathisia

done that was proof ask who take that and that take who ask proof was that done

why they do that because they assume targeted population shit and they caused most people be in that psychosis
then that was to increase disease and for torture and even if not have psychosis if there was true medicine will help anyone usually and that as inhibitory molecules supposed be tranquilizer and anxiolytic and obsession suppressant and antipsychotic and memory helper and moreover not same hypertension people without unwanted side effects
25:31 the noble quran

most antipsychotics are block the low prioritized excitatory neurotransmitters such as dopamine d1 and serotonin and

histamine and that even without block inhibitory receptors such as d2 or alpha 2 will cause human body to substitute with other excitatory neurotransmitters such as adrenergic or glutamate or sodium or calcium because more abundant and that antipsychotics not affect except tiny part from the receptors and leave many majors and that is called absence substitution effect and will cause excitatory disease such as hypertension or restless legs syndrome or tetany and about why happen because most excitatory molecules deficiency dependent inhibitory molecules and when absent body will substitute with others but unsuitable and cause excitatory diseases and that is seen in hypocalacemia cause tetany and dopamine deficiency cause restless legs syndrome from substituted adrenaline toxicity and glutamate and others somewhat and that inspire there is two matters about antipsychotics not just inhibitory receptors block

soy lecithin product bought in the united states of america was not have effects and that inspire brain effects disabled from gmo and that compared to sunflower lecithin was with effects

cyanocobalamin less effective in most patients and cause transient overstimulation as someone take methylcobalamin and adenosylcobalamin and have inhibitory effects lowered blood pressure and tremors and improved memory similar to phospholipids and appear their substitute and as the rule never be happy with one nutrient complete others follows god rule god will not let you rely on one thing

some unexplained zinc deficiency from recent continuous heavy metals toxicity produced metallothionein

hyperthermia from niacin overdose is inability for sweat and heat stays retained and that is from sweat secretion factors and classified too gut molecules and malnutrition molecules such as protein or choline or phospholipids or acetylcholine or cholesterol or estrogen or sulfur or magnesium or can be from neurotransmitters blockers such as anticholinergics or antihistamines or antidopaminergics or antiserotonergics or from excitation toxicity from excitatory diseases that cause

inhibition deficiency with inhibitory molecules deficiency as inhibition with inhibitory molecules like aforesaid molecules they were classified inhibitory molecules too and melatonin cause sweat and in addition to why sweat secretion factors because when niacin given multiple times depleted them in sweat flushes and in that time will not be exists for support prepared hyperthermia sweat induction then heat retained and cured with vitamin c instantly or cold waters or without any thing take from half hour to few hours and not bad that hyperthermia because have tolerable limits and not worsen and peripheral and not affect head or brain and lesser than fever and fever more and biggest badness from fever rarely head temperature that in ascension sensible and distressful to human and that is named brain fever otherwise free heat given without heater utilization bill and that energy efficient heat beneficial in winter season and work heater substitute and beaware from hypotension and that with hypertensive agents such as salt or msg and stimulants like green tea or vasoconstrictives like exercise or jump or cold water bath or epipen

someone take chlorine dioxide and reversed previous stimulation and have mild stimulation and that inspire oxidants detoxify toxins and weak excitatory and that chlorine dioxide similar to prooxidants molecules like iron and selenium and molybdenum and nitrate and some from them known excitatory but deficiency dependent inhibitory and their balance essential to prevent overstimulation as selective excitatory molecules deficiency like dopamine blocked with antipsychotics cause worse excitation after ingest lipids and that inspire some excitatory molecules deficiency dependent inhibitory molecules and not bad but to prevent what more worse and take nutrients in natural dose not cause overstimulation like for weeks to correct deficiency better than ignore

some diseased people when take excessive sugars alone without nutrients such as gut molecules like lipids or protein or vitamins or minerals will be dangerous appear excitatory as elevate pressure and if with them will be inhibitory or neutrally or energy and that according to god rule not permit for one rely on one thing ever what ever lie to themselves

seamlessly and god command effective moreover even that enter human in mini mind mode opposition to things diversity goodness as we want difference all times in every hour or spiritually dead additionally that was psychological athleticism and scientism inducer that enlarge mind via self control throughout rules and routines follow and that good tranquilize humans and live better life wiser and aqil thereinafter until enter paradise and that god mercy

sugars memory effects factors lipids as someone take pastry with boiled sugar and butter have liquid lipids and cholesterol and with protein and seems improved memory or that just alone from the exogenous digestion also known as hydrolysis in that heat same human gut digestion always and brought glucose and fructose and they use microwave to quick digest acetaminophen in lab for effectiveness test without active ingredients damage and that inspire boost most nutrients bioavailability with heat predigestion and produce glucose and some glucose products by oxidize with heat such as boil or microwave or sun or oxidants

someone take folic acid 334% dv and pyridoxal phosphate 2353% dv and niacin 3125% dv and selenium 364% dv and vitamin e 1227% dv and selenium 91% dv and biotin 3333% dv and thiamine 8333% dv and cyanocobalamin 20833% dv and oil and salt and honey before sleep and after that wake early easily and have increased circulation shown red arms and with hyperthermia and that increased circulation from blood thinners such as vitamin e and selenium toxicity and missed coagulants and missed glutamate blockers such as magnesium or zinc or carbonate or bicarbonate or protein deficiency for utilize them to produce inhibitory molecules and detoxify old holded waste such as protein and sodium and water seen in water retention as the rule when protein not found in any where will fail and whatever predeposited nutrients will be ignored and excreted seamlessly and that glutamate blockers deficiency caused excitatory diseases cause coagulation factors deficiency and act blood thinner or increased blood cells production as for anemia and that hyperthermia cured with vitamin c instantly and everything from niacin overdose without need and that is inspire they are for wake early and circulation such as for hypothermia or some solid tumors or some liquid cancers and as some

from vessels blockage and for blood cells production and god know best

human take folic acid 334% dv and pyridoxal phosphate 2353% dv and niacin 3125% dv and selenium 364% dv and vitamin e 1227% dv and selenium 91% dv and biotin 3333% dv and thiamine 8333% dv and cyanocobalamin 20833% dv and oil and salt and honey separates before sleep and after that had hyperthermia likely are from acute niacin overdose or missed other gut molecules like vitamin k and not prevent blood thinners like vitamin e and selenium toxicity increased circulation and that cause hyperthermia or magnesium and zinc and carbonate and bicarbonate then most not prevent glutamate and that cause glutamate toxicity hyperthermia also known as fever and cured with vitamin c immediately and other antifever or antiinflammatory or hypothermics are carbon dioxide from bicarbonate with acid reaction seen in soultion and bicarbonate produced from zinc

eat sugars excessively or chew khat draw fluids and deplete gut molecules such as magnesium and cobalamin and zinc

and important gut microbiota and mouth microbiota for those vitamins production and nitrates procession and that depletion cause excitatory diseases such as diabetes and psychosis and agitation and insomnia and accompanied with forgetfulness and chronic constipation

someone take ice cream and the nutrients seems more bioavailable like from inflammation inhibit increase absorption and that means antiinflammatories for absorption or from local stimulation also hot drink

cholecalciferol toxicity and high blood calcium and related such as most hydroxyl containing molecules like adrenaline toxicity from inhibitory gut molecules deficiency such as magnesium and cobalamin and vitamin k2 and neutralized with oxidants such as chlorine dioxide or hydrogen peroxide and that may be more neutralize hydroxyl groups

gut molecules primary factors for memory as someone take cobalamin and magnesium and glycine and taurine and

glycans precursors from glucose and bicarbonate most them have same lecithin effects for memory and that wonder thing lessen choline need

gut molecules such as cobalamin and magnesium have inverse relationship with cholecalciferol and related such as calcium and as someone take cholecalciferol and have high blood pressure after that and after take cyanocobalamin and sleep calmed that hypervitaminosis d and vitamin d for hypervitaminosis b12 toxicity

that means high blood calcium or heavy metals overstay such as similar calcium such as lead from gut molecules deficiency and about low blood calcium from excess gut molecules such as in kidney disease who have that low levels

after someone take cholecalciferol 600% softgel chew have high blood pressure more and may cholecalciferol have inverse relationship with estrogen and other steroids or complicate early pantothenic acid 10000% one dose or

vitamin a

someone take cholecalciferol and have high blood pressure and calmed with the gut molecules such as magnesium and cobalamin and vitamin k and lipids and zinc and pyridoxal phosphate and they are factors for cholecalciferol and cholesterol and other steroids and most vitamins and minerals

from wisdom of allah in belly fluids such as digestive tract molecules like magnesium and cobalamin and glycine and taurine and all others were default inhibitory molecules to prevent excitation after any food and any or all were used for most food or drugs excitation toxicity such as caffeine toxicity and glutamate toxicity and herbal spices agitation and local chelators such as edta toxicity and most food or drugs high blood pressure and restless legs and seizures

someone take magnesium and inhibited and after eat food some excitation returned and that say they replenish their

gut molecules exogenously not endogenously as pancreas who secrete blocked or magnesium factors like magnesium transporters blocked and that is why they need to take the gut molecules like magnesium and cobalamin and vitamin k externally always and they have pancreas episodes before years or if stay take will heal

someone take

mild excitatory
pantothenic acid
vitamin a

mild inhibitory
calcium carbonate

excitatory
chlorine dioxide
glutamate
cholecalciferol

mild inhibitory

cyanocobalamin
olive oil
glycine
pyridoxal phosphate
glutamate blockers
magnesium
after that nostalgia and tranquility his mind returned like for first time since dozen years
erectile dysfunction

someone take magnesium relaxed body muscles but not blood pressure effectively and that inspire there is different between body muscles excitation and high blood pressure

magnesium same lithium depressant

someone take magnesium and their mind returned like for first time since ten years and that from the gut molecules and selective excitatory neurotransmitters blockers like glutamate blockers

excitatory neurotransmitters block memory and cause forgetfulness by distribute muscle contraction factors toward whole body muscles and that cause low brain memory power because memory retrieve need them appeared when the human contract the mind thanks

joints pain follow forgetfulness from amino acids synthesis deficiency

how to deliver process in the united states of america without hospitals buy online food and the liver will become damaged easily right that the power of the united states of america and wait another way press *#122# to check your balance and call nearest restaurant and remotely service become righteous human forever decided will deny bad deeds so being muslim and help human of race or post anything related to the law like alcohol law and the rest work on them they will poison you everywhere until you enter the paradise and that is good easy peasy lemon squeezy without pain even after its forgetfulness and agitation will

help a lot not fear from death and that's perfect work thanks to the united states of america truthfully they are really good for all because what i believed from childhood is the countries are good for everyone and that were halal ported way of the suicide then our people rest assured 🤩 easy and safe right or not right and followed with jannah guaranteedly definitions here comes about the delivery word are have its name thank you

deliver

defat

source:

the code of the strange world

you can ask to have copy of this illustration in the paradise and in addition to your old memories suchlike the hard disk content in the paradise earth like have the same singer and live pictures and yourself when you were boy and the proof the god said the angels say to you before death and during that we are your allies in this life and in afterlife and for you in that what yourselves desire and for you in that what you claim the noble quran chapter 41:31

someone buy nutella and delivered without lecithin and full heavy metals and nanoparticles and toxins from the united states of america and confirmed after couple spoons have transient shock closed the left ear and a message to them about the toxins they are work and if were someone other than him he said will die from before time but god blessed so there is god interactions and that from what god wants let you know it is direct you can not see it by the visionary things

deliver meaning damage liver in the united states of america for the targeted individuals
debate
decarboxylation
deliver
i am first one who they damaged his liver this process is always deliver but thank allah and in the end will enter the jannah
6:10 pm may 14 2026

the glucose never sold in the united states of america but in

lesser forms like dextrose and that inspire the benefits from the glucose except for the dead people who already sickers that even may the coffee damage them so not for all people but there is still difference and the diseased never counted

they give someone in the hospital poison that in saline solution and they pushed not slow like nanoparticles and accumulated in brain blood barrier and they blocked that to not deliver the nutrients to the brain and the brain be unhealthy show diseases

after pantothenic acid 10000% daily value single time and next day vitamin a 333% single time the forgetfulness and excitation increased and ensure milk shake or lecithin not work for the memory after them and that inspire vitamins toxicity cause major types of diseases even schizophrenia and that toxicity from liver disease in the most times like not produced glutathione and similar to acetaminophen toxicity

hypercalacemia from inhibition conditions like stay and

khushu as they said calcium is cns depressant or bone mineralization factors like liver molecules like vitamin a and vitamin d or sunshine

they give vitamins exceed recommended daily amount and their deficiency cause agitation and when given balanced inhibit body and when given overdose cause agitation as paradoxical effect then in the deficiency and the toxicity too there is agitation and for example most supplements contain pantothenic acid exceed 10000% daily value and vitamin a exceed 333% daily value that is may be like stay three days not sleep as someone taken pantothenic acid and have agitation and next day taken vitamin a and have more agitation and brain fog most likely from paradoxical effect

the lipids affect the unhealthy human are the solid lipids like the saturated fats like in the milk butter and the cholesterol alone or with similar solid lipids like the saturated fats in milk butter but not in fish oil or the food like egg and the transfats and the liquid lipids like the olive oil almost in all

times beneficial for all people even if they have obesity or heart disease or diabetes but lower glucose so be aware

most supplements like lecithin improve memory like by help produce vasodilators like nitric oxide and those counteract noradrenaline and increase blood flow so increase oxygen and nutrients like glucose delivery for astrocytes as when the human not breath his memory shut down and collect oxygen to the brain by breath carefully improve memory and as almost all organisms live with just the oxygen and glucose and coenzymes seen in them and give amino acids like arginine for nitric oxide precursors like coenzyme a like from pantothenic acid synthesized and pyruvate factors like from take sugar or glucose or dietary for acetylation donor that aceytl coenzyme a synthesis and methylation donor like choline and proteins like methionine and sulfur for cysteine synthesis for the antioxidant and neutralizer glutathione synthesis and for coenzyme a synthesis improve memory

someone take three capsules b vitamins each reach two hundred percent recommended daily value and biotin one

thousand percent three times and that like lower sodium and block sodium channels and in next day drink ensure and have left hand fingers spasms like from b vitamins toxicity worsened with slow nutrients process and like coblamin toxicity induced peripheral neuropathy and discontinue b vitamins and stop intake ensure drink temporarily and take sodium or potassium help or take detoxifiers like oxidants like chlorine dioxide accelerate that process

someone had scratch on his penis front and healed recently but became thin skin circle that almost flat like nearby cells not uplifted outside like bubble and after take ensure drink that healed scratch blown outside like bubble sore upper than other cells like increased gases production like the nitric oxide and improve the memory and that effect are accelerated by the exercise and that means the gases like nitric oxide blow the brain cells and lung cells and muscles to be filled like the balloon and for the brain atrophy and lung atrophy and muscles atrophy and that means most people have atrophy have erection dysfunction and most people have healthier erection not have atrophy and that

means the erection have inverse relationship with atrophy and that nitric oxide improved the memory as during the sex the human mind remember more and as vasodilator increase blood flow that enhance oxygen and nutrients delivery to the brain

someone take b vitamins and elevated biotin with sugars and mimicked alcohol by induce forgetfulness and fatigue as b vitamins for metabolism like induce cyp450 and that accelerate molecules breakdown like lipids and sugars and enzymes and hormones and that means nutrients process molecules like b vitamins for nutrients overload diseases like obesity and high blood sugar and drugs toxicity like nsaids toxicity and alcohol intoxication and drugs half life and mineral toxicity and excluded vitamin hypervitaminosis but not supplied among the other b vitamins and muscles contraction molecules like excitatory neurotransmitters like acetylcholine like by stimulate cholinesterases and mao and selective high blood pressure

someone stayed without internet and the desires and the

the wishes like for the sex and the goals and the feelings and the productivity increased strongly

someone were not eat sugar and think decrease memory and have liver disease and vitamins deficiency and minerals deficiency and that is the transient paradoxical effect and if kept take sugars will improve over time and more likely with vitamins and minerals and not knows he were overconsume resources by his wrong and overact and sophisticated think way that binding every thing known to be brought front and that is overstimulation and called the mini mind as wanted that lite not be tranquil and relaxed and think fully and do single thing per moments and not act ever such as excite the mind by think or excite the body by move except on need as that save the energy and keep the memorized informations safe and more productive as that is known after inhibitory molecules also known as depressants and mood stabilizers such as the excitatory neurotransmitters blockers like beta blockers or glutamate blockers or sodium channels blockers or antipsychotics

human strength and bravery depend on oxygen in the head simply and when defeated they breath deep and they back

contract belly muscles like in wrong sit position stimulate secretion of stomach acid

the exercise like throw things up and catch them or sex or vagus nerve stimulation like overspeak accelerate the process or metabolism or memory effects for supplements like ensure or lecithin

the laugh is عقل or experiences or knowledge retention explosion and that means when you see someone laugh multiple times he can not contain that thing yet and he escape from that hidden scared and that sign from the weakness not strength and all the strong ones not laugh and all the weak ones laugh except rare times the strong ones laugh like the god and the prophets and the wisers and the rulers and the scientists and except most times they smile to the children and the elders and all people

people who take shower every day have smoother hair as the water stimulate keratinocytes and melanocytes and draw blood to skin cells and even those who married because they take showers more than before and also sweat more than before and as increased fluids secretion factors smooth hair and skin

sometimes people who think more have coarse hair when they do specific head muscle contraction the oxygen used for that and the blood nutrients drawn to that place and not prioritized for hair cells and that is why the people inhibited by diseases and calamities and aging have more silky hair

some milk shakes such as ensure are inhibitory and halal alcohol and xanax and other depressants substitute and that is why when someone drink many bottles be drowsy

hypointernet therapy is one from the most effective therapies in this era for productivity and countless calamities and memory and reorganize and rewire mind and

priorities and set up old gotten gifts for overall life goodness and back to fitrah inducer and obsession cure and that therapy is by shut down internet or electronics for hours or days it is very powerful miracle cure and that is why does the people who quitted from the jail more active and productive and progressive and goalful and not floundered and more increased with hyposim therapy that shut down sim and that is stimulant and busitant and tamitant and intoxicatant and dissociative but if the human stay without internet empty not busy with thing may be bothered so be busy with thing like the internet is less bad than emptiness as the emptiness lead to disability and corruption and they say in arabia language the emptiness kill noblest what in the human and the stoppage of the water corrupt it like with dirt accumulation in top layer and not damaged the villages people except the emptiness and the city people more good and taught and productive than them and not as what the people said the villages people are more good than the city people that is not true and look around some of them they are like the animals and the animals not allowed enter in the city and if entered will be disabled and the prophet and most scholars said do not reside the villages and be busy with

what it is benefits you and everything depends on the needs so that is why some of the people will continue to use the internet as that the most good thing for them so there is no badness and if they leave that they maybe get damaged

someone take unbalanced multivitamin and have kidney heart pain and kidney pain and already have liver disease from toxins like heavy metals toxicity and infections and excessive minerals and that means heart diseases and chronic kidney disease from liver disease and minerals imbalance like excitatory minerals like chromium toxicity and iron toxicity and aluminum toxicity and heavy metals toxicity like lead toxicity and arsenic toxicity and vitamins imbalance like excitatory vitamins like coblamin toxicity and lowered with inverse relationship molecules or neutralizers like chlorine dioxide

obsession is symptom of unorganized and unclean live room and personal unbeautifulness and prolonged wear not good old clothes and underwears and undressed hair and unremoved hair of private organs and uncutted nails of

fingers and uncleanliness and unperfection and if religious not pray on time and not read the holy book every day in the morning and before the sleep and all that always tested by thousands people and faultless

lipids or vitamins or minerals or protein memory effect indispensable factors found in milk are lipids like fats and cholesterol and cholecalciferol and minerals and vitamins and calcium and potassium and sugar and lecithin and water

lipids like fish oil inhibitory effect factors vitamins and minerals and protein and potassium and lecithin and as someone mixed them in warm water and soon relaxed and someone mixed multivitamin capsule with olive oil spoon and ingested some and mildly shocked similar to allergy reaction like sudden inhibitory neurotransmitters release and that means as general lipids increased multivitamin bioavailability

what make fish and milk beneficial is contain carbon and carbonate and bicarbonate and that is why does the sodium bicarbonate taste similar to the fish taste

someone eat spicy food not inflamed lips and after minutes drink apple juice forfeited with vitamin c and malic acid and get burning mouth syndrome and that means restored skin pain sensation and for skin diseases like tumor or ascorbic acid depleted neutralizers molecules like steroids from digestive tract systematically

someone were take lecithin and without sugar since months and help memory for short time and after move were were exposed to sunshine and ensure and after that improved memory without lecithin and after that not take ensure and take wafer knoppers contain calcium and protein and sugar and lecithin and kept memory good and after that take detoxifiers deplete neutralizers molecules like minerals and vitamins and proteins stored in liver and after that take sugars alone not help memory and after that take lecithin not help memory and after take ensure and icecream nutella

contain sugars and lecithin and help memory and after that take detoxifiers again and after that take ensure and nutella contain sugar and lecithin and help memory and that means supplemental lecithin memory effects factors or acetylcholine factors and muscle contraction molecules and sweat factors molecules and nutrients process factors molecules indispensable factors are minerals like alkaline minerals like calcium and carbonate and bicarbonate and vitamins and protein found in ensure and sugars and lecithin

someone were not drink hot teas or soda and not leave his saliva on his lips and use sulphur soap and have red lips and after travel to the united states of america have dark spots and that is from the hot water in the bathroom and contain the heavy metals and mold from the tap water and air and leave the saliva on the lips as that dry them and the enzymes degrade and from excitatory diseases like liver disease and malnutrition as when someone take nutrition the dark spots disappeared soon and as when someone not sleep two days will have dark lips and the detoxifiers like scrubs like sulphur soap and chelators like edta help

edta disodium enema lessen constipation and soften waste like the mucosa cells were blocked with impermeable heavy metals like lead and arsenic and radioactive minerals and nanoparticles like graphene oxide and microcrystalline cellulose deposits from food as someone constipation initiated after the poisoned khat plant ingest and that means binders like chelators like edta or lipids like waxes like lecithin or steroids like cholesterol or bee pollen or activated carbon or dyes orally and intracolonly like enemas or colon irrigation for chronic colon diseases like constipation and tumor and irritable bowel syndrome and autoimmune diseases and that is why they forbid edta oral administration to not trap heavy metals in digestive tract

soap therapy is when someone washed the body with soap and sweat after that and were not sweat from before month and that means the strong soap like sulphur soap or edta or dmso with chlorine dioxide or edta with dmso will detox the skin surface and the deepest cells blockages like lipids and dust and nanoparticles and heavy metals deposits and and that increase sweat to excrete toxins and for detoxification

and tumor

sometimes when the human not change his clothes will not taken to dream different worlds as someone in summertime late night take off jacket and shirt from body and slept again and went to dream different worlds

absorption diseases from blocked cells with toxins like heavy metals as someone have constipation and difficult excretion and not absorp ingested solutions and intracolon solutions like from heavy metals poison specifically deposited in cells and cells blocked detoxifiers molecules help

memorize whole quran irreversible antidepressant forever

someone young hear heart beats from before years and have unknown brain diseases like repetitive forgetfulness and heart diseases from ongoing stealth acute lead poison and heavy metals poison and infections as people use edta

for heart and alzheimer and other unproven uses from fda

someone have heavy metals toxicity that caused dry mouth and drinked soda drink contain edta and lessen and exerted like petroleum mixed with water and means products contain edta for heavy metals toxicity

when use browser less bad than soical media applications like facebook and twitter and video platforms

after delivered water and wafer knoppers and i felt heavy heart and breath

when someone have dry mouth from drink sips poisoned water cg roxane contain arsenic and lead and uranium and bromoform and microplastics or dried street cannabis contain arsenic and lead and anticholinergics block fluids secretion factors and eased with green tea and multivitamins and glucose with citric acid and rice with and spices and hot sauce and wafer knoppers contain lipids

when central nervous system fast like helicopter flying upper head and that called mind over hair and when slow like being in heart and mind and other below organs

someone take theanine in morning and slept voluntarily easily in hours for hours and wake and slept again for hours and have clear dreams and helped memory remembrance like before years youth days before get country vaccines to travel to country and their infections and poisons and also helped excitatory diseases like muscles stiffness or agitation and high blood pressure as theanine inhibitory molecule glutamate blocker and relaxant

someone take cannabis dried flower unheated little part and inhibited somewhat and later have forgetfulness and excitatory diseases like agitation and anxiety more than before like some inhibitory drugs addiction augmentation diseases as some hurt their selves and as accelerated restless legs after some antipsychotics before and means

cannabis not desired long term inhibitory for most diseased people and have paradoxical effects or augmentation and also means when cannabis suitable for some healthy people it is utilize and increase inhibitory molecules production but in diseased people and means most inhibitory drugs and sophisticated substances like most psychoactives like dissociatives and depressants like cannabis are toxins strongly deplete liver molecules like fluids secretion factors molecules like neutralizers molecules like inhibitory molecules and cause liver toxicity or excitotoxicity like acetaminophen toxicity and as opioids agonists deplete opioid receptors activation supposed or requested effect yield end direct factors

acetylcholine deficiency and methylation deficiency symptoms hearable heart beats in ear as someone take choline bitartrate and not hear heart beats and means acetylcholine deficiency from liver disease not indefinitely produce and store conditional essential molecules like protein amino acids like methionine to produce choline and glycogen to have ptms molecules like acetylation like acetyl

coenzyme a and methylation like sam e or from blocked acetylcholine receptors and from ptms molecules like methylation deficiency as he take sam e before time and not hear heart beats and all that most times from toxins like ongoing stealth infections

acetylcholine deficiency symptoms diarrhea absence and vomiting absence and sweating absence and muscles contraction weakness and sometimes in addition to histamine deficiency

someone take delivered choline bitartrate with silicon dioxide and suspected poisons from the united states of america government and inhibited and slept early and have forgetfulness and means tartaric acid destroy choline effect and complicate preexist forgetfulness like unfriendly acids during disease like acetic acid and ascorbic acid and not like hydrochloric acid or citric acid or orotic acid and as sunflower lecithin not flooded softgels but pure powder improve memory soon and more with citric acid like from tomatos or choline bitartrate over time from intakes will

resolve like sometimes sugars cause initial forgetfulness but after multiple times improve memory and also means silicon dioxide cause potential forgetfulness and also means memory molecules like acetylcholine without factors like liver molecules like energy molecules and neutralizers molecules like protein and lipids and like essentials synthesis molecules like ptms molecules

gas or stool odorless most times from liver disease not produce enough neutralizers molecules like glucose like for systematic blood use or belly fluids like bile acids to generate fermentation gases by microbiota or not produce conditional essential amino acids or from inhibitory molecules deficiency like protein or gaba

someone take uridine and caused liver attacks like yeast extract and plant protein and sugar alcohol and increased palpitation and selective agitation like akathisia aggravators or belly muscles contractors and insomnia and absence seizures before sleep as liver try to synthesis sleep molecules and diseased liver will cause excitation like high

blood pressure and increase heart rate and agitation and half or absence seizures during sleep and sleep interrupts like from neutralizers deficiency

sex orgasm moments are short half life and long lasting mood stabilizer means if you thinking positive thoughts during orgasm you will be good after as neurotransmitters release is like some people who take antidepressant drugs like alprazolam they choose preferred mood like relax during administering and same to sex orgasm

excitatory molecules toxicity or agitation or dementia or anticholinergics or beta blockers or liver disease or insomnia or infections or intoxication or akathisia or diseases is man made

sudden palpitation episodes is for forcible more secreting fluids contain neutralizers as heart dried or irritated like allergy and also the same to alcohol flush and meaning deficient fluids or memory factors like neutralizers like

acetylcholine or glutathione or lipids like liquid lipids or steroids like cholesterol or estrogen deficiency or dementia all like from liver disease and will cause alcohol or caffeine or niacin which is cholesterol depleter or spices flush and palpitations and skin diseases like itch or acne and as someone when taking some drug like acetaminophen or uridine or spices will more likely to have liver pain and palpitation and dementia and itch and night absence seizures as liver busy for toxins not sleep factors and reversed with liver disease molecules like neutralizers molecules like nac and olive oil and steroids like estrogen or cholesterol from fish oil and honey

agmatine decrease cognitive during preexisting forgetfulness as calcium channels blockers block acetylcholine molecule effects that bounded to acetylcholine receptors

someone prepared calcium hypochlorite 73% 100mg in 1000ml water and added acetic acid 5% 1.5ml resulting in hypochlorous acid 75 ppm and from initial takes caused

mild horizontal lines in vision like from thermogenesis and increased electrogenesis or protein or retinoids or lecithin deficiency or dehydration and after days take uridine and felt liver attacks or liver toxicity and absence seizures like from retinoids and lipids and glutathione deficiency

someone following day prepared calcium hypochlorite 73% 100mg in 1000ml water and added acetic acid 5% 1.5ml resulting in hypochlorous acid 75 ppm and divided every 118ml to take every 20 minutes at once completing in three hours started on 5 pm and felt after couple parts mild tightness in heart and continued to take upcoming part and disappeared within minutes and reversed hypothermia and improved memory and energy and after hours during sleep felt palpitation and relieved with inhibitory energy molecule honey and next day after warm shower caused pain in old injury and after days without take caused joints pain episode and transient teeth pain like depleted residual inhibitory molecules already low from preexisting liver disease not produce enough glycine or agmatine and continuing that will restore liver function and lead to heal

and as if stopped taking that the ongoing infections will be activated again and elevating the abundant excitatory molecules ratio to already low inhibitory molecules means the excitatory molecules toxicity will exist most times in case oxidants or disinfectants insufficient use with preexisting infections or the body will reinfected again like first time and produce proteins for toleration and getting used as the old proteins depleted and like immunity acquirement or infections initial conditions and continuing after aforementioned caused joints pain episode and did not cause heart pain or severe sudden malnutrition episodes like from early ingested inhibitory energy molecule olive oil

abnormal muscles relaxation such as head muscles not contracted by vacuum like wise or firm humans and the vacuum contraction induced by selective thinking and meditation and selective stimulation and cough and vagus nerve stimulation and inhalation and full mouth chews and correct relaxation and during vacuum contraction the ears move and nose open but most times unnecessary and overact with correct thinking and diseases absence and the

abnormal muscles relaxation caused from malnutrition like sugars for acetylcholine production or diseases or overstimulation or wrongful thinking and sometimes cause hypothermia and rare cognitive abnormalities and have inverse relationship with intracranial pressure and as coldness cause muscles contraction and vibration for thermogenesis

drinked olive oil three sips next day after hypochlorous acid and transiently before waking completely felt nausea and heaviness especially in heart and agitation but lessen palpitation episodes as energy and if was less dose or honey and protein better

someone prepared calcium hypochlorite 73% 100mg in 500ml water and added acetic acid 5% 1.5ml resulting in hypochlorous acid 150 ppm and on 2 pm drinked first sip somewhat intolerated called agitation such as shocking events or taking spicy food and within minutes disappeared gradually and drinked more and tolerated without affects and started dividing every 50ml to take every 20 minutes at

once for completing in three hours but on 2:20 pm drinked 59ml tolerated without affects and on 2:40 pm drinked 118ml tolerated without affects and on 3 pm drinked the rest 177ml tolerated with transient mild tightness in heart and after hours mild scratchy throat and reversed high blood pressure and intracranial pressure and migraines and agitation and restlessness and hypothermia and mildly improved memory and already took before days inhibitory molecules such as olive oil and honey and protein and glycine and agmatine and also will still take after the drinking and will relieve scratchy throat too and by that inhibitory molecules or without them the drinking did not cause heart pain or severe sudden malnutrition episodes but next day caused palpitation episodes reversed with inhibitory molecules especially honey and irritation in anus like the body not absorbing 100mg but less and meaning low dose effective as high dose and about no heart pain and no severe sudden malnutrition episodes like the first time before months following waking up after taking unconverted manually calcium hypochlorite to hypochlorous acid before minutes from sleeping with preexisting malnutrition such as inhibitory molecules deficiency

الذي هو عاقل وشادد لعقله من الداخل يكاد أن يرفع حاجبيه أو المطمئن بالله أو الهادئ أو الخاشع أو المرتاح جسمه حامي مثل شارب الخمر أما المرتاح الشادد لجسمه بإسراف دون أن يعلم مثل المستعجل هادئ الجسم خارجيًا ومشدود داخليًا بإسراف أو الموسوس أو الناسي لنفسه أو الهارب المقسي عليه أو الخائف أو القاسي بعفوية أو المضغوط نفسيًا جسمه بارد

someone take sip from hydrogen peroxide 3% 1ml in about 240ml water and increased body temperature temporarily

movements diseases such as restless legs syndrome from toxins like infections like streptococcus or coronavirus or mycoplasma such as mycoplasma pneumoniae or tuberculosis or lyme disease or leprosy as taking nicotine with non selective dopamine agonist or taking hypochlorous acid or chlorine dioxide relieving anxiety and restless legs syndrome

after glycine and agmatine increased akathisia episodes and reversed with walking and vibration and coldness and el

monterey beef and bean cheese burritos

someone got infection and caused jaw pain and after days the unused teeth gum site breaked out pushing from new tooth growing in same jaw pain site conclusion infections can grow new tooth some speech like that

take olive oil and glycine 10g did not worked again immediately for agitation and high blood pressure and agmatine 500mg worked and followed day beets and beets juice for memory and agitation and high blood pressure and energy and may be also from corn desert

someone turned phone screen yellow with eye comfort mode and during browsing facebook felt less steadial bad stimulation that initiated since long years from facebook and definition for less steadial bad stimulation is less continual initiated since long time of affection or less fitnah or blowing mind or boredness or badness from spending long time recently in facebook and felt more fresh to

facebook like for first time and meaning changing phone screen color to different colors periodically or browsing application or device itself or person place like changing position in room or changing things around like furniture or lights colors like to blue color weeks per month or moving to other room or other place or changing clothes will prevent blowing mind accumulation that initiated since long time and will make anything feel fresh like first time and you what you believe
8 am 25 november 2025

ate snickers and rice with chicken and after hours my heart fluttering and increased blood pressure and heart beats and upper lip twitching and meaning most products compatible with toxins and infections already given to me like causing allergies like alpha gal syndrome or in general and mostly affecting all diseased or intentionally diseased causing blood vessels spasms like coronary spasms or depleting molecules like potassium already low like edta and if dead will be linked to food or was delivered or the tenants from the united states of america government downstairs using

usual radiation device

thinking sex releasing molecules and exciting person and stimulating nitric oxide production in penis and thinking sad calming person and releasing molecules and secreting tears and thinking angry releasing molecules and increasing blood pressure and heart beats and exciting person and remembering some good deeds releasing molecules with goosebumps and calming person and similar to reading book

olive oil and glycine stopped working immediately for agitation and high blood pressure and fast heart beats and used agmatine

ate delivered nutella sticks poisoned from the united states of america government and sudden sharp pain in belly multiple times and agitation and increased heart beats and defecting soften stool all that during hours exactly same before two years

glycine increase acetylcholine causing transient akathisia during waking and improving memory

pain in right arm followed with liver pain from excessive glutamate and low gaba and meaning most times pain in left hand from heart or brain stroke

ingested glycine and after waking transient akathisia for minutes back not appeared before days like from infections stimulating nervous system increasing some excitatory neurotransmitters as after minutes from waking disappeared and not meaning glycine increasing akathisia

taking some nutrients like minerals without other nutrients like lipids will never curing but worsing you will see in most diseases like in usual hidden acute malnutrition like from stimulants like toxins like infections overstimulating body which depleted inhibitory molecules and depleted neutralizers molecules both needing nutrients to replenishing but no nutrients intake will called malnutrition

and toxification like infections

someone take calcium hypochlorite and he felt strange and after hours normalized and he slept and woke up with mild difficulty breathing like previous days from infections or from prolonged urine retention causing tiredness or from severe malnutrition like sugars or food or potassium for hypokalemia as hypochlorous acid decreasing weight or from gases like from infections or chlorine continuously slowly released like from insufficient stomach acid slowly replenished and that gas accumulating lowering oxygen as not breathed out or no enough breathed oxygen for neutralizing as breathing inhibited and mouth closed and laying flat preventing gases exertion from respiratory tract and exerting gut gases from colon inhibited and calcium hypochlorite staying reacting in digestive tract as absorption inhibited during night as he took calcium hypochlorite before sleeping and continuing after woke up with mild difficulty breathing he urinated and during coughing there was inability coughing strongly initially like choking and he felt mild pain in my heart like chronically drinking

carbonated water like from gases stuck in the belly or heart more than oxygen like from elevated gases like not exerted from digestive tract like colon or respiratory tract or from insufficient oxygen as before days digestive tract gases elevated which also elevating systematic respiratory tract gases causing coughing and during coughing he felt tingling in heart as also during coughing the breathing in inhibited causing insufficient oxygen which allowing high other gases which is toxic and breathing out inhibited not exerting systematic respiratory tract toxic gases but digestive tract gases mostly and after coughed there was gut gases moving to be exerted which is the sign for elevated digestive tract gases before coughing and meaning inability to sneezing substituted with coughing as sneezing usually exerting toxic excessive gases as heart tingling before sneezing and relaxing after sneezing and also as another person she take calcium hypochlorite for first time have excessive gases in gut and continuing after breathing deeply the breathing difficulty improved and he prayed and laid flat for minutes or slept again and after minutes or hours from awaking he felt more breathing difficulty than before and weakness and hungriness all resolved with

eating burritos and sugars and water and all caused from malnutrition causing low sugars or low protein as calcium hypochlorite decreasing weight and he felt single episode same mild pain in heart during eating like from eating intensively when digestive tract full like with gases and food and no more pain in heart rest day and meaning hypochlorous acid will be more tolerated not like calcium hypochlorite need converting to hypochlorous acid which leaking chlorine gas during reacting

someone smell strange smell sometimes they poisoned me with radiating minerals or infections releasing gases like in gut or respiratory tract

someone left his head on his left arm muscles and his right side back like kidney hurt means arm muscles related to kidneys

heart pain or heart attack after hours from shower and after eating animals and that women heart attack after eating

from glycine deficiency and sugars deficiency as taking chocolate helping a lot

while leaving phone sharing wireless charging with another phone i was near with my hands and i felt fully stimulated and mildly shocking with electricity for seconds only from that ongoing shared electricity wirelessly means delirium patients or stupor or paranoid or delusional or intoxicated or schizophrenia or bipolar disorder or parkinson patients more vulnerable to radiation around like from deficiencies in skin protecting layers like not formed or partially formed both from modifications or no active molecules in cells or continuously passively transported or circulating protecting from energy waves or sources or electromagnetic broad spectrum and mechanical waves or it is just from eating wafer raised temporary hyperglycemia or contaminated with insects materials as it is was prolongedly exposed to air or sugars was cofactor for processing what i take before in the far morning administering almost like in fifteen minutes natural multivitamin from kaged brand two capsules results 100% daily value and b6 as p5p from swanson brand two

capsules results 80mg or 4706% daily value and iron as iron bisglycinate from nutrabio brand two capsules results 38mg or 200% daily value and lecithin as sunflower lecithin from microingredients brand three softgels results 4800mg and nicotine as quarter nicotine patch results 5mg and dopamine agonist as rotigotine 1mg patch and fulvic acid and chicken as patties as i felt after wafer with sugars warm and some cognitive improve after that and i slept without abnormally waking up early like from dopamine agonist alone and i wake up less sick or weak and restored cognitive and still improving even after three days and reversed fatigue or energy as like staying awake more without needing early sleep and all molecules suitable for akathisia which requiring select supplementing as less or almost no akathisia seen and unseen never anxiolytic for anxiety as almost no anxiety residuals like old oil preparation and adhd and depression and increasing alphabets or words or expressing intake or output but all or nicotine patch and non selective dopamine agonist patch either individually or both caused multiple sudden involuntary head jerks like cold jerks both called myoclonic jerks as stimulants aka sympathetic nervous system stimulants cause jerks and

nicotine and excitatory neurotransmitters like dopamine or dopamine agonist both is stimulants and like from more than three days administering high dose nicotine and non selective dopamine agonist combined and either or both in more high dose not chronically or chronically alone or with high blood pressure causing rls augmentation as i take high dose caffeine in green tea caused rls augmentation and small dose caffeine helped means taking very small dose from both stimulants or taking either alone like nicotine or non selective dopamine agonist and means sugars indispensable and initially may negatively appear like forgetfulness but after that getting used like several days will not cause forgetfulness like initially but improving cognitive and overall health as god permanently and firmly said honey is healing for men and all or most previously mentioned molecules for all disorders like nervous system disorders like neurological disorders like brain disorders like brain tumor and like neurodevelopmental disorders like autism and like neurodegenerative diseases like parkinson and like movements disorders like akathisia and restless legs syndrome and continuing after previously mentioned neurological disorders and like neuropsychiatric disorders

like anxiety disorders and like depression disorders and like delusions disorders like paranoia and psychosis like schizophrenia and bipolar disorder and like adhd and like sleep and wake disorders and fatigue and continuing after previously mentioned neuropsychiatric disorders and like energy disorders like fatigue and metabolic syndrome and diabetes and disabilities or all that was categorical test hhh and means high dopamine or dopamine agonist causing rls augmentation or arm pain or interrupting sleep multiple times or psychosis or excitement or negative symptoms need or demand nutrients or demand nutrients and acetylcholine agonist like nicotine or need just acetylcholine agonist like nicotine

i take ice cream and burning mouth syndrome disappeared as coldness induce accumulation of relieving or soothing or relaxing molecules like neurotransmitters and lipids like steroids and neutralizers in cells by drawing them to affected cells or letting cells reset by rest means ice bath for inflammation and autoimmune disorders and overall health

i take ionic minerals or fulvic acid and i felt cold like absorbing or processing or metabolizing molecules like transporter lecithin and vitamins like b6 and anemia molecules like minerals like iron and b6 and neutralizers molecules like steroids and hydrochloric acid decreased and giving that molecules for muscles diseases like cold and oxygen deficit

after prolonged stress my memory abnormally affected i take green tea and 4ml ionic minerals or fulvic acid acting like mood stabilizers as lithium mood stabilizer and mood stabilizers stabilizing new ideas thinking like its band in brain or level or frequencies or stabilizing making new decisions with its bases or information or core or relators while keeping gathered information present or realtime available and not suddenly interrupting pending thinking or reasoning or request like requested retrieving but respondent not mood stabilizers means it is just increasing or helping requests demand or making requests with their timeout or simply memory or reasoning retrieving requests and until now my memory still affected need natural

multivitamin and b6 and iron and agonizing antagonized dopamine and or dopamine substrates and sleep hormones which repair and acetylcholine substrates like lecithin and steroids like cortisol and testosterone and estrogen and progesterone and protein and insomnia and waking up early and akathisia returned like after antipsychotics and st john wort which increasing metabolizing body molecules like hormones means these molecules related to akathisia as antipsychotics stop producing substances or producing defective substances and remaining normal substances utilized and shortly symptoms appear

someone wake up tired and very sick or weakness like in chest and belly and lower body and not wish to live and after minutes he feel less tired means the transmitters or neurotransmitters increased in chest and belly and lower body means autoimmune diseases like multiple sclerosis and akathisia and parkinson worsing by neurotransmitters diseases or imbalance like high glutamate and noradrenaline which increase after hours from waking as multiple sclerosis worsening in the evening means

neurotransmitters for weakness and sickness

water retention and constipation from mixing benadryl and antacids like pepcid and omeprazole and no protein قبل سنتين

stopping sex after months from doing that daily like stopping cocaine cause needing to do that or cravings or withdrawal symptoms like agitation or dependence

طبخ لحسة مع ملعقة مايونيز ويظن زبدة وظن عنده إمساك وما يتبول يمكن من benadryl و pepcid و ppi ولما أكل عرق وسمع صوت ماء ينزل من القلب كأنه كان به ماء حوله fluid retention يمكن من الكوليسترول من البيض والزبدة وما كمل

استيقظ خير بعد ما أخذ أمس nicotine 21 mg لصقة لكن ما حطها ٢٤ ساعة إلا ثمان ساعات يظن أخذ منها 10mg أو أكثر مثل 20mg لأنه مرض أمس إرتفع ضغطه ولما يحط لصقة 5mg مايقع شيء

i take premier ph ionic minerals and nicotine and the old

sore site reconstructed

واحد استخدم كريم اليكا وفازلين ونشأ للأكزيميا ونفع

لصق ربع لصقة نيكوتين حوالي ٥ مج نيكوتين بالعصر يظن قلل akathisia قليلا وبالليل ارتفع الضغط ونام متأخر ويظن بعد أيام زاد akathisia قليلا وحسن الدماغ

أكل أقراص دجاج قل burning mouth ينفع له مواد مختلفة بالطعم

i read during menopause itself, hormone levels are dropping dramatically. In postmenopause, these low hormone levels are sustained,
give new names for those two diseases easy to understand i thought first for menopause menopausing and for postmenopause deployedmenopause or menopaused or stablemenopaused

شعر بالحمى لأول مرة والتهاب باللثة والشفايف وقبلها باليوم نفسه كان يستمني وحاول واحد يدخل وقام منعه بالصراخ يعني فجعه ورجع وقاطعه مرة أخرى لأجل يجاوب

واحد وجاوب الواحد هذا خمس دقائق وهو منقطع عن الإستمناء وتصايح مرة ثانية مع الأول ورجع يستمني واغتسل بماء حار وبعد ساعات أكلوا رز وشطة وبعده بوريتو ملاهب

قد يكون إرتفاع المواد مثل الدوبامين أثناء الإستمناء والأدرينالين أثناء الفجيعة يكسرو قيد الريسبتورات المغلقة كاللسعة والوخز لهن فوائد

وشعر مرة ثانية بعد النيكوتين

صباعه الشمال طلع منها كتلة وجلس يبعد منها كل يوم وأخر يوم حاول يقلع ظفره لمدة نصف ساعة وكان يظهر قليل ألم وبعد أيام إكتشف لم يعد ينموا لعل قطع الكتلة والتسبب بالألم بالأماكن المجاورة يفيد الورم

وبعدما حاولت أقلع ظفري غمست رجلي بماء ومبيض

أو القولون العصبي عدوى اليوم كان راقد ويحلم irritable bowel syndrome بحلم عصبي قام والحشرة بإيده تقرصه and meaning dreaming world allowing us to see body functions like nervous system stimulation visually when stimulated

أحدهم يقول يوم أخذ 5htp gummies بعدما خرجوه من المستشفى ولما كان يأتي يرقد أو لما يستيقظ فجأة بنص الليل أو بالنهار كان يشعر بالأفكار مرفوعة صوتها قوية ثابتة كأنها تطغي وما يوقفها إلا بصعوبة كان نصفه نائم يتخيل مثل تجربة الأحلام لا إرادية ونصفه مستيقظ فقد يكون إرتفع السيروتونين على الدوبامين أو لايوجد

رسبتورات دوبامين فعالة أو صحية إما أنه رسبتور معطل بمادة أو تالف بحالة لا يتفعل وهنا قد يكون زيادة الدوبامين و أو إعطاء مفعل دوبامين غير محدد ولما أخذ روتيجوتاين قلت الأفكار الغير مرغوبة بعقله أو السبب الثاني إرتفاع وتفعيل رسبتور سيروتونين معين على الأخر المعطل أو التالف بحالة
تعطيل رسبتور سيروتونين قد يزيد أزيد ولكن تفعيلهن وتفعيل الدوبامين كله ينظمه
أو تعطيل السيروتونين فقط دون الدوبامين
أو تعطيل الدوبامين فقط دون السيروتونين
أو تفعيلهن كلهن

الجواب

the answer
5htp increased serotonin and that excitatory and increased excitation cause hallucinations same common stimulants

note
some molecules work selective excitatory molecule in place and selective inhibitory molecule in place so that stimulant and depressant in same time like alcohol

someone take rotigotine and slept and shortly wake up that repeated all the night and did not treated akathisia or may be worsen it and second time less sleep disturbances and

pain and heaviness in the arm appear to be less with time

acupuncture for sleepiness panic attacks depression ptsd anxiety derealization memory cry but it may affect heart low blood pressure coma does puncture like stroke but it is not for humans or may be one time per month may be substitute hijama

أحيانًا أخذ بسباس capsaicin وهدأ akathisia شوية

أخذ بسباس capsaicin وشعر جسده أخف من التعب للعضلات وأنشط فقد ينفع exercise intolerance وقد يكون من hmb ولا يظن

أخذ hmb وأحس مثل acids

protein
raw honey
calcium
for red semen

i took jocko molk protein shake sam e natural multivitamin iron b6

sam e lowered heart beating in the ears

umami
msg
yeast

sam e make breathing like green tea ingestion
asthma

شرب st john wort حس نفسه أسرع جسديا وأخف النفس athletes ويظن زاد قليلا akathisia restless legs

hydrochloric acid betaine laxative like vitamin c
may be with enzymes

مواد بكل الأمراض

عندما أخذ محتوى الحبة مرة واحدة لأنه كالزيوت restless يظن زاد lecithin
الأخرى بطيء ينفع
protein
b6
natural multivitamin

there is cream and some in butter and milk shakes like nesquick nutrients improve memory may be lipids or their gums like gellan gum help body like saliva or cholesterol or calcium and carbonate and bicarbonate and cholecalciferol

summary

lipids

examples

monodiglycerides
diglycerides
lecithin
free fatty acids

same lecithin memory improvement

lipids are primary energy source

when human awake days their memory decreased like from energy deficiency

carbohydrates

lipids and carbohydrates have inseparable effects like lipids give triglycerides and carbohydrates give energy or glycerol that is used for triglycerides utilization produce diglycerides and they are universal precursors for lipids production such as phospholipids and sphingolipids

before days someone stay take vitamin b6 and wafer brand knoppers contain lipids and sugars improved memory over

time but not assume iron

أخذ glucose shot كان أخف من السكر بالنسيان وكنصف choline

شرب واحد وأحس مفصله hibiscus tea depleting bone marrow

الكوليسترول منشط أكثر من الكافيين

someone heart hold them and did massage and it relaxed and also take curry capsaicin and sugar

يوجد في cream و قليل في butter والحليب nesquick مواد memory قد تكون lipids أو gellan gum أنه ينفع body يعمل كاللعاب or calcium and carbonate and bicarbonate and cholecalciferol or lipids like cholesterol and gums and they akathisia aggravators

minerals
magnesium
iron
sunshine
choline
luteolin
gases production
nitric oxide
ensure couple days effect
lipids synthesis during sleep
steroids

not
calcium
carbonate
pantothenic acid excitatory
vitamin a worsen excitatory
chlorine dioxide mild excitatory with spices induce insomnia
vitamin d instantly 600% worsen excitatory
glutamate excitatory induce forgetfulness
cyanocobalamin transient inhibitory

lipids inhibitory
magnesium relaxed muscles potently inhibitory
cyanocobalamin elevated dose transient excitatory and after sleep shown inhibitory effects as calmed high blood pressure and muscles overexcitation somewhat

ensure
glutamate blockers
whole body muscles overexcitation relax
respiratory muscles contraction increased
nutrients delivery enhanced
oxygen delivery enhanced
brain muscles contraction concentrated
memory increased

lecithin
brain muscles contraction primary factors like acetylcholine increased
increase other body muscles contraction
energy molecules
lipids

vitamin c forgetfulness depleted

processed food depleted

phospholipids

summary

lipids

i take calcium hypochlorite and i felt strange and after hours normalized and i slept and woke up with mild difficulty breathing like previous days from infections or from prolonged urine retention causing tiredness or from severe malnutrition like sugars or food or potassium for hypokalemia as hypochlorous acid decreasing weight or from gases like from infections or chlorine continuously slowly released like from insufficient stomach acid slowly replenished and that gas accumulating lowering oxygen as not breathed out or no enough breathed oxygen for neutralizing as breathing inhibited and mouth closed and laying flat preventing gases exertion from respiratory tract and exerting gut gases from colon inhibited and calcium hypochlorite staying reacting in digestive tract as absorption inhibited during night as i took calcium hypochlorite before sleeping and continuing after woke up with mild difficulty breathing i urinated and during coughing there was inability coughing strongly initially like choking and i felt mild pain in

my heart like chronically drinking carbonated water like from gases stuck in the belly or heart more than oxygen like from elevated gases like not exerted from digestive tract like colon or respiratory tract or from insufficient oxygen as before days digestive tract gases elevated which also elevating systematic respiratory tract gases causing coughing and during coughing i felt tingling in heart as also during coughing the breathing in inhibited causing insufficient oxygen which allowing high other gases which is toxic and breathing out inhibited not exerting systematic respiratory tract toxic gases but digestive tract gases mostly and after coughed there was gut gases moving to be exerted which is the sign for elevated digestive tract gases before coughing and meaning inability to sneezing substituted with coughing as sneezing usually exerting toxic excessive gases as heart tingling before sneezing and relaxing after sneezing and also as who take calcium hypochlorite for first time have excessive gases in gut and continuing after breathing deeply the breathing difficulty improved and i prayed and laid flat for minutes or slept again and after minutes or hours from awaking i felt more breathing difficulty than before and weakness and

hungriness all resolved with eating burritos and sugars and water and all caused from malnutrition causing low sugars or low protein as calcium hypochlorite decreasing weight and i felt single episode same mild pain in heart during eating like from eating intensively when digestive tract full like with gases and food and no more pain in heart rest day and meaning hypochlorous acid will be more tolerated not like calcium hypochlorite need converting to hypochlorous acid which leaking chlorine gas during reacting

i wake up tired and very sick or weakness like in chest and belly and lower body and no wish to live and after minutes i feel less tired means the transmitters or neurotransmitters increased in chest and belly and lower body means autoimmune diseases like multiple sclerosis and akathisia and parkinson worsing by neurotransmitters diseases or imbalance like high glutamate and noradrenaline which increase after hours from waking as multiple sclerosis worsening in the evening means neurotransmitters for weakness and sickness

while leaving phone sharing wireless charging with another phone i was near with my hands and i felt fully stimulated and mildly shocking with electricity and semi dissociated from reality for seconds only from that ongoing shared electricity wirelessly means delirium patients or stupor or paranoid or delusional or intoxicated or schizophrenia or bipolar disorder or parkinson patients more vulnerable to radiation around like from deficiencies in skin protecting layers like not formed or partially formed both from modifications or no active molecules in cells or continuously passively transported or circulating protecting from energy waves or sources or electromagnetic broad spectrum and mechanical waves or it is just from eating wafer raised temporary hyperglycemia or contaminated with insects materials as it is was prolongedly exposed to air or sugars was cofactor for processing what i take before in the far morning administering almost like in fifteen minutes natural multivitamin from kaged brand two capsules results 100% daily value and b6 as p5p from swanson brand two capsules results 80mg or 4706% daily value and iron as iron bisglycinate from nutrabio brand two capsules results 38mg or 200% daily value and lecithin as sunflower lecithin from

microingredients brand three softgels results 4800mg and nicotine as quarter nicotine patch results 5mg and dopamine agonist as rotigotine 1mg patch and fulvic acid and chicken as patties as i felt after wafer with sugars warm and some cognitive improve after that and i slept without abnormally waking up early like from dopamine agonist alone and i wake up less sick or weak and restored cognitive and still improving even after three days and reversed fatigue or energy as like staying awake more without needing early sleep and all molecules suitable for akathisia which requiring select supplementing as less or almost no akathisia seen and unseen never anxiolytic for anxiety as almost no anxiety residuals like old oil preparation and adhd and depression and increasing alphabets or words or expressing intake or output but all or nicotine patch and non selective dopamine agonist patch either individually or both caused multiple sudden involuntary head jerks like cold jerks both called myoclonic jerks as stimulants aka sympathetic nervous system stimulants cause jerks and nicotine and excitatory neurotransmitters like dopamine or dopamine agonist both is stimulants and like from more than three days administering high dose nicotine and non

selective dopamine agonist combined and either or both in more high dose not chronically or chronically alone or with high blood pressure causing rls augmentation as i take high dose caffeine in green tea caused rls augmentation and small dose caffeine helped means taking very small dose from both stimulants or taking either alone like nicotine or non selective dopamine agonist and means sugars indispensable and initially may negatively appear like forgetfulness but after that getting used like several days will not cause forgetfulness like initially but improving cognitive and overall health as god permanently and firmly said honey is healing for men and all or most previously mentioned molecules for all disorders like nervous system disorders like neurological disorders like brain disorders like brain tumor and like neurodevelopmental disorders like autism and like neurodegenerative diseases like parkinson and like movements disorders like akathisia and restless legs syndrome and continuing after previously mentioned neurological disorders and like neuropsychiatric disorders like anxiety disorders and like depression disorders and like delusions disorders like paranoia and psychosis like schizophrenia and bipolar disorder and like adhd and like

sleep and wake disorders and fatigue and continuing after previously mentioned neuropsychiatric disorders and like energy disorders like fatigue and metabolic syndrome and diabetes and disabilities or all that was categorical test hhh and means high dopamine or dopamine agonist causing rls augmentation or arm pain or interrupting sleep multiple times or psychosis or excitement or negative symptoms need or demand nutrients or demand nutrients and acetylcholine agonist like nicotine or need just acetylcholine agonist like nicotine

while leaving phone sharing wireless charging with another phone i was near with my hands and i felt fully stimulated and mildly shocking with electricity and semi dissociated from reality for seconds only from that ongoing shared electricity wirelessly means delirium patients or stupor or paranoid or delusional or intoxicated or schizophrenia or bipolar disorder or parkinson patients more vulnerable to radiation around like from deficiencies in skin protecting layers like not formed or partially formed both from modifications or no active molecules in cells or

continuously passively transported or circulating protecting from energy waves or sources or electromagnetic broad spectrum and mechanical waves or it is just from eating wafer raised temporary hyperglycemia or contaminated with insects materials as it is was prolongedly exposed to air or sugars was cofactor for processing what i take before in the far morning administering almost like in fifteen minutes natural multivitamin from kaged brand two capsules results 100% daily value and b6 as p5p from swanson brand two capsules results 80mg or 4706% daily value and iron as iron bisglycinate from nutrabio brand two capsules results 38mg or 200% daily value and lecithin as sunflower lecithin from microingredients brand three softgels results 4800mg and nicotine as quarter nicotine patch results 5mg and dopamine agonist as rotigotine 1mg patch and fulvic acid and chicken as patties as i felt after wafer with sugars warm and some cognitive improve after that and i slept without abnormally waking up early like from dopamine agonist alone and i wake up less sick or weak and restored cognitive and still improving even after three days and reversed fatigue or energy as like staying awake more without needing early sleep and all molecules suitable for akathisia

which requiring select supplementing as less or almost no akathisia seen and unseen never anxiolytic for anxiety as almost no anxiety residuals like old oil preparation and adhd and depression and increasing alphabets or words or expressing intake or output but caused seizure like or stroke or prestroke as mild shock in brain with involuntary head movement like from more than three days administering high dose nicotine and non selective dopamine agonist combined and either or both in more high dose not chronically or chronically alone or with high blood pressure causing rls augmentation as i take high dose caffeine in green tea caused rls augmentation and small dose caffeine helped means taking either alone nicotine or non selective dopamine agonist and means sugars indispensable and initially may negatively appear like forgetfulness but after that getting used like several days will not cause forgetfulness like initially but improving cognitive and overall health as god permanently and firmly said honey is healing for men and all or most previously mentioned molecules for all disorders like nervous system disorders like neurological disorders like brain disorders like brain tumor and like neurodevelopmental disorders like autism

and like neurodegenerative diseases like parkinson and like movements disorders like akathisia and restless legs syndrome and continuing after previously mentioned neurological disorders and like neuropsychiatric disorders like anxiety disorders and like depression disorders and like delusions disorders like paranoia and psychosis like schizophrenia and bipolar disorder and like adhd and like sleep and wake disorders and fatigue and continuing after previously mentioned neuropsychiatric disorders and like energy disorders like fatigue and metabolic syndrome and diabetes and disabilities or all that was categorical test hhh and means high dopamine or dopamine agonist causing rls augmentation or arm pain or interrupting sleep multiple times or psychosis or excitement or negative symptoms need or demand nutrients or demand nutrients and acetylcholine agonist like nicotine or need just acetylcholine agonist like nicotine
